User's Manual

Multimedia Matrix Switcher

MMX2-4x3-H20
MMX2-4x1-H20

v1.1 09-05-2022
Important Safety Instructions

Class II apparatus construction.
The equipment should be operated only from the power source indicated on the product.

To disconnect the equipment safely from power, remove the power cord from the rear of the equipment or from the power source. The MAINS plug is used as the disconnect device, the disconnect device shall remain readily operable.

There are no user-serviceable parts inside of the unit. Removal of the cover will expose dangerous voltages. To avoid personal injury, do not remove the cover. Do not operate the unit without the cover installed.

The appliance must be safely connected to multimedia systems. Follow instructions described in this manual.

Ventilation
For the correct ventilation and to avoid overheating, ensure enough free space around the appliance. Do not cover the appliance, leave the ventilation holes free and never block or bypass the ventilators (if there are any).

WARNING
To prevent injury, the apparatus is recommended to be securely attach to the floor/wall, or mounted in accordance with the installation instructions. The apparatus shall not be exposed to dripping or splashing, and no objects filled with liquids, such as vases, shall be placed on the apparatus. No naked flame sources, such as lit candles, should be placed on the apparatus.

Waste Electrical & Electronic Equipment WEEE

This marking shown on the product or its literature, indicates that it should not be disposed with other household wastes at the end of its working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate this from other types of wastes and recycle it responsibly to promote the sustainable reuse of material resources. Household users should contact either the retailer where they purchased this product, or their local government office for details of where and how they can take this item for environmentally safe recycling. Business users should contact their supplier and check the terms and conditions of the purchase contract. This product should not be mixed with other commercial wastes for disposal.

CAUTION
The device contains a BR1632A button battery, which supplies power to the clock when the device is not powered on. Danger of explosion if battery is replaced incorrectly. Replace only with the same or equivalent type.

WARNING
Do not ingest the battery. Chemical Burn Hazard. This product contains a coin/button cell battery. If the coin/button cell battery is swallowed, it can cause severe internal burns in just 2 hours, and can lead to death. Keep new and used batteries away from children. If the battery compartment does not close securely, stop using the product and keep it away from children. If you think batteries might have been swallowed or placed inside any part of the body, seek immediate medical attention.

Symbol Legend

The following symbols and markings are used in the document:

WARNING! Safety-related information that is highly recommended to read and keep in every case!

ATTENTION! Useful information for performing a successful procedure; it is recommended to read.

DIFFERENCE: Feature or function that is available with a specific firmware/hardware version or product variant.

INFO: A notice, which may contain additional information. Procedure can be successful without reading it.

DEFINITION: The short description of a feature or a function.

TIPS AND TRICKS: Ideas that you may have not known yet, but can be useful.

Navigation Buttons

Go back to the previous page. If you clicked on a link previously, you can go back to the source page by pressing the button.

Navigate to the Table of Contents.

Step back one page.

Step forward to the next page.

Document Information

All presented functions refer to the indicated products. The descriptions have been made while testing these functions in accordance with the indicated Hardware/Firmware/Software environment:

<table>

Document revision: v1.1
Release date: 09-05-2022
Editor: Laszlo Zsedenyi

About Printing

Lightware Visual Engineering supports green technologies and eco-friendly mentality. Thus, this document is made for primarily digital usage. If you need to print out a few pages for any reason, follow the recommended printing settings:

- Page size: A4
- Output size: Fit to page or Match page size
- Orientation: Landscape

TIPS AND TRICKS: Thanks to the size of the original page, a border around the content (gray on the second picture below) makes it possible to organize the pages better. After punching holes in the printed pages, they can be easily placed into a ring folder.

Hashtag (#) Keywords in the Document

This user's manual contains keywords with hashtags (#) to help you find the relevant information as quick as possible.

The format of the keywords is the following:

#<keyword>

The usage of the keywords: use the Search function (Ctrl+F / Cmd+F) of your PDF reader application, type the # (hashtag) character and the wished keyword.

The #new special keyword indicates a new feature/function that has just appeared in the latest firmware or software version.

Example

#dhcp

This keyword is placed at the DHCP setting command in the LW3 Programmer's reference section.

Example

#new

This keyword is placed at the DHCP setting command in the LW3 Programmer's reference section.

Introduction

Thank you for choosing Lightware's MMX2-series devices. In the first chapter we would like to introduce the device, highlighting the most important features in the sections listed below:

- Description
- Box Contents
- Features of the Device
- Model Comparison
- Typical Application
1. Introduction

MM X2 series – User’s Manual

1.1. Description

MMX2 series devices is a uniquely mini size matrix switcher. It has four HDMI inputs and HDMI output(s). Audio can be de-embedded from the HDMI signal to a balanced 5-pole Phoenix (Euroblock) port. The volume and gain properties of the audio signal can be modified at the analog audio output port. The unit is HDMI 2.0 compatible by supporting 4K@60Hz signals at 4:4:4 subsampling and supporting HDCP v2.2.

The devices contain General Purpose Input/Output (GPIO) ports with 6+2 pins for connecting third-party devices and a built-in Occupancy Sensor (OCS) which also gains the usage of automatic functions. Further control options are served by the RS-232, IR (in and out) and Ethernet ports.

Model Denomination

- 4x video inputs
- Analog audio output support
- HDMI 2.0 compatibility
- 3x video outputs

About the Serial Number

Lightware devices contain a label indicating the unique serial number of the product. The structure is the following:

- A=2020
- B=2021
- C=2022
- D=2023
- E=2024
- F=2025
- 6-digit running sequence number

Month of the manufacturing:
- 1: Jan
- 2: Feb
- 3: Mar
- 4: Apr
- 5: May
- 6: Jun
- 7: Jul
- 8: Aug
- 9: Sep
- A: Oct
- B: Nov
- C: Dec

Year of the manufacturing:
- (A-Y)
- A=2020
- B=2021
- C=2022
- D=2023
- E=2024
- F=2025

1.3. Features of the Device

Common Features

3D and 4K Support
High bandwidth allows extension of resolutions up to 4K and even 3D sources and displays are supported.

Pixel Accurate Reclocking
Each output has a clean, jitter free signal, eliminating signal instability and distortion caused by long cables or connector reflections.

Frame Detector and Signal Analysis
The exact video and audio signal format can be determined such as timing, frequencies, scan mode, HDCP encryption, color range, color space and audio sample rate.

Auto-select Function for Video Inputs
The Auto-select feature can sense the port status on the video input and select them automatically. Priority number can be set for each input port, and the feature allows to set various modes for the automatic input selection (First detect, Last detect).

De-embedder Function
The analog audio can be de-embedded from HDMI inputs and it can be routed to the analog audio output.

HDCP-compliant
The switcher fulfills the HDCP standard. HDCP capability on the digital video inputs can be disabled when non-protected content is used.

Dark Mode*
All illuminating elements of the front/rear panel can be switched on and off. This feature is useful in live-stage shows or other environments where flashing LEDs would be distracting.

Ethernet Control
Multiple simultaneous TCP/IP connections are available with a simple ASCII-based protocol for controlling or configuring the product, or to perform a firmware update.

Basic IT-security*
These entry-level network security improvements help prevent unauthorized access to the Lightware device; HTTPS/WSS support, basic network authentication.

Bi-directional RS-232*
AV systems can also contain serial port controllers and controlled devices. Serial transmission supports any unit that works with standard RS-232.

GPIO Control Port
Six GPIO pins operating at TTL digital signal levels that can be controlled with LW3 commands. 5V is supplied over the 7th pin constantly, up to 500 mA.

Occupancy Sensor Connector
Occupancy sensor connection (with 24V power supply).

Lightware Rest API*
The switcher can be controlled through standard HTTP(S) requests to ensure the control functions from REST clients or terminal program.

Consumer Electronics Control**
The device supports transmitting standard CEC commands in order to remote control the connected sink device.

* These functions are available from FW package v1.2.0.
** This function is available from FW package v1.4.0b4.

1. Introduction

MMX2-4x3-HC20

Applied firmware package: v1.4.0b4 | LDC software: v2.5.17b2
2. Product Overview

The following sections are about the physical structure of the device, input/output ports and connectors:

- Front View
- Rear View
- Button Functionality
- Status LEDs
2.1. Front View

MMX2-4x3-H20

1. Configurable Ethernet Port
   RJ45 connector for configurable 100Base-T Ethernet communication.

2. USB-A Port
   The firmware update function will be added by a future firmware update.

3. USB mini-B Port
   The LW3 control function will be added by a future firmware update.

4. Input Select Buttons
   For more details, see the Button Functionality section. When LEDs blink green three times after pressing the button, they show that the front panel lock is enabled.

5. Video Input Status LEDs
   See the details in the Video LEDs section.

6. HDMI Input Ports
   HDMI input ports for sources. The applied cable shall not be longer than 5m. Use cables certified for HDMI 2.0 (3x6Gbps) applications.

MMX2-4x1-H20

2.2. Rear View

MMX2-4x3-H20

1. DC Input
   5V DC input for local power supply. Connect the adaptor to the 2-pole Phoenix® connector.

2. HDMI Output Ports
   HDMI output ports for connecting sink devices.

3. Video Output Status LEDs
   See the details in the Video LEDs section.

4. Analog audio port
   5-pole Phoenix® connector for balanced analog audio output signal. The signal is de-embedded from the selected video signal.

5. RS-232 port
   3-pole Phoenix connector for bi-directional RS-232 communication.

6. OCS sensor connector
   3-pole Phoenix® connector (male) for connecting an occupancy sensor. The port provides 24V output voltage (50mA), see the details in the OCS Connector section. WARNING! Not compatible with the GPIO connector!

7. GPIO
   8-pole Phoenix® connector for configurable general purpose. Max. input/output voltage is 5V, see the details in the GPIO - General Purpose Input/Output Ports section. WARNING! Not compatible with the OCS connector!

8. Secure Control LAN
   RJ45 connector for configurable 100Base-T Ethernet communication.

9. Utility AV LAN
   RJ45 connector provides room utility Ethernet connection for e.g. BYOD laptops.

WARNING! Always use the supplied power supply. Warranty void if damage occurs due to use of a different power source.
2. Product Overview

2.3. Button Functionality

INFO: If the control lock is enabled and a button is pressed, front panel LEDs blink 3 times quickly.

2.3.1. Video Source Selection

MMX2-4x1-H20

Use the IN1-IN4 buttons to select the video source to the HDMI output.

MMX2-4x3-H20

Use OUT1-OUT3 buttons to select the video source. Each button selects the desired input to that output. The sequence is the following (both for the video and audio switching):

Use AUDIO OUT button to set the audio source of the analog audio output.

2.3.2. Enable DHCP IP Address

The device has a dynamic IP address as a factory default setting. If this setting does not fit the circumstances during install or usage, DHCP can be enabled from the front panel:

Step 1. Make sure the device is powered on and operational.

Step 2. Press and keep pressing the AUDIO OUT button for 5 seconds (IN4 button at MMX2-4x1-H20 model).

Step 3. After 5 seconds front panel LEDs start blinking; release the button and press it 3 times again quickly (within 3 seconds).

Step 4. The LEDs get dark, DHCP gets enabled.

2.3.3. Reset to Factory Default Settings

To restore factory default values, do the following steps:

Step 1. Make sure the device is powered on and operational.

Step 2. Press and keep pressing the AUDIO OUT button for 10 seconds (IN4 button at MMX2-4x1-H20 model).

Step 3. After 5 seconds the front panel LEDs start blinking but keep on pressing the button.

Step 4. After 10 seconds the LEDs start blinking faster; release the button and press it 3 times again quickly (within 3 seconds).

Step 5. The LEDs get dark, the device restores the factory default settings and reboots.

Factory default settings are listed in the Factory Default Settings section.

2.3.4. Control Lock

Press the first and fourth buttons together (within 100 ms) to disable/enable front panel buttons:

- IN1 and IN4 buttons in MMX2-4x1-H20 model
- VIDEO OUT1 and AUDIO OUT buttons in MMX2-4x3-H20 model

Front panel LEDs blink 4 times when locking/unlocking. If the control lock is enabled and a button is pressed, front panel LEDs blink 3 times quickly.

2.4. Status LEDs

INFO: When Dark mode is enabled, no LEDs are lit, even though the device is fully functional. For more details about the dark mode, see the Status section.

2.4.1. Video LEDs

2.4.2. Ethernet Status LEDs

<table>

Installation

This chapter is about the installation of the device and connecting to other appliances, presenting also the mounting options and further assembly steps.

- Mounting Options
- Electrical Connections
- Connecting Steps
3.1. Mounting Options

To mount the switcher, Lightware supplies optional accessories for different usage. There are two kinds of mounting kits with a similar fixing method. The switcher has two mounting holes with inner thread on the bottom side; see the bottom view in the Mechanical Drawings section. To order mounting accessories, please contact sales@lightware.com. Fasten the device with the screws enclosed to the accessory.

**WARNING!** Always use the supplied screws. Using different (e.g. longer) ones may cause damage to the device.

3.1.1. 1U High Rack Shelf

Allows rack mounting for half-rack, quarter-rack and pocket sized units.

1U high rack shelf provides mounting holes for fastening two half-rack or four quarter-rack sized units. Pocket-sized devices can also be fastened to the shelf.

**WARNING!** Using different (e.g. longer) screws may cause damage to the device.

**INFO:** The device is half-rack sized.

3.1.2. Mounting with UD Kit-double

The below example demonstrates the application of UD Kit double accessory:
3.2. Electrical Connections

3.2.1. HDMI Input and Output Ports
The MMX2 series switchers are assembled with standard 19-pole HDMI connectors with screw lock for inputs and outputs. Always use high quality HDMI cable for connecting sources and displays.

3.2.2. USB Connectors

USB Type-A
Reserved for future developments.

USB Mini B-Type
The connector is used for service functions.

3.2.3. RS-232 Connector
The switcher contains a 3-pole Phoenix connector, which is used for RS-232 serial connection.

<table>

RS-232 connector pin assignments

RS-232 Output Voltage Levels
- Logic low level: 3V .. 15V
- Logic high level: -15V .. -3V

Compatible Plug Type
Phoenix® Combicon series (3.5mm pitch, 3-pole), type: MC 1.5/3-ST-3.5.
You can find more information about RS-232 in the Serial Interface section.

3.2.4. Analog Stereo Audio
5-pole Phoenix connector is used for balanced analog audio output. Unbalanced audio device can be connected as well. See more details about the balanced and unbalanced output port wiring in the Cable Wiring Guide section.

<table>

Analog audio connector and plug pin assignments

Compatible Plug Type
Phoenix® Combicon series (3.5mm pitch, 5-pole), type: MC 1.5/5-ST-3.5.

3.2.5. Secure Control LAN, Utility AV LAN, Configurable Ethernet Port
The switcher contains an RJ-45 connector for 100Mbit Ethernet/LAN connection for local control functions.
The Ethernet ports can be connected to a LAN hub, switch or router by a CATx cable. Even though both cable types (straight or cross) are supported and handled by the device, the pin assignment below is recommended.

Wiring of LAN Cables
Lightware recommends the termination of LAN cables on the basis of TIA/EIA T 568 A or TIA/EIA T 568 B standards.

<table>
<thead>
<tr>
<th>Pin</th>

<tr>
<td>8</td>
<td>brown</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
3.2.6. OCS Connector

The switcher is supplied with a 3.81mm 3-pole 90° Reversed Gender Plug Phoenix® connector, which is used for connecting an occupancy sensor.

The first pin is a 24V logic input. The default state is high. Different type of sensors exist: some send high level, some send low level to this input when the room is occupied. Active-high or active-low logic can be configured for this port in LDC to support them.

The second pin has a constant 24V output voltage, and the third one is the ground.

<table>
<thead>
<tr>
<th>Pin nr.</th>
<th>Level and direction</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>24V logic input</td>
</tr>
<tr>
<td>2</td>
<td>24V</td>
</tr>
<tr>
<td>3</td>
<td>Ground</td>
</tr>
</tbody>
</table>

**OCS connector pin assignments**

Voltage ranges for 1st pin are the following:

<table>
<thead>
<tr>
<th>Input voltage [V]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Logic low level</td>
</tr>
<tr>
<td>0 - 0.8</td>
</tr>
<tr>
<td>Logic high level</td>
</tr>
<tr>
<td>2V - 24V</td>
</tr>
</tbody>
</table>

**OCS Output Voltage Level**: 24V (50mA).

Pull-up resistor is integrated on the input. Works automatically with open-drain type sensors. Requires an external 1kΩ pull-down resistor between input and ground pins when used with active-high type sensors.

In case of applying Leviton OCS (https://www.leviton.com/en/products/osc10-m0w), supplying a 1 kΩm external resistor between the 1st and the 3rd pins is necessary – see the example in the OCS Sensor section.

**Compatible Plug Type**

WR-TBL series (3.81mm 3-pole 90° Reversed Gender Plug Phoenix), type: WR-TBL Series 3483 - 3.81 mm.

**WARNING!** The occupancy sensor connector and the GPIO port are not compatible with each other due to the voltage level difference, please do not connect them directly.

3.2.7. GPIO - General Purpose Input/Output Ports

The switcher is supplied with an 8-pole Phoenix connector with six GPIO pins, which operates at TTL digital signal levels, and can be set to high or low level (Push-Pull). The direction of the pins can be input or output (adjustable). Voltage ranges for GPIO inputs are the following:

<table>
<thead>
<tr>
<th>Input voltage [V]</th>
<th>Output voltage [V]</th>
<th>Max. output current [mA]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Logical low level</td>
<td>0 - 0.8</td>
<td>0 - 0.5V</td>
</tr>
<tr>
<td>Logical high level</td>
<td>2 - 5</td>
<td>4.5 - 5V</td>
</tr>
</tbody>
</table>

The maximum total current for the six GPIO pins is 180 mA.

<table>
<thead>
<tr>
<th>Pin nr.</th>
<th>Level and direction</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Configurable</td>
</tr>
<tr>
<td>2</td>
<td>5V</td>
</tr>
<tr>
<td>3</td>
<td>Ground</td>
</tr>
<tr>
<td>4</td>
<td>5V</td>
</tr>
<tr>
<td>5</td>
<td>Ground</td>
</tr>
<tr>
<td>6</td>
<td>Ground</td>
</tr>
</tbody>
</table>

**INFO:** The recommended cable for the connectors is the AWG24 (0.2 mm² diameter) or the generally used ‘alarm cable’ with 4x0.22 mm² wires.

**Compatible plug type**

Phoenix® Combinic series (3.5mm pitch 8-pole), type: MC 1.5/8-ST-3.5.

**WARNING!** The occupancy sensor connector and the GPIO port are not compatible with each other due to the voltage level difference, please do not connect them directly.

3.2.8. DC Input Connector

The switcher is built with 2-pole Phoenix connector for 5V DC 3A power connection.
3.3. Connecting Steps

- **HDMI**: Connect an HDMI source (e.g. BYOD laptop or room PC) to the HDMI input port.
- **CATx**: Connect the Ethernet port to a Local Network Switch to provide Ethernet connection for device configuration and/or for a source device (only on MMX2-4x3-H20).
- **CATx**: CATx Connect the switcher to an Ethernet Ethernet port to access the local network.
- **HDMI**: Connect an HDMI sink (e.g. projector) to the HDMI output port.
- **RS-232**: Optionally for RS-232 extension: connect a controller/controlled device (e.g. projector to the RS-232 port.
- **Audio**: Optionally connect an audio device (e.g. active speakers) to the analog audio output port by an audio cable.
- **GPIO**: Optionally connect a device (e.g. a relay box) to the GPIO port.
- **OCS**: Optionally connect an occupancy sensor to the OCS port.
- **Power**: Connect the external power supply to the AC power socket and the switcher unit. Powering the device is recommended as the final step.
4. Device Concept

The following chapter describes the features of the device with a few real-life examples.

- Universal Switcher Concept
- Video Interface
- The Autoselect Feature
- Audio Interface
- Ethernet Interface
- Basic Network Security
- WebSocket Service (WS, WSS)
- Serial Interface
- GPIO Interface
- OCS Interface
- Further Built-in Features
4.1. Universal Switcher Concept

MMX2 series device is a multi-functional audio/video HDMI 2.0 matrix switcher with four inputs and one or three outputs designed into a compact size frame. The device is built with various interfaces, e.g. Ethernet, RS-232, GPIO, OCS and with audio de-embedder function.

4.2. Video Interface

Summary of Video Ports

| MMX2-4x1-H20 | 4x 1x |
| MMX2-4x3-H20 | 4x 3x |

4.2.1. MMX2-4x1-H20 and MMX2-4x3-H20

DIFERRENCE: MMX2-4x1-H20 model contains only one HDMI output port.

4.3. The Autoselect Feature

Aside from manually selecting crosspoints, you can choose the Autoselect option both in case of audio and video ports. Three types of Autoselect is available:

- **First detect mode**: selected input port is kept connected to the output while it has an active signal.
- **Priority detect mode**: it is always the highest priority active input is selected to transmit.
- **Last detect mode**: it is always the last attached input is selected to transmit.

Flowchart of Autoselection modes
4. Device Concept

Automatic Input Selection - Example

![Diagram showing automatic input selection example]

The Concept
If there is no other source connecting to the switcher, only Laptop 2 (HDMI input 4) it will be automatically switched to the HDMI output. If the Laptop 2 and the PC are also connected to the switcher, the PC (HDMI input 3) will be switched to the HDMI output. If the Media player is connected to HDMI input 2, the Media player will be switched to the HDMI output. Finally, if the Laptop 1 is connected (HDMI input 1), it will be switched to HDMI output as it has the highest priority – independently of the presence of the other video signals.

Settings
- **HDMI output**: Set the Autoselect to Enabled. The Autoselect mode is Priority detect. The priorities are the following (the lowest number means the highest priority):

<table>
<thead>
<tr>
<th>Source device</th>
<th>Input port</th>
<th>Priority</th>
</tr>
</thead>
<tbody>
<tr>
<td>Laptop 1</td>
<td>I1 (HDMI IN 1)</td>
<td>0</td>
</tr>
<tr>
<td>Media player</td>
<td>I2 (HDMI IN 2)</td>
<td>1</td>
</tr>
<tr>
<td>PC</td>
<td>I3 (HDMI IN 3)</td>
<td>2</td>
</tr>
<tr>
<td>Laptop 2</td>
<td>I4 (HDMI IN 4)</td>
<td>3</td>
</tr>
</tbody>
</table>

Priorities can be set in Lightware Device Controller software, see the related settings in the Autoselect section.

4.4. Audio Interface

The device can receive embedded audio signal on the HDMI inputs. The switcher has a built-in audio de-embedder which means the device is able to de-embed audio from its video ports to its analog audio output port.

4.5. Ethernet Interface

Summary of Ethernet ports

<table>
<thead>
<tr>
<th>Secure Control Ethernet</th>
<th>Utility Ethernet</th>
<th>Configurable Ethernet</th>
</tr>
</thead>
<tbody>
<tr>
<td>MMX2-4x1-H20</td>
<td>-</td>
<td>-</td>
</tr>
<tr>
<td>MMX2-4x3-H20</td>
<td>✓</td>
<td>✓</td>
</tr>
</tbody>
</table>

The device can be controlled via Ethernet (standard RJ45 connector). This interface supports:
- Configuration of the device with Lightware Device Controller. For more information about the LCD, see the Software Control - Lightware Device Controller section.
- Control of the Lightware devices with LW3 command protocols. See more details about the Lightware protocol in the LW3 Programmers ' Reference section.
- Establishing the connection to Lightware Device Updater v2 software and performing Firmware Update.
- Creation of a local network, passthrough the Ethernet traffic.
- The switcher provides WS/WSS services on its 80 (for WS) and 443 (for WSS) ports to control the device with LW3 protocol commands. For more details, see the WebSocket Service (WS, WSS) section.
- REST API interface is also designed for controlling the switcher. See more details in the Lightware REST API Reference section.
4.6. Basic Network Security

These basic network security improvements help to prevent unauthorized access to the MMX2 series switchers:

- Disable Ethernet Ports
- Disable Network Services
- Basic Authentication
- Encryption (HTTPS, WSS)

The following table summarizes the ports, protocols, features and the security options.

<table>
<thead>
<tr>
<th>Purpose/function</th>
<th>Affected software</th>
<th>Protocol</th>
<th>Port number</th>
<th>Port disable option</th>
<th>Encryption</th>
<th>Authentication</th>
<th>Other features</th>

<td>UDP</td>
<td>230.76.87.82:37421</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td></td>
</tr>
</tbody>
</table>

INFO: The ports are necessary to be passed via a network switch/firewall for proper operation between the device and the softwares.

ATTENTION! Be careful when combining the security functions; improper settings may cause malfunction.

4.6.2. HTTP/HTTPS

MMX2 series switcher provides HTTP/HTTPS server services on its 80 (for HTTP) and 443 (for HTTPS) ports. The following services can be used via HTTP/HTTPS:

- LW3 over WebSocket (WS, WSS) for LW3 protocol or using LDC for device control
- REST API for device control
- Serial message sending with REST API
- Firmware update
- WelcomeScreen image upload
- UserScripts upload
- Logfiles download from the device

Basic Authentication

To limit user access for HTTP/HTTPS server services, basic authentication can be turned on for 80 and 443 ports separately.

ATTENTION! Authentication feature in MMX2 series is not equal to the Cleartext login feature in the Advanced Control Pack v3 of the TPS family extenders.

The picture below illustrates the successful authentication process:

4.6.1. Disable Ethernet Ports

Internal Ethernet connections can be limited by enabling/disabling the Ethernet ports depending on the actual system configuration.
User

- The switcher can manage one user (with fixed username: admin) with full access.

Password

- No password is set by default, the authentication can be enabled after setting a password. The old password is not necessary for modifying.
- The following characters are allowed: Letters (A-Z) and (a-z) and numbers (0-9). Max length: 100 characters.
- The device does not store the password string, so it cannot be queried.
- The password can be reset by calling factory defaults (Reset to Factory Default Settings).

Follow the instructions to set the authentication:

Step 1. Set the password with Lightware Device Controller software (Network) or LW3 protocol command (Setting a Password for Authentication).

Step 2. Enable the authentication on the chosen port (HTTP: 80 or HTTPS: 443) with Lightware Device Controller software (Network) or LW3 protocol command (Enabling Authentication).

Step 3. Restart network services.

ATTENTION! The password will not be encrypted by this authentication mode, it remains accessible when the communication happens on HTTP.

4.6.3. Encryption (HTTPS, WSS)

HTTP protocol uses clear text format for data transport. This method allows a third-party to listen in and eavesdrop on the transferred information.

HTTPS request-response

The same services are available on HTTPS as HTTP (for the detailed service list, see the HTTP/HTTPS section).

- The MMX2 switcher generates a self-signed certificate, so the user does not have to deal with the configuration.
- New certificate is generated after hostname changing or restoring the factory default settings.
- Please ensure proper time and date setting in MMX2, because it affects the self-signed certificate (SSL) generation when using WSS or HTTPS. Improper time and date setting may lead to certificate rejection.

ATTENTION! HTTPS does not guarantee that the communication is secure. Make sure that the client communicates with the server directly, without any third-party element in the communication route (Man-in-the-middle attack).

Basic Security System Example

To keep the system protected, the unsecured ports should be disabled and data traffic should be managed by secured channels.
Step 1. Disable the HTTP port (80) and use HTTPS (443) instead.
The setting is available in the following ways:
- Lightware REST API HTTP posts (see the details in the Enabling/Disabling Network Service Port section).
- LW3 protocol commands (see the details in the Enabling/Disabling Service Port section).

Step 2. Set the password and enable the authentication.
The username is always fixed (admin) and the password has to be set before the authentication is enabled.
The setting is available in the following ways:
- Lightware Device Controller software (see the details in the Network section)
- Lightware REST API HTTP posts (see the details in the Setting Password for Authentication and the Enabling Authentication sections).
- LW3 protocol commands (see the details in the Setting a Password for Authentication and the Enabling Authentication sections).

Step 3. Disable 6107 port, use Lightware REST API HTTPS (443 port) or WSS for LW3 protocol to control the device.
ATTENTION! Lightware Device Controller software operates on 6107 port. In this case, the switcher can be controlled only with protocol commands.
The setting is available in the following ways:
- Lightware REST API HTTP posts (see the details in the Enabling/Disabling Network Service Port section).
- LW3 protocol commands (see the details in the Enabling/Disabling Service Port section).

Step 4. Disable the remaining unsecured Serial over IP ports (8001 and 8002).
The setting is available in the following ways:
- Lightware REST API HTTP posts (see the details in the Enabling/Disabling Network Service Port section).
- LW3 protocol commands (see the details in the Enabling/Disabling Service Port section).

4.7. WebSocket Service (WS, WSS)
The switcher provides WS/WSS services on its 80 (for WS) and 443 (for WSS) ports to control the device with LW3 protocol commands.
The switcher can manage 18 connected clients in total simultaneously for WS (80), WSS (443), and LW3 (6107) ports.
The WebSocket connection is built up by HTTP handshake. After the connection is established, communication switches to a bi-directional WebSocket protocol for LW3 communication.

**WS/WSS**

The main difference between HTTP and WS communication process is that HTTP closes the connection between the client and the server after one request-response pair, while WebSocket keeps the connection open. This feature allows real-time communication such as controlling the device with LW3 protocol commands. The WS functions are also available via WebSocket Secure (WSS).
4. Device Concept

4.8. Serial Interface

Serial data communication can be established via the local RS-232 port (Phoenix connector).

4.8.1. Serial Port Diagram

The MMX2 switcher works as an RS-232 bi-directional converter. The TCP signal is converted to RS-232 data and vice versa. TCP/IP port numbers are defined for serial ports (8001, 8002) for this purpose. If a command is coming from the Ethernet interface that is addressed to the port no. 8001, it will be transmitted to the Tx pin of the local RS-232 port (P1). That works in the opposite direction too, and the method is the same on the serial interface of the Ethernet port as well, but the serial message will be transmitted to all opened TCP sockets (if the TCP connection closed meanwhile, the message will not be transmitted). It can handle a maximum of 20 connections at the same time.

Disabling Serial over IP function disconnects the Serial/TCP converter from the Ethernet layer and the serial data won't be transmitted to the Ethernet network. This setting is available in the Lightware Device Controller software (in the Setting menu, Network tab) or with LW3 protocol command (Enabling/Disabling Network Service Port).

The switcher can manage a maximum of 20 connected clients at the same time for each serial port.

Message Sending Function

Message sending function allows RS-232 command sending to a third-party (or a Lightware) device from the switcher. Any format is acceptable (text, binary, hexadecimal, etc.), maximum message size is 100Kb. Escaping is unnecessary.

Serial message sending is possible by using HTTP Post with Lightware REST API:

- header: POST:http://<ip>/api/V1/MEDIA/SERIAL/<serial_port>/send HTTP/1.1
- body: <message>

<serial_port> is P1 or P2.

The MP1 (CPU) is available over REST API interface. The MP1 (CPU) sends the message via the serial port to a third-party (or a Lightware) device. This is a one-way communication, the response will not be interpreted by the CPU. Consider using Serial over IP function instead if listening to a serial device is important.

For more details about the Lightware REST API, see the Lightware REST API Reference chapter.

INFO: The switcher can receive a serial message in a special way. When a message is sent from the switcher, the response from the connected device is accepted within 100 ms. The communication is closed after that time interval.

Serial Options - Example

External Controller Concept

The projector is turned on and off by the external System Controller. The System controller has an internal REST API client, which is connected to the MMX2 switcher. It sends a HTTP POST to the MMX2-4x3-H20. The Switcher sends a serial message over the P1 port to the Projector.

Security: When interpreting of the response from the projector is necessary, serial over IP port (8001 or 8002) can be enabled, in this case, the 8001 or 8002 ports are available from other devices too, and it makes the system unsecured.
4. Device Concept

4.9. GPIO Interface

The General Purpose Input/Output (GPIO) port is a multifunctional input/output interface to control the switcher or third-party devices and peripherals. You can establish the connection between the controller/controllable device and the switcher by the 8-pole Phoenix connector. The direction of the six pins is configurable independently from each other.

**GPIO Options - Example**

The ceiling lamp is turned off by Relay 1 and the projection screen is rolled down by Relay 2. Both relays are controlled by the GPIO port.

When the PC starts to play the video presentation, the signal is received over the HDMI input, so the GPIO pins send a signal to Relay 1 to open, which results in the lights being turned off. Furthermore, the GPIO pins also send a signal to Relay 2 to close and the projection screen is rolled down. When the presentation ends, signal ceases on the HDMI input, so the GPIO pins send a signal to Relay 1 to close, which results in the lights being turned on and send a signal to Relay 2 to open, so the projection screen returns to its enclosure.

**Security:** Userscript does not need to use the unsecured ports for GPIO management.

**ATTENTION!** Please always check the electrical parameters of the devices that you want to control. The maximum current of one GPIO pin is 30 mA, the maximum total current for the six pins is 180 mA.

4.10. OCS Interface

**OCS Application Example**

When the occupancy sensor detects people in the meeting room, the switcher turns on the ceiling lamp.

Userscript feature supports the automatism in MMX2 devices. The Userscript can be uploaded and run in the Settings Menu, System tab in the Lightware Device Controller Software. The script packages are created by Lightware, please contact your sales representative for help.

**Security:** Userscript does not need to use the unsecured ports for OCS management.

In case of applying Leviton OCS (https://www.leviton.com/en/products/osc10-m0w), inserting a 1 kOhm external resistor between the 1st and the 3rd pins is necessary; for more information see the OCS Sensor section.

4.11. Further Built-in Features

4.11.1. Device Cloning – Configuration Backup and Restore

The device (configuration) cloning of MMX2 series switcher is a simple method that eliminates the need to repeatedly configure certain devices to have identical (non-factory) settings. If the devices are installed in the same type of system multiple times, then it is enough to set up only one device to fit the user’s needs and then copy those settings to the others, thus saving time and resources.

Cloning is possible between devices using the same firmware version. All LW3 settings, WelcomeScreen Image and UserScript will be saved.

Please note that the clone file can be downloaded and uploaded via HTTP or HTTPS, so 80 or 433 port has to be enabled.

See more information about the settings in the Clone configuration section.
Software Control - Lightware Device Controller

Taurus device allows setting all the parameters via a user-friendly interface. Open a web browser (Google Chrome or Mozilla Firefox is highly recommended) and connect to the device to access the parameters and settings. The other option is to use the Lightware Device Controller (LDC) software and connect to the device without a web browser. The features are described in the coming sections.

- Software Control Modes
- Install and Update
- Running the LDC
- Establishing the Connection
- Crosspoints
- Port Properties Window
- CEC Tool
- EDID Management
- Control Menu
- Settings Menu
- Advanced View Window
5.1. Software Control Modes

The device can be controlled in the following ways:

- Using the built-in web page,
- Using the Lightware Device Controller (LDC) software,
- Sending REST API commands (see the Lightware REST API Reference chapter), or
- Sending LW3 commands (see the LW3 Programmers’ Reference chapter).

**DIFFERENCE:** The built-in webpage is available from firmware package v1.4.0b4.

**Built-in web page vs. LDC**

The LDC and the built-in web page shows the same content, but there are some minor differences:

<table>
<thead>
<tr>
<th>Function</th>
<th>Built-in Web</th>
<th>LDC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Platform</td>
<td>A Web browser running under Windows, macOS, or Android</td>
<td>Windows, macOS</td>
</tr>
<tr>
<td>Installation</td>
<td>Web browser needed only</td>
<td>Required</td>
</tr>
<tr>
<td>Device discovery</td>
<td>-</td>
<td>✓</td>
</tr>
</tbody>
</table>

The Main window – displayed in LDC
5. Software Control - Lightware Device Controller

5.2. Install and Update

INFO: After the installation, the Windows and the Mac application has the same look and functionality. This type of the installer is equal to the Normal install in case of Windows and results in an updatable version with the same attributes.

### Installation for Windows OS

Run the installer. If the User Account Control drops a pop-up message, click Yes.

During the installation you will be prompted to select the type of the installation: normal and the snapshot install:

<table>
<thead>
<tr>
<th>Normal install</th>
<th>Snapshot install</th>
</tr>
</thead>
<tbody>
<tr>
<td>Available for Windows and macOS</td>
<td>Available for Windows</td>
</tr>
<tr>
<td>The installer can update only this instance</td>
<td>Cannot be updated</td>
</tr>
<tr>
<td>Only one updatable instance can exist for all users</td>
<td>More than one different version can be installed for all users</td>
</tr>
</tbody>
</table>

#### Comparison of installation types

**ATTENTION!** Using the Normal install as the default choice is highly recommended.

### Installation for macOS

Mount the DMG file by double clicking on it, and drag the LDC icon over the Applications icon to copy the program into the Applications folder. If you want to copy the LDC into another location, just drag the icon over the desired folder.

### Upgrading of LDC

**Step 1.** Run the application.

The **Device Discovery** window appears automatically, and the program checks the available updates on Lightware's website and opens the update window if LDC updates are found. The current and the update version numbers can be seen at the top of the window and they are shown in this window even with the snapshot install.

The **Update** window can also be opened by clicking the About icon and the Update button.

**Step 2.** Set the desired update setting in the Options section.

- If you do not want to check for the updates automatically, uncheck the circle which contains the green tick.
- If you want to postpone the update, a reminder can be set with different delays from the drop down list.
- If the proxy settings traverse the update process, set the proper values, then click the OK button.

**Step 3.** Click the Download update button to start the updating.

The updates can be checked manually by clicking on the Check now button.

5.3. Running the LDC

The common way to start the software is to double-click on the LDC icon. But the LDC can be run by command line parameters as follows:

#### Connecting to a Device with Static IP Address

The LDC is connected to a device with the indicated static IP address directly; the Device Discovery window is not displayed. When the port number is not set, the default port is used: 6107 (LW3 protocol). The LDC is connected to a device with the indicated static IP address directly; the Device Discovery window is not displayed. When the port number is not set, the default port is used: 6107 (LW3 protocol).

**Format:** `LightwareDeviceController -i <IP_address>:<port>`

**Example:** `LightwareDeviceController -i 192.168.0.20:6107`

#### Adjusting the Zoom

The window can be zoomed to a specific value to fit to the resolution of the desktop (higher/lower). ‘1’ is the default value (100%).

**Format:** `LightwareDeviceController -z <magnifying_value>`

**Example:** `LightwareDeviceController -z 1.2`

**ATTENTION!** The last set value is stored and applied when LDC is started without a parameter.
5.4. Establishing the Connection

Step 1. Connect the device to a computer via Ethernet.

Step 2. Run the controller software; device discovery window appears automatically.

The Ethernet tab consists of two lists. All devices list contains all Lightware devices that are available in the connected network (in the 255.255.0.0 subnet). However, there is no need to browse all the available devices as you can expand the list of Favorite devices with any Lightware device that is connected via Ethernet by any of the following ways:

- Mark the desired device with the ✅ symbol in the All Devices list,
- Press the Add button and add the device in the appearing window, or
- Import the list of favorite devices that was exported previously.

When both the 6107 and 80 ports are disabled, only the secure 443 port remains open, the MMX2 switcher appears in the all devices list with 443 port.

Double click on the device offers an option to open the other ports (80 and 6107) and use e.g. Lightware Device Controller software.

Add New Favorite Device

DIFFERENCE: This feature is available in LDC since v2.5.5.

Press the Add button; in the appearing window you can enter the IP address. The hostname of the desired device can be used instead, if it is supported. That allows setting a unique name to identify the device in a network. If the host name is saved in this window and the IP address is changing, the device will still be available and connectible.

ATTENTION! The host name connection-feature does not work when the target device is accessed over VPN.

See more information about the host name property in the Setting the Hostname section.

Import/Export the List of Favorite Devices

DIFFERENCE: This feature is available in LDC since v2.5.5.

The list of favorite devices can be exported/imported by the dedicated buttons (saved as *.JSON file). The list can be imported later (in another computer, too), but please note that the current list will be overwritten by the imported list.

Changing the IP Address

To modify the IP address settings quickly, it is not necessary to enter the device's settings/network menu, you can set them by clicking the pencil icon beside the IP address.

You can see the new settings only in this window. The device needs a few seconds to apply the new settings.

Identifying the Device

DIFFERENCE: This feature is available only from 1.2.0 firmware version.

Clicking on the icon results in the blinking of the status LEDs for 10 seconds. The feature helps to find the device itself physically.
5.5. Crosspoints

Main menu: 
The available menu items are displayed. The active one is highlighted.

Information ribbon: 
The label shows the device label, which can be edited in the Settings menu - Status tab.

Submenu: 
The Video & Audio crosspoint menu is displayed.

Video input ports: 
Each tile represents a video input port. The tiles below the port show the current crosspoint setting; if the port is switched to an output, the color of the tile is green, otherwise white. Clicking on the port tile opens the input properties window.

Audio input ports: 
Each tile represents an audio input port. All of them are logical audio ports, they mean the de-embedded audio channel of the selected HDMI inputs. For more details, see the Embedded Audio Input.

Audio output port: 
Analog audio output port; clicking on the output tile opens the Analog Audio Output window.

Video output ports: 
HDMI video output ports; clicking on the tile opens the HDMI Video Output port properties window.

Advanced view: 
Displaying the Advanced View Window, showing the Terminal window and the LW3 protocol tree.

Properties window: 
Settings and status information of the selected panel are displayed in this section. Clicking on the icon, the properties section opens in new window.

Navigation button: 
Device discovery window can be displayed by clicking on this button.
5.5.1. Port Tiles

The colors of the port tiles and the displayed icons represent different states and information:

![Port Tiles Diagram]

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
<th>Icon is highlighted</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![ Mellotron icon]</td>
<td>Port name</td>
<td></td>
<td></td>
</tr>
<tr>
<td>![ icon]</td>
<td>Port icon</td>
<td></td>
<td></td>
</tr>
<tr>
<td>![ icon]</td>
<td>Port number</td>
<td></td>
<td></td>
</tr>
<tr>
<td>![ icon]</td>
<td>Signal present indicator</td>
<td>green: present  grey: not present</td>
<td></td>
</tr>
<tr>
<td>![ icon]</td>
<td>State indicators</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**State Indicators**

- #lock
- #unlock
- #mute
- # unmute

Following icons display different states of the port/signal:

<table>
<thead>
<tr>
<th>Icon is grey</th>
<th>Description</th>
<th>Icon is highlighted</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![ icon]</td>
<td>Port is unmuted</td>
<td></td>
<td>Port is muted</td>
</tr>
<tr>
<td>![ icon]</td>
<td>Port is unlocked</td>
<td></td>
<td>Port is locked</td>
</tr>
<tr>
<td>![ icon]</td>
<td>Signal is not encrypted with HDCP</td>
<td>2.2</td>
<td>Signal is encrypted with HDCP (the HDCP version is displayed)</td>
</tr>
<tr>
<td>![ icon]</td>
<td>Embedded audio is not present</td>
<td></td>
<td>Embedded audio is present</td>
</tr>
<tr>
<td>![ icon]</td>
<td>There is no connected device</td>

<td>The device is connected</td>
</tr>
<tr>
<td>![ icon]</td>
<td>Autoselect is disabled</td>
<td></td>
<td>Autoselect is enabled</td>
</tr>
<tr>
<td>![ icon]</td>
<td>Audio is unmuted</td>
<td></td>
<td>Audio is muted</td>
</tr>
</tbody>
</table>
5. Software Control - Lightware Device Controller

5.6. Port Properties Window
Clicking on the port tile opens the Port properties window. This section shows the available settings and status information by port types.

5.6.1. HDMI Video Input
Clicking on the HDMI video input port icon results in opening the Port properties window. The most important information and settings are available from the panel.

![Port properties window of the HDMI video input](image)

- **Port name**
  The name of a port can be changed by typing the new name and clicking on the **Set** button. The following characters are allowed when naming: Letters (A-Z) and (a-z), hyphen (-), underscore (_), numbers (0-9), and dot (.). Max length: 63 characters.

- **Lock**
  The port can be locked to the currently connected output ports by adding a tick. If the port is locked, the crosspoint state of this port cannot be changed.

  **INFO:** When the locked input is switched to the output, the crosspoint state cannot be changed and all inputs are locked in that line.

- **Mute**
  The incoming signal can be muted/unmuted by adding/removing a tick. If the port is muted, no signal is transmitted from the input port.

- **Allow HDCP Version**
  ATTENTION! HDCP 2.2 signal handling is limited up to two input ports at the same time.
  - **Off:** The connected source will detect that the switcher is not HDCP-compliant and turn off authentication if the content allows it.
  - **HDCP 1.4:** The connected source will detect that the switcher is compliant with HDCP 1.4, but not compliant with HDCP 2.2.
  - **HDCP 2.2:** The connected source will detect that the switcher is compliant with HDCP 2.2.

- **Frame detector**
  For more details, see the Frame Detector section.
5.6.2. HDMI Video Output

Port properties window of the HDMI video output

### Available settings and tools

#### General

**Port name**

The name of a port can be changed by typing the new name and clicking on the **Set** button. The following characters are allowed when naming: Letters (A-Z) and (a-z), hyphen (-), underscore (_), numbers (0-9), and dot (.). Max length: 63 characters.

**Lock** #lock #unlock

The port can be locked to the currently connected output ports by adding a tick. If the port is locked, the crosspoint state of this port cannot be changed.

**Mute** #mute #unmute

The incoming signal can be muted/unmuted by adding/removing a tick. If the port is muted, no signal is transmitted from the input port.

**HDCP Mode** #hdcp

- HDCP mode: Auto / Always - The transmitter forces the source to send the signal without encryption if the content allows when Auto mode is selected; #signaltype #hdcp

#### Output Options

**Output 5V Enable**

- Auto / On / Off - The setting lets the source and the sink devices be connected – independently of the transmitted signal.

**Output Signal Type**

- Auto / DVI - The outgoing signal format can be selected from a drop-down menu.

**Embedded Audio Mute**

Add a tick to turn off the embedded audio.

#### Frame detector

For more details, see the Frame Detector section.
5. Software Control - Lightware Device Controller

5.6.3. Embedded Audio Input

Audio port properties window of HDMI input

Applied firmware package: v1.4.0b4  |  LDC software: v2.5.17b2

Autoselect

Autoselect feature makes the switching of an input to an output without human intervention possible. The crosspoint state changes based on the active input signals.

The following operation policies can be set:

- **Disable autoselect**: crosspoint state change happens manually.
- **First detect**: selected input port is kept connected to the output as long as it has an active signal.
- **Last detect mode**: it is always the last attached input that is selected to be transmitted.
- **Individual input settings**: it is always the highest priority active input that is selected to be transmitted (1- highest priority, 100- lowest priority).

Pay attention to the following settings for the proper operation of the Autoselect function:

- Be sure that all priority values are filled in;
- Be sure that all inputs are enabled with the green tick on the right side;
- Always click on the Apply autoselect settings button after the changes to launch the new settings.

See more details about the feature in the The Autoselect Feature section.

Available settings

- **Port name**: The name of a port can be changed by typing the new name and clicking on the Set button. The following characters are allowed when naming: Letters (A-Z) and (a-z), hyphen (-), underscore (_), numbers (0-9), and dot (.). Max length: 63 characters.
- **Lock**: The port can be locked to the currently connected output ports by adding a tick. If the port is locked, the crosspoint state of this port cannot be changed.
- **Mute**: The incoming signal can be muted/unmuted by adding/removing a tick. If the port is muted, no audio signal is transmitted from the input port.
5.6.4. Analog Audio Output

Port properties window of the analog audio output

Available settings:

- Port name
- Mute/unmute the port
- Lock/unlock the port
- Autoselect settings: off / follow video (O1 or O2). Follow video option means that the audio of the selected video input will be switched to the analog audio output. When the video crosspoint changes, audio crosspoint follows it.
- Volume: from 100 to 0%, in step 1% (0 dB to -95.625 dB, in step 0.375 dB (default is 0 dB));
- Balance: from -100 to +100, in step 1 (default is 0 = center).

5.6.5. Frame Detector

The ports can show detailed information about the signal like full size and active video resolution. This feature is a good troubleshooter if compatibility problems occur during system installation. To access this function, open the port properties window and click on Frame detector button.

Frame Detector Window

Lightware’s Frame Detector function works like a signal analyzer and makes it possible to determine the exact video format that is present on the port, thus helps to identify many problems. E.g. actual timing parameters may differ from the expected and this may cause some displays to drop the picture.

Frame Detector measures detailed timings on the video signals just like a built-in oscilloscope, but it is much more easy to use. Actual display area shows the active video size (light grey). Dark grey area of the full frame is the blanking interval, which can contain the info frames and embedded audio data for HDMI signals. Shown values are measured actually on the signal and not retrieved only from the HDMI info frames.
5.7. CEC Tool

The device is able to send Consumer Electronics Control (CEC) commands via the HDMI outputs. This feature is to remote control the sink device. CEC is a bi-directional communication via the HDMI cable.

ATTENTION! Make sure that the controlled unit is CEC-capable and this function is enabled.

- Drop-down command list: Containing the basic CEC commands, most of them are displayed on the graphical interface too (on the left side). Click on the Send button to send the command.
- Custom command textbox: The text field is for sending hexadecimal commands in the indicated format to the source. Click on the Send button to send the command.
- Received Command box: Displays all the sent CEC commands (in red) and the received answers (in blue) with a timestamp.
- Clear button: Click on the Clear button to erase the content of the terminal window.
- CEC command button panel: This panel provides the quick and easy management of CEC commands. These buttons are pre-programmed with basic functions and send commands towards the sink. The communication is displayed in the Received Command box. For the list of the commands, see the CEC Command Sending section. Both the layout and the functionality are similar to the design of a remote control.

It can occur that the third-party device can receive, but not execute the command, because it is not supported by the product. Check the accepted commands in the documentation of the device.
5.8. EDID Management

Advanced EDID Management can be accessed by selecting the EDID menu. There are two panels: left one contains Source EDIDs, right one contains Destination places where the EDIDs can be emulated or copied.

5.8.1. EDID Operations

Changing Emulated EDID

Step 1. Choose the desired EDID list on the source panel and select an EDID.

Step 2. Press the Emulated button on the top of the Destination panel.

Step 3. Select the desired port on the right panel (one or more ports can be selected); the EDID(s) will be highlighted with a yellow cursor.

Step 4. Press the Transfer button to change the emulated EDID.

Learning an EDID

The process is the same as changing the emulated EDID; the only difference is the Destination panel: press the User button. Thus, one or more EDIDs can be copied into the user memory either from the factory memory or from a connected sink (Dynamic).

Exporting an EDID

Source EDID can be downloaded as a file (*.bin, *.dat or *.edid) to the computer.

Step 1. Select the desired EDID from the Source panel (line will be highlighted with yellow).

Step 2. Press the Export button to open the dialog box and save the file to the computer.

Importing an EDID

Previously saved EDID (*.bin, *.dat or *.edid file) can be uploaded to the user memory:

Step 1. Press the User button on the top of the Source panel and select a memory slot.

Step 2. Press the Import button below the Source panel.

Step 3. Browse the file in the opening window then press the Open button. Browsed EDID is imported into the selected User memory.

ATTENTION! The imported EDID overwrites the selected memory place even if it is not empty.

Deleting EDID(s)

The EDID(s) from User memory can be deleted as follows:

Step 1. Press User button on the top of the Destination panel.

Step 2. Select the desired memory slot(s); one or more can be selected ("Select All" and "Select None" buttons can be used). The EDID(s) will be highlighted in yellow.

Step 3. Press the Delete selected button to delete the EDID(s).
5.8.2. EDID Summary Window

Select an EDID from Source panel and press the Info button to display EDID summary.

5.8.3. Editing an EDID

Select an EDID from the Source panel and press the Edit button to display Advanced EDID Editor window. The editor can read and write all descriptors, which are defined in the standards, including the additional CEA extensions. Any EDID from the device’s memory or a saved EDID file can be loaded into the editor. The software resolves the raw EDID and displays it as readable information to the user. All descriptors can be edited, and saved in an EDID file, or uploaded to the User memory. For more details about EDID Editor please visit our website (www.lightware.com) and download the EDID Editor Application note.
5.8.4. Creating an EDID - Easy EDID Creator

Since the Advanced EDID Editor mentioned above needs more complex knowledge about EDID, Lightware introduced a wizard-like interface for fast and easy EDID creation. With Easy EDID Creator, it is possible to create custom EDIDs in four simple steps. By clicking on the Create button below the Source panel, Easy EDID Creator is opened in a new window. For more details about EDID Editor please visit our website (www.lightware.com) and download the EDID Editor Application note.

5.9. Control Menu

5.9.1. Ethernet

Ethernet tab in Control menu

Five ports are displayed in the Ethernet settings: Three of them belong to the RJ-45 Ethernet connectors. You can check the status of the Ethernet line by each ports: the speed and the duplexity of the connection. The remaining two are for configuring the Ethernet layer in the USB-C ports.

The following settings are available for each ports:

- Rename the port
- Enable / disable the port;
5.9.2. GPIO

The GPIO port has 6 pins, which operate at TTL digital signal levels and can be controlled by LDC or protocol commands. Select a GPIO pin under the Port settings section; the settings (pin direction and input level) are displayed on the port tiles as well.

INFO: Output level can be set only if the pin direction is set to Output. In case of input direction, the output level setting and the Toggle button is not available.

Interval (only for Output direction)

Interval section is designed for setting the chosen GPIO pin to the specified level for a specified time. Configure the Duration time and the Logic level of the desired value. Confirm by clicking the Set interval button.

5.9.3. OCS - Occupancy Sensor

The OCS sensor has 3 pins, where the first pin is a 24V logic input. The default state is high. Different type of sensors exist: some send high level, some send low level to this input when the room is occupied. Active-high or active-low logic might be configured for this port in LDC to support them.

INFO: Input level refers to the current input signal level of the first pin.

State value can be free or occupied, depending on the Sensor type setting and the Input level (e.g. when the sensor type is Active high and the input value is high, the state reports 'Occupied').

Sensor type can be active high/active low, and this defines whether the low or high input level means the occupancy.
5.9.4. RS-232

**DIFFERENCE:** MMX2-4x1-H20 model is assembled with one local RS-232 port.

**RS-232 tab in Control menu**

The following settings and functions are available: #rs-232

- **Baud rate:** 9600, 14400, 19200, 38400, 57600, 115200;
- **Data bits:** 8;
- **Parity:** None, Odd, or Even;

**Send Message Section**

The serial message sending is achieved by Lightware REST API, and it can be in text or hexadecimal format. The CR/LF (Carriage Return/Line Feed) can be enabled optionally.

5.10. Settings Menu

5.10.1. Status

The most important hardware and software related information can be found on this tab: hardware and firmware version, serial numbers, MAC addresses, temperatures, and voltage information. Device label can be changed to a unique description by the Set button.

**Status tab in Settings menu**

You can disable the functionality of the front panel buttons by marking the Lock front panel option. This is same method of the control lock enabled by the front panel buttons. See the details in the Control Lock section. Clicking on the Identify me button results in the blinking of the status and crosspoint LEDs in green for 10 seconds. The feature helps to identify the device itself in the rack shelf.

**Dark mode enable:** When Dark mode is enabled, all LEDs on the unit are switched off (after 60 seconds by default) if no buttons are pressed. Pressing any button brings back the status info on the LEDs without performing the function of the button itself.
5.10.2. Network

Network tab in Settings menu

Network Settings

IP address and DHCP settings can be set on this tab. Always press the Apply settings button to save changes. When the host name is modified, clicking on the Restart http(s) services button is also needed.

INFO: New certificate is generated after the hostname changing.

Network Services

HTTP/HTTPS

MMX2 series switcher provides HTTP/HTTPS server services on its 80 and 443 port to make it accessible over WebSocket (WS), LW3 protocol, using Lightware Device Controller and REST API for device control (see the detailed list about the additional available features in the summary table of the Basic Network Security section).

HTTPS protocol encrypts the transferred data to keep it protected. For more details about the HTTPS, see the Encryption (HTTPS, WSS) section.

- Enable/Disable HTTP/HTTPS port: To ensure the secure data traffic, the HTTP port (80) can be disabled, and the all the information can be transferred via HTTPS (443 port).
- 80 or 443 port is necessary to upload/download UserScripts, log and clone files so one of them should be opened to reach these functions.

ATTENTION! Please ensure proper time and date setting in the device because it affects the self-signed certificate (SSL) generation when using WSS or HTTPS. Improper time and date setting may lead to certificate rejection.

- Require Authentication over HTTP/HTTPS: authentication helps limit the access to the device by setting a username (admin) and password. For more details, see the Basic Authentication section. No password is set by default, the authentication can be enabled after setting a password.
- Restart HTTP(S) Services is required after the authentication settings changed.

Serial over IP

The signal route of the serial-IP transmission can be broken by disabling the serial over 8001 or 8002 port.

For more details about the RS-232, see the Serial Interface section.

LW3

Enable LW3 over 6107: LW3 protocol commands, Lightware Device Controller software.

WARNING! Lightware Device Controller software operates on 6107 port, when it is disabled, the MMX2 series switcher can be controlled only with protocol commands via http(s). Reset to Factory Default Settings can re-enable the network interfaces.

Credentials

The authentication password can be set here for HTTP/HTTPS ports. The following characters are allowed: Letters (A-Z) and (a-z) and numbers (0-9). Max length: 100 characters. The device does not store the password string, so it can not be queried. #password

ATTENTION! Authentication feature in MMX2 series is not equal to the Cleartext login feature in the Advanced Control Pack in the TPS family extenders.

#dhcp #ipaddress #network #portblock #network #ipaddress #http #https
5.10.3. System

The following functions are available under System tab:

- **Support package** - saving a log file of the device, helps during the troubleshooting process
- **Load factory defaults** - recalling factory default settings and values. All factory default settings are listed in the Factory Default Settings section.
- **Reboot** - rebooting the system.
- **Set time** - (internal) clock of the switcher, which is used for logging events.
- **Pressing the Sync with Computer button** is a quick and easy way to set the time.

**ATTENTION!** Please ensure proper time and date setting in the device, because it affects the self-signed certificate (SSL) generation when using WSS or HTTPS. Improper time and date setting may lead to certificate rejection.

**Script management**

This interface is for running custom zipped file which is made by Lightware for special request.

Add a tick to enable the Run script. It means that the script runs until another script is uploaded or this function is disabled.

Click on the Upload File to browse a zipped file. It will replace the previous one.

**Clone configuration**

Clone configuration makes saving all the LW3 settings, custom scripts and welcome screen image and uploading them to another device possible.

**ATTENTION!** Please note that clone configuration function operates properly when the same firmware version is installed on the devices.

**Create a configuration clone file**

Click on the Download Clone File button to save the setting to the computer.

**Restore a configuration from a clone file**

**Step 1.** Choose the desired network setting from the drop down menu:

- Keep unchanged.
- Restore from clone file (hostname will change, because the hostname property is also cloned from the original device and it can affect the generated certificates of the 443 port).
- Set to DHCP mode.
- Set to custom non-DHCP mode (in this case additional settings required: IP Address, Subnet Mask, Gateway Address).

**INFO:** The network settings relates to Static or DHCP setting/ IP address/ Subnet mask/ Gateway address and the hostname property. Network service settings (enable http(s) ports, authentication etc.) will be always restored.

**Step 2.** Click on the Select file button to browse a clone file from the PC.

**Step 3.** The cloning process will start by clicking on Restore button.
5.11. Advanced View Window

1. **LW3 protocol help**
   Pushing the button results in a help window opening, which describes the most important information about LW3 protocol commands in HTML format.

2. **Edit mode**
   The default appearance is the read-only mode. If you want to modify the values or parameters, tick the option. You will be prompted to confirm your selection.

3. **Warning mode**
   If this is checked, a warning window pops up when you enable Edit mode.

4. **Terminal window**
   Commands and responses with time and date are listed in this window. Sent command starts with ‘>’ character, received response starts with ‘<’ character. The color of each item depends on the type of the command and response. The content of the window can be emptied by the Clear button. If the Autoscroll option is ticked, the list is scrolled automatically when a new line is added.

5. **Command line**
   Type the desired command and execute it by the Send button. Clear all current commands and responses in the Terminal window by the Clear button. The commands typed in this line are not escaped automatically.

6. **Protocol tree**
   LW3 protocol tree; select an item to see its content.

7. **Node list**
   Correspondent parameters and nodes are shown that are connected to the selected item in the protocol tree. The commands typed in these fields are escaped automatically.

- **Manual button**: Manual (short description) of the node can be called and displayed in the terminal window.
- **Set button**: Saves the value/parameter typed in the textbox.
- **Call button**: Calls the method, e.g. reloads factory default settings.
Lightware REST API Reference

The device can be controlled through standard HTTP(S) requests to ensure the control functions from web browsers or terminal program.

- Overview
- Instructions for the Terminal Application Usage
- Protocol Rules
- REST API Security
- System Commands
- Video Port Settings - General
- CEC Command Sending
- Audio Port Settings
- EDID Management
- Ethernet Port Configuration
- Network Security
- Serial Port Configuration
- Serial Port Messaging
- GPIO Port Configuration
- OCS Port Configuration
- Lightware REST API Quick Summary
6.1. Overview

The Lightware REST API is designed to provide a platform-free interface, where the MMX2 series switchers can be controlled by HTTP requests. REST API is a software architectural style based on HTTP protocol, so it can be used via web browser, Node.js, terminal programs.

The MMX2 series device provides a REST API server where most of the LW3 commands are available (for more details, see the Lightware REST API vs. LW3 Protocol section).

Lightware devices can be controlled with LW3 protocol commands (for more details, see the LW3 Programmers' Reference), LW3 protocol consist of read-only, read-write properties and methods, which operate the same way as REST API GET/POST methods. This is not a new protocol, the LW3 tree structure became available via HTTP(s).

6.2. Instructions for the Terminal Application Usage

6.2.1. Web Browser Plugins

REST API interface can be easily accessed via a web browser's plugin, see the example below:

RESTClient plugin for Mozilla Firefox

6.2.2. Terminal Application

The REST API requests can be applied to the switcher using a terminal application. You need to install one of them to your control device, for example, Putty, CLI or Curl.

Curl

Curl is a command line tool that can also connect to the MMX2 REST SERVER and display communication in a terminal window. It supports data transferring with HTTP and HTTPS standards and handles the basic authentication (username and password) in Windows® and Linux operating systems. Multi-line commands are also accepted, so a script can be stored in a .txt file for future reference.

Check if the Curl package is installed on your system. Type into your console:

```bash
curl
```

When the answer is 'curl: try 'curl --help' for more information', curl is installed.

Some web browser plugins (e.g. REST Client) display the curl version of the sent request.

Once the terminal window is opened, you can enter the commands. Some typical examples are listed in the following section.

REST API communication in a command line window
GET Command Example
Query the Signal Presence

C: curl -i -X GET <ip>/api/<NodePath>/<PropertyName>
C:

```
HTTP/1.1 200 OK
X-Powered-By: Express
Content-Type: application/json; charset=utf-8
Content-Length: 5
ETag: W/"5-fLbvuYullyqbUJDcLlF/4U0SywQ"
Date: Sat, 13 May 2034 13:39:24 GMT
cache-control: max-age=86400,private
Server: lighttpd/1.4.56
```

POST Command Example 1.
Set the Mute State

C: curl -X POST -i <ip>/api/<NodePath>/<PropertyName> --data <value>
C:

```
C:\Users>curl -X POST -i http://192.168.0.55/api/V1/MEDIA/VIDEO/XP/I2/Mute --data true
HTTP/1.1 200 OK
X-Powered-By: Express
Content-Type: text/html; charset=utf-8
Content-Length: 5
ETag: W/"5-hg914ZeUflab5o9bn2uUeaPo3CI"
Date: Sat, 13 May 2034 13:48:09 GMT
cache-control: max-age=86400,private
Server: lighttpd/1.4.56
```

POST Command Example 2.
Switch video crosspoint

C: curl -X POST -i <ip>/api/<NodePath>/<PropertyName> --data <value>
C:

```
C:\Users>curl -X POST -i http://192.168.0.55/api/V1/MEDIA/VIDEO/XP/switch --data I2:O1
HTTP/1.1 200 OK
X-Powered-By: Express
Content-Type: text/plain; charset=utf-8
Content-Length: 2
ETag: W/"2-nOO9QiTIwXgNtWtBJezz8kv3SLc"
Date: Sat, 13 May 2034 14:02:01 GMT
cache-control: max-age=86400,private
Server: lighttpd/1.4.56
OK
```

POST Command with Basic Authentication Example
Switch video crosspoint

C: curl --user <username>:<password> -X POST -i <ip>/api/<NodePath>/<PropertyName> --data <value>
C:

```
```

HTTPS Command Example 2.
Switch video crosspoint

C: curl -X POST -k -i <ip>/api/<NodePath>/<PropertyName> --data <value>
C:

```
C:\Users>curl -X POST -k -i https://192.168.0.110/api/V1/MEDIA/VIDEO/XP/switch --data I2:O1
HTTP/1.1 200 OK
X-Powered-By: Express
Content-Type: text/plain; charset=utf-8
Content-Length: 2
ETag: W/"2-nOO9QiTIwXgNtWtBJezz8kv3SLc"
Date: Sun, 28 May 2034 12:28:20 GMT
cache-control: max-age=86400,private
Server: lighttpd/1.4.56
OK
```

Applied firmware package: v1.4.0b4 | LDC software: v2.5.17b2
6.3. Protocol Rules

6.3.1. Command Structure Example

The examples below show how to apply the REST API in different environments:

Curl in Command Line Terminal

```bash
$ curl -X POST -i http://192.168.0.55/api/V1/MEDIA/VIDEO/XP/switch --data I2:O1
```

REST API Client in Mozilla

- **Method**: POST
- **URL**: http://192.168.0.55/api/V1/MEDIA/VIDEO/XP/switch
- **Body content type**: text/plain
- **Body**: I2:O1

6.3.2. General Rules

- All names and parameters are case-insensitive.
- The methods, nodes and properties are separated by a slash ('/') character.
- The node name consists of letters of the English alphabet and numbers.
- All properties and methods are available HTTP(S) below /api as an URL.
- The HTTP server is available on port 80, the HTTPS server is available on port 443.
- GET / PUT / POST methods are supported.
- Header contains the IP address (or hostname) and the nodepath.
- Arguments and property values should be given in the HTTP request's body as a plain text.
- REST API - LW3 converter does escaping automatically.
- The node paths describe the exact location of the node, listing each parent node up to the root.
- The supported HTTP protocol: standard HTTP/1.1
- There is no maximum size or character length of the request.

6.3.3. Legend for the Control Commands

**Command and Response – Example**

- **header**: GET·<ip>/api/V1/MEDIA/VIDEO/<in>/SignalPresent·HTTP/1.1
- **body**: <status code>

<table>
<thead>
<tr>
<th>Format</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;ip&gt;</td>
<td>IP address or hostname of the target device</td>
</tr>
<tr>
<td>&lt;in&gt;</td>
<td>Input port number</td>
</tr>
<tr>
<td>&lt;out&gt;</td>
<td>Output port number</td>
</tr>
<tr>
<td>&lt;port&gt;</td>
<td>Input or output port number</td>
</tr>
<tr>
<td>&lt;loc&gt;</td>
<td>Location number</td>
</tr>
<tr>
<td>&lt;parameter&gt;</td>
<td>Variable defined and described in the command</td>
</tr>
<tr>
<td>&lt;expression&gt;</td>
<td>Batched parameters: the underline means that more expressions or parameters can be placed by using a semicolon, e.g. I2;I4 or F27:E1;F47:E2</td>
</tr>
</tbody>
</table>

Further, not listed <parameters> are defined at each commands.

6.3.4. Lightware REST API vs. LW3 Protocol

All methods and properties of the LW3 tree structure appear below /api as a HTTP(s) URL. The separator character is always a slash ('/') character instead of point ('.') and colon (':'). The URL is case-insensitive.

**Example**

The LW3 property:

```
/V1/MEDIA/VIDEO/I2.ActiveResolution
```

Available in REST API:

- 192.168.0.1/api/V1/MEDIA/VIDEO/I1/ActiveResolution
- 192.168.0.1/api/v1/media/video/i1/activeresolution

The following features are implemented only in REST API, but not in LW3 protocol:

- **Sending a Message via RS-232**

The most important commands are listed in this chapter. Other commands can be inferred by the LW3 tree structure, where the read-only (e.g. pr /V1/MEDIA/VIDEO/I4.Connected) and read-write properties (pw /V1/MEDIA/VIDEO/I4.Name) can be listed. For more details about LW3 tree structure, see the LW3 Programmers' Reference section or the Advanced View Window.
6.3.5. Method Types

GET method

GET method can be used to get the value of a property. It works the same way as the LW3 GET command.

PUT/POST method

In this case, POST and PUT are equivalent, they are for modifying read-write properties and invoking methods. They replace LW3 SET and CALL command.

6.3.6. Supported Commands

Querying property value (GET)

The requested value is in the body of the response.

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>REST API</td>
<td>GET &lt;ip&gt;/api/&lt;NODEPATH&gt;/&lt;PropertyName&gt; HTTP/1.1</td>
</tr>
<tr>
<td>Example</td>
<td>GET <a href="http://192.168.0.1/api/V1/MEDIA/VIDEO/XP/I2/SignalPresent">http://192.168.0.1/api/V1/MEDIA/VIDEO/XP/I2/SignalPresent</a> HTTP/1.1</td>
</tr>
<tr>
<td>LW3</td>
<td>GET &lt;NODEPATH&gt;,&lt;PropertyName&gt;</td>
</tr>
<tr>
<td>Example</td>
<td>GET /V1/MEDIA/VIDEO/XP/I2.SignalPresent</td>
</tr>
</tbody>
</table>

Setting property value (SET)

The desired property value should be given as a plain text in the body of the request. The new value is in the body of the response.

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>REST API</td>
<td>POST &lt;ip&gt;/api/&lt;NODEPATH&gt;/&lt;PropertyName&gt; HTTP/1.1 &lt;new_value&gt;</td>
</tr>
<tr>
<td>Example</td>
<td>POST <a href="http://192.168.0.1/api/V1/MEDIA/VIDEO/XP/I2/Mute">http://192.168.0.1/api/V1/MEDIA/VIDEO/XP/I2/Mute</a> HTTP/1.1 false</td>
</tr>
<tr>
<td>LW3</td>
<td>SET &lt;NODEPATH&gt;,&lt;PropertyName&gt;=&lt;new_value&gt;</td>
</tr>
<tr>
<td>Example</td>
<td>SET /V1/MEDIA/VIDEO/XP/I2.Mute=false</td>
</tr>
</tbody>
</table>

Invoking method (CALL)

The argument should be given in the body of the request.

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>REST API</td>
<td>POST &lt;ip&gt;/api/&lt;NODEPATH&gt;/&lt;methodName&gt; HTTP/1.1 &lt;new_value&gt;</td>
</tr>
<tr>
<td>Example</td>
<td>POST <a href="http://192.168.0.1/api/V1/MEDIA/VIDEO/XP/switch">http://192.168.0.1/api/V1/MEDIA/VIDEO/XP/switch</a> HTTP/1.1</td>
</tr>
<tr>
<td>LW3</td>
<td>CALL &lt;NODEPATH&gt;,&lt;methodName&gt;=(value)</td>
</tr>
<tr>
<td>Example</td>
<td>CALL /V1/MEDIA/VIDEO/XP.switch(5:01)</td>
</tr>
</tbody>
</table>

6.3.7. Not Supported Commands

Querying node (GET)

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>REST API</td>
<td>Not supported</td>
</tr>
<tr>
<td>LW3</td>
<td>GET /&lt;NODEPATH&gt;</td>
</tr>
<tr>
<td>Example</td>
<td>GET /V1/MEDIA/VIDEO</td>
</tr>
</tbody>
</table>

Subscribing to a node (OPEN)

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>REST API</td>
<td>Not interpreted</td>
</tr>
<tr>
<td>LW3</td>
<td>OPEN /&lt;NODEPATH&gt;</td>
</tr>
<tr>
<td>Example</td>
<td>OPEN /V1/MEDIA/VIDEO</td>
</tr>
</tbody>
</table>

Unsubscribing from a Node (CLOSE)

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>REST API</td>
<td>Not interpreted</td>
</tr>
<tr>
<td>LW3</td>
<td>CLOSE /&lt;NODEPATH&gt;</td>
</tr>
<tr>
<td>Example</td>
<td>CLOSE /V1/MEDIA/VIDEO</td>
</tr>
</tbody>
</table>

6.3.8. Status Codes, Error Messages

The standard HTTP response codes are defined to supply information about the response and the executed command like:

<table>
<thead>
<tr>
<th>Error code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>OK Standard response for successful HTTP request.</td>
</tr>
<tr>
<td>401</td>
<td>Unauthorized</td>
</tr>
<tr>
<td>405</td>
<td>Method Not Allowed A request method is not supported for the requested resource. This is the error code when trying to modify a read-only property.</td>
</tr>
<tr>
<td>404</td>
<td>Not Found Invalid nodepath or property name.</td>
</tr>
<tr>
<td>406</td>
<td>Not Acceptable LW3 server error response for POST and PUT method, equals the following LW3 error codes: pE: an error for the property mE: an error for a method</td>
</tr>
<tr>
<td>500</td>
<td>Internal Server Error All other errors (Lw3ErrorCodes_InternalError).</td>
</tr>
</tbody>
</table>

6.3.9. Polling

Subscription and unsubscription features are not supported, they can be substituted with polling. It means that a custom user script sends a request for a detected property from time to time.
6.4. REST API Security

The REST API is designed with two security features: **Authentication** and **Encryption**. Both of them are optional and can be used independently of each other.

### 6.4.1. Authentication

Basic access authentication is designed to limit user access for the REST API server. It requires user authentication by using a password (username is fixed).

Follow the instructions below to set the password:

**Step 1.** Set the password.

- **header:** POST <ip>/api/V1/MANAGEMENT/NETWORK/AUTHENTICATION/setPassword HTTP/1.1
- **body:** <new_password>

**Step 2.** Enable the basic authentication on the chosen port (HTTP: 80 or HTTPS: 443).

- **header:** POST <ip>/api/V1/MANAGEMENT/NETWORK/SERVICES/HTTP/AuthenticationEnabled HTTP/1.1
- **body:** true

**Step 3.** Restart network services.

- **header:** POST <ip>/api/V1/MANAGEMENT/NETWORK/SERVICES/HTTP/restart HTTP/1.1

**ATTENTION!** The password will not be encrypted by this authentication mode, it remains accessible when the communication happens on HTTP.

For more details, see the **Basic Authentication** section.

### 6.4.2. Encryption (HTTPS)

There is no encryption when the REST API communication happens via HTTP, because the HTTP protocol is not encrypted. The REST API server is available via HTTPS on the 443 port. To avoid the data interception (e.g. stealing the password) HTTP should be disabled and HTTPS protocol used instead.

**ATTENTION!** Please ensure proper time and date setting in MMX2, because it affects the self-signed certificate (SSL) generation when using WSS or HTTPS. Improper time and date setting may lead to certificate rejection.

HTTPS does not guarantee that the communication is secure. Make sure that the client communicates with the server directly, without any third-party element in the communication route (Man-in-the-middle attack).

For more details, see the **Encryption (HTTPS, WSS)** section.
6.5. System Commands

6.5.1. Setting the Device Label

INFO: The device label can be changed to a custom text in the Status tab of the LDC software.

Request and Response

<table>
<thead>
<tr>
<th>#devicelabel</th>
<th>#label</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST <code>http://&lt;ip&gt;/api/V1/MANAGEMENT/LABEL/DeviceLabel</code></td>
<td>HTTP/1.1</td>
</tr>
<tr>
<td>header: &lt;custom_name&gt;</td>
<td></td>
</tr>
<tr>
<td>body:</td>
<td>&lt;custom_name&gt;</td>
</tr>
</tbody>
</table>

INFO: The Device Label can be 49 character long and ASCII characters are allowed. Longer names are truncated.

Example

| header: | POST `http://192.168.0.50/api/V1/MANAGEMENT/LABEL/DeviceLabel` | HTTP/1.1 |
| body: | MMX2room |
| header: | 200 OK |
| body: | MMX2room |

6.5.2. Resetting the Device

The switcher can be restarted — the current connections will be terminated.

Request and Response

<table>
<thead>
<tr>
<th>#reboot</th>
<th>#restart</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST <code>http://&lt;ip&gt;/api/V1/SYS/restart</code></td>
<td>HTTP/1.1</td>
</tr>
<tr>
<td>header:</td>
<td>200 OK</td>
</tr>
</tbody>
</table>

Example

| header: | POST `http://192.168.0.50/api/V1/SYS/restart` | HTTP/1.1 |
| body: | 200 OK |

6.5.3. Restoring the Factory Default Settings

Request and Response

<table>
<thead>
<tr>
<th>#factory</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST <code>http://&lt;ip&gt;/api/V1/SYS/factoryDefaults</code></td>
</tr>
<tr>
<td>header:</td>
</tr>
</tbody>
</table>

Example

| header: | POST `http://192.168.0.50/api/V1/SYS/factoryDefaults` | HTTP/1.1 |
| body: | 200 OK |

The device is restarted, current connections are terminated, and the default settings are restored. See the complete list in the Factory Default Settings section.

6.5.4. Querying the Firmware Package Version

Request and Response

<table>
<thead>
<tr>
<th>#firmwareversion</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET <code>http://&lt;ip&gt;/api/V1/MANAGEMENT/UID/PACKAGE/Version</code></td>
</tr>
<tr>
<td>header:</td>
</tr>
<tr>
<td>body:</td>
</tr>
</tbody>
</table>

Example

| header: | GET `http://192.168.0.50/api/V1/MANAGEMENT/UID/PACKAGE/Version` | HTTP/1.1 |
| body: | 1.3.3b3 |

6.5.5. Control Lock

Enable/disable the operation of the front panel buttons.

Request and Response

<table>
<thead>
<tr>
<th>#lockbutton</th>
<th>#buttonlock</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST <code>http://&lt;ip&gt;/api/V1/MANAGEMENT/UI/ControlLock</code></td>
<td>HTTP/1.1</td>
</tr>
<tr>
<td>header:</td>
<td>200 OK</td>
</tr>
<tr>
<td>body:</td>
<td>&lt;lock_status&gt;</td>
</tr>
</tbody>
</table>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;lock_status&gt;</td>
<td>Front panel button locking status</td>
<td>None</td>
<td>None: all functions of the front panel button are enabled.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>locked</td>
<td>The front panel buttons are locked, and can be unlocked by a button combination (Control Lock).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>force locked</td>
<td>The front panel buttons are locked and cannot be unlocked by a button combination, only in LDC (on the Status tab) or using the LW3 command (or REST API).</td>
</tr>
</tbody>
</table>

Example

| header: | POST `http://192.168.0.50/api/V1/MANAGEMENT/UI/ControlLock` | HTTP/1.1 |
| body: | force locked |
| header: | 200 OK |
| body: | Force locked |
6.5.6. Setting the Current Time

**Request and Response**

```
#time

<table>
<thead>
<tr>
<th>header</th>
<th>POST http://&lt;ip&gt;/api/V1/MANAGEMENT/DATETIME/setTime HTTP/1.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>&lt;current_time&gt;</td>
</tr>
</tbody>
</table>
```

**Parameters**

- `<current_time>`: The new router time in ISO 8601 date time format.

**Example**

```
<table>
<thead>
<tr>
<th>header</th>
<th>POST <a href="http://192.168.0.50/api/V1/MANAGEMENT/DATETIME/setTime">http://192.168.0.50/api/V1/MANAGEMENT/DATETIME/setTime</a> HTTP/1.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>2034-05-06T14:47:25</td>
</tr>
</tbody>
</table>
```

**Response**

```
<table>
<thead>
<tr>
<th>header</th>
<th>200 OK</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>OK</td>
</tr>
</tbody>
</table>
```

6.5.7. Identifying the Device

Calling the method makes the status LEDs blink for 10 seconds. The feature helps to find the device physically.

**Request and Response**

```
#identifyme

<table>
<thead>
<tr>
<th>header</th>
<th>POST http://&lt;ip&gt;/api/V1/MANAGEMENT/UI/identifyMe HTTP/1.1</th>
</tr>
</thead>
</table>
```

**INFO:** The body has to be empty, and the content type should be text/plain.

**Example**

```
<table>
<thead>
<tr>
<th>header</th>
<th>POST <a href="http://192.168.0.50/api/V1/MANAGEMENT/UI/identifyMe">http://192.168.0.50/api/V1/MANAGEMENT/UI/identifyMe</a> HTTP/1.1</th>
</tr>
</thead>
</table>
```

**Response**

```
<table>
<thead>
<tr>
<th>header</th>
<th>200 OK</th>
</tr>
</thead>
</table>
```

6.5.8. Toggling the Dark Mode Setting

The LEDs of the device can be switched off, if their light could be annoying. In Dark mode, all the LEDs are switched off, except the LEDs of the RJ45 connectors (Ethernet and TPS in).

**Request and Response**

```
#darkmode

<table>
<thead>
<tr>
<th>header</th>
<th>POST http://&lt;ip&gt;/api/V1/MANAGEMENT/UI/DARKMODE/Enable HTTP/1.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>&lt;mode_state&gt;</td>
</tr>
</tbody>
</table>
```

**Parameters**

- `<mode_state>`: The Dark mode function is enabled, if the parameter is true (or 1), and disabled, if the parameter is false (or 0).

**Example**

```
<table>
<thead>
<tr>
<th>header</th>
<th>POST <a href="http://192.168.0.50/api/V1/MANAGEMENT/UI/DARKMODE/Enable">http://192.168.0.50/api/V1/MANAGEMENT/UI/DARKMODE/Enable</a> HTTP/1.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>true</td>
</tr>
</tbody>
</table>
```

6.5.9. Setting the Delay of the Dark Mode

The Dark mode can be enabled right away, or after a certain time. Thus, the mode is enabled if no buttons are pressed for a while. Pressing any button brings back the status info on the LEDs without performing the function of the button itself. The delay time can be set by this command.

**Request and Response**

```
#darkmode_delay

<table>
<thead>
<tr>
<th>header</th>
<th>POST http://&lt;ip&gt;/api/V1/MANAGEMENT/UI/DARKMODE/Delay HTTP/1.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>&lt;delay_time&gt;</td>
</tr>
</tbody>
</table>
```

**Parameters**

- `<delay_time>`: The parameter means seconds, and the default value is 0. If set to 0, no delay is applied, and the Dark mode can be enabled immediately by the DarkModeEnable property. This delay has an affect to the wakeFromDarkMode method as well.

**Example**

```
<table>
<thead>
<tr>
<th>header</th>
<th>POST <a href="http://192.168.0.50/api/V1/MANAGEMENT/UI/DARKMODE/Delay">http://192.168.0.50/api/V1/MANAGEMENT/UI/DARKMODE/Delay</a> HTTP/1.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>10</td>
</tr>
</tbody>
</table>
```

**Response**

```
<table>
<thead>
<tr>
<th>header</th>
<th>200 OK</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>10</td>
</tr>
</tbody>
</table>
```
6.6. Video Port Settings - General

6.6.1. Switching Video Input

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/VIDEO/XP/switch HTTP/1.1
- body: <in><out>
- header: 200 OK

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/switch HTTP/1.1
- body: I5:O1
- header: 200 OK

INFO: When using the '0' value as an input, the input will be disconnected and no signal will appear on the output.

ATTENTION! Video crosspoint has a limitation: I1 and I5 ports are not available at the same time, only one of them can be selected to any output. When one of the outputs is switched to I1 or I5, the other output cannot be switched to I1 or I5. In this case the switch command returns an error message.

Example

- header: GET http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/O1/ConnectedSource HTTP/1.1
- body: I5
- header: GET http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/O2/ConnectedSource HTTP/1.1
- body: I5
- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/switch HTTP/1.1
- body: I1:O1
- header: 405 Method Not Allowed

6.6.2. Switching an Input to All Outputs

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/VIDEO/XP/switchAll HTTP/1.1
- body: <ip>
- header: 200 OK

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/switchAll HTTP/1.1
- body: I1
- header: 200 OK

6.6.3. Locking the Video Port

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/VIDEO/XP/<port>/Lock HTTP/1.1
- body: <locked_state>
- header: 200 OK
- body: <locked_state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;locked_state&gt;</td>
<td>Locked state</td>
<td>true</td>
<td>The port is locked</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The port is unlocked</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/I2/Lock HTTP/1.1
- body: false
- header: 200 OK
- body: false

6.6.4. Muting the Video Port

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/VIDEO/XP/<port>/Mute HTTP/1.1
- body: <muted_state>
- header: 200 OK
- body: <muted_state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;muted_state&gt;</td>
<td>Muted state</td>
<td>true</td>
<td>The port is locked</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The port is unlocked</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/I2/Mute HTTP/1.1
- body: false
- header: 200 OK
- body: false
6.6.5. Setting the Autoselect Policy

Request and Response

- header: POST http://<ip>/API/V1/MEDIA/VIDEO/AUTOSELECT/<out>/Policy HTTP/1.1
- body: <autoselect_mode>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/AUTOSELECT/O2/Policy HTTP/1.1
- body: <autoselect_mode>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;autoselect_mode&gt;</td>
<td>The autoselect policy</td>
<td>Off</td>
<td>The autoselect function is disabled.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Last Detect</td>
<td>It is always the last attached input that is automatically switched to the output.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>First Detect</td>
<td>The first active video input is selected.</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/AUTOSELECT/O2/Policy HTTP/1.1
- body: First detect

6.6.6. Changing the Autoselect-Included Input Ports

Request and Response

- header: POST http://<ip>/API/V1/MEDIA/VIDEO/AUTOSELECT/<out>/Included HTTP/1.1
- body: <state>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/AUTOSELECT/O2/Included HTTP/1.1
- body: <state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;state&gt;</td>
<td>The chosen input is ignored in the autoselect process or not.</td>
<td>true</td>
<td>The port is included in autoselect.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The autoselect function ignores that port.</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/AUTOSELECT/O2/I1/Included HTTP/1.1
- body: false

6.6.7. Changing the Input Port Priority

Request and Response

- header: POST http://<ip>/API/V1/MEDIA/VIDEO/AUTOSELECT/<out>/<in>/Priority HTTP/1.1
- body: <prio_num>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/AUTOSELECT/O2/I2/Priority HTTP/1.1
- body: 51

Parameters

The <prio> parameter means the priority number from 1 to 100, equal numbers are allowed. Inputs can have different priorities in relation with two or more outputs. Therefore the output port number is part of the node path of input port priorities.

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/AUTOSELECT/O2/I2/Priority HTTP/1.1
- body: 51

6.6.8. Querying the Connected Source

Request and Response

- header: GET http://<ip>/API/V1/MEDIA/VIDEO/XP/<out>/ConnectedSource HTTP/1.1
- body: <in>

Example

- header: GET http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/O2/ConnectedSource HTTP/1.1
- body: I1

6.6.9. Querying the Connected Destinations

Request and Response

- header: GET http://<ip>/API/V1/MEDIA/VIDEO/XP/<in>/ConnectedDestinations HTTP/1.1
- body: ["<out1>";"<out1>]

Example

- header: GET http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/I3/ConnectedDestinations HTTP/1.1
- body: ['I1','I2']
### 6.6.10. Querying the Input Switching Capability

Video crosspoint has a limitation: I1 or I5 ports can not be selected to any output at the same time. *Busy* value of the switchable property refers to the limitation.

**Request and Response**

- header: GET `http://<ip>/api/V1/MEDIA/VIDEO/XP/<out>/SWITCHABLE/<in>` HTTP/1.1
- header: 200 OK
- body: `<switchable_state>`

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;switchable_state&gt;</code></td>
<td>The chosen input is can be switched to the output or not.</td>
<td>OK</td>
<td>The connection of the chosen input and output is allowed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Busy</td>
<td>The chosen input can not be switched to the output.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Locked</td>
<td>The chosen input can not be switched to the output, because input is locked.</td>
</tr>
</tbody>
</table>

**Example**

- header: GET `http://192.168.0.50/api/V1/MEDIA/VIDEO/XP/O2/SWITCHABLE/I1` HTTP/1.1
- header: 200 OK
- body: `Busy`

### 6.6.11. Querying the Video Signal Presence

**Request and Response**

- header: GET `http://<ip>/api/V1/MEDIA/VIDEO/<port>/SignalPresent` HTTP/1.1
- header: 200 OK
- body: `Busy`

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;state&gt;</code></td>
<td>This property gives a feedback about the current signal presence of the port.</td>
<td>true</td>
<td>The video signal is present.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The video signal is not present.</td>
</tr>
</tbody>
</table>

**Example**

- header: GET `http://192.168.0.50/api/V1/MEDIA/VIDEO/I1/SignalPresent` HTTP/1.1
- header: 200 OK
- body: `true`

### 6.6.12. HDCP Setting (Input Port)

HDCP capability can be set on the input ports thus, non-encrypted content can be seen on a non-HDCP compliant display. See more information in the [HDCP Management] section.

**ATTENTION!** HDCP 2.2 signal handling is limited to up to two input ports at the same time.

**Request and Response**

- header: POST `http://<ip>/api/V1/MEDIA/VIDEO/<in>/HDCP/AllowedHdcpVersion` HTTP/1.1
- body: `<allowed_hdcp>`
- header: 200 OK
- body: `<allowed_hdcp>`

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;allowed_hdcp&gt;</code></td>
<td>The input port reports the HDCP capability.</td>
<td>HDCP 1.4</td>
<td>The input port reports HDCP 1.4 capability.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>HDCP 2.2</td>
<td>The input port reports HDCP 2.2 capability.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Off</td>
<td>The input port reports non-HDCP compliance.</td>
</tr>
</tbody>
</table>

**Example**

- header: POST `http://192.168.0.50/api/V1/MEDIA/VIDEO/I1/HDCP/AllowedHdcpVersion` HTTP/1.1
- body: `HDCP 1.4`
6.6.13. HdcpMode

HDCP capability can be set to Auto/Always on the output ports thus, non-encrypted content can be transmitted to a non-HDCP compliant display. See more information in the HDCP Management section.

Request and Response

```plaintext
#hdcp

### header:
POST http://<ip>/api/V1/MEDIA/VIDEO/<out>/HdcpMode HTTP/1.1

### body:
<hdcp_mode>

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;hdcp_mode&gt;</td>
<td>HDCP encryption setting on the output port</td>
<td>Auto</td>
<td>The encryption is enabled on the output port if the signal on the input port is encrypted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Always</td>
<td>The outgoing signal is HDCP-encrypted.</td>
</tr>
</tbody>
</table>

Example

- **header:** POST http://192.168.0.50/api/V1/MEDIA/VIDEO/O1/HdcpMode HTTP/1.1
- **body:** Auto
- **header:** 200 OK
- **body:** <hdcp_mode>

Request and Response

```plaintext
GET http://<ip>/api/V1/MEDIA/VIDEO/<port>/EmbeddedAudioPresent HTTP/1.1
```

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;embedded_state&gt;</td>
<td>It shows if the video contains audio or not.</td>
<td>true</td>
<td>There is embedded audio in the video signal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>There is no embedded audio in the video signal.</td>
</tr>
</tbody>
</table>

Example

- **header:** GET http://192.168.0.50/api/V1/MEDIA/VIDEO/O2/EmbeddedAudioPresent HTTP/1.1
- **body:** 200 OK
- **body:** <embedded_state>

6.6.15. Muting Embedded Audio

Request and Response

```plaintext
POST http://<ip>/api/V1/MEDIA/VIDEO/<port>/EmbeddedAudioMute HTTP/1.1
```

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;mute_state&gt;</td>
<td>It shows if the embedded audio is muted or not.</td>
<td>true</td>
<td>The embedded audio is muted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The embedded audio is unmuted.</td>
</tr>
</tbody>
</table>

Example

- **header:** POST http://192.168.0.50/api/V1/MEDIA/VIDEO/O1/EmbeddedAudioMute HTTP/1.1
- **body:** true
- **header:** 200 OK
- **body:** <mute_state>

6.6.16. Setting Output Signal Type

Request and Response

```plaintext
POST http://<ip>/api/V1/MEDIA/VIDEO/<out>/OutputSignalType HTTP/1.1
```

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;signal_type&gt;</td>
<td>Signal type setting</td>
<td>Auto</td>
<td>The outgoing signal type is HDMI.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>DVI</td>
<td>The outgoing signal type is DVI.</td>
</tr>
</tbody>
</table>

Example

- **header:** POST http://192.168.0.50/api/V1/MEDIA/VIDEO/O1/OutputSignalType HTTP/1.1
- **body:** Auto
- **header:** 200 OK
- **body:** <signal_type>
6.6.17. Turning on Output 5V

The 5V power towards the sink can be enabled or disabled as follows:

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/VIDEO/<out>/Output5VMode HTTP/1.1
- body: <5V_pwr>

- header: 200 OK
- body: <5V_pwr>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;5V_pwr&gt;</td>
<td>5V power towards the sink</td>
<td>On</td>
<td>Enable 5V power on HDMI port</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Off</td>
<td>Disable 5V power on HDMI port</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/VIDEO/O1/Output5VMode HTTP/1.1
- body: On

- header: 200 OK
- body: On
6.7. CEC Command Sending

DIFFERENCE: This feature and the commands below are available from FW package v1.4.0b4. The device is able to send and receive Consumer Electronics Control (CEC) commands. This feature is for remote controlling the source or sink device. CEC is a bi-directional communication via the HDMI cable.

ATTENTION! To have a successful CEC command processing, the connected HDMI device must support CEC.

6.7.1. Simple CEC Code Sending

This command is for sending simple CEC commands to the connected sink device. In this case the <command> is sent in a CEC frame without any opcode. The command also allows sending many commands at once.

The commands can be sent by the following two formats – defined in the header:

▪ text/plain: hexa strings (as seen in the example)
▪ application/octet-stream: binary data that allows sending a file with the desired codes

Request and Response

* header: POST http://<ip>/api/V1/MEDIA/VIDEO/<port>/CEC/send
* body: <command>
* header: 200 OK
* body: <response>

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;port&gt;</td>
<td>Video output port</td>
<td>01-02*</td>
<td>Video output port number</td>
</tr>
<tr>
<td>&lt;command&gt; **</td>
<td>Two-digit-long hexa code to control the sink device</td>
<td>04</td>
<td>Power on</td>
</tr>
<tr>
<td></td>
<td></td>
<td>6D</td>
<td>Power off</td>
</tr>
<tr>
<td></td>
<td></td>
<td>38</td>
<td>Standby</td>
</tr>
<tr>
<td></td>
<td></td>
<td>82100</td>
<td>Select input 1</td>
</tr>
<tr>
<td></td>
<td></td>
<td>82200</td>
<td>Select input 2</td>
</tr>
<tr>
<td></td>
<td></td>
<td>823000</td>
<td>Select input 3</td>
</tr>
</tbody>
</table>

* It depends on the capabilities of the UCX device.
** The supported list of <commands> depends on the connected sink device.

The <response> can be:

<table>
<thead>
<tr>
<th>&lt;response&gt;</th>
<th>HTTP code</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACK</td>
<td>200</td>
<td>The transmission is successful</td>
</tr>
<tr>
<td>NACK</td>
<td>444</td>
<td>The command is not accepted</td>
</tr>
<tr>
<td>Timeout</td>
<td>408</td>
<td>Timeout</td>
</tr>
<tr>
<td>Internal Error</td>
<td>500</td>
<td>Other error</td>
</tr>
</tbody>
</table>

6.7.2. Remote Control Code Sending

This command is for sending the so-called ‘push-button-commands’. There is a range within the CEC commands for this purpose, e.g. volume up/down. With this method one <command> is put between the 0x44 and 0x45 opcodes in the background.

Request and Response

* header: POST http://<ip>/api/V1/MEDIA/VIDEO/<port>/CEC/sendUserControlClick
* body: <command>
* header: 200 OK
* body: <response>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;port&gt;</td>
<td>Video output port</td>
<td>01-02*</td>
<td>Video output port number</td>
</tr>
<tr>
<td>&lt;command&gt; **</td>
<td>Two-digit-long hexa code to control the sink device</td>
<td>6D</td>
<td>Power on</td>
</tr>
<tr>
<td></td>
<td></td>
<td>6C</td>
<td>Power off</td>
</tr>
</tbody>
</table>

* It depends on the capabilities of the UCX device.
** The supported list of <commands> depends on the connected sink device.

The <response> can be the same as written at the previous command.

Example

* header: POST http://192.168.1.9/api/V1/MEDIA/VIDEO/O1/CEC/sendUserControlClick
* body: 6D
* header: 200 OK
* body: ACK
6.8. Audio Port Settings

6.8.1. Switching Audio Input

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/XP/switch HTTP/1.1
- body: `<audio_in>:O3`
- header: 200 OK
- body: `<audio_in>:O3`

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;audio_in&gt;</code></td>
<td>Audio input port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/XP/switch HTTP/1.1
- body: I2:O3
- header: 200 OK
- body: I2:O3

INFO: When using the '0' value as an input, the input will be disconnected and no signal will appear on the output.

ATTENTION! When I5 is selected for video source, the de-embedded audio of the I1 is not available because the video crosspoint has a limitation: I1 and I5 ports are not available at the same time, only one of them can be selected to any output. For more details about it see the port diagram in the Audio Interface section.

6.8.2. Querying the Connected Source

Request and Response

- header: GET http://<ip>/api/V1/MEDIA/AUDIO/XP/O3/ConnectedSource HTTP/1.1
- header: 200 OK
- body: `<audio_in>`

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;audio_in&gt;</code></td>
<td>Audio input port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
</tbody>
</table>

Example

- header: GET http://192.168.0.50/api/V1/MEDIA/AUDIO/XP/O3/ConnectedSource HTTP/1.1
- header: 200 OK
- body: I3

6.8.3. Querying the Connected Destinations

Request and Response

- header: GET http://<ip>/api/V1/MEDIA/AUDIO/XP/<audio_in>/ConnectedDestinations HTTP/1.1
- header: 200 OK
- body: `<audio_out>`

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;audio_in&gt;</code></td>
<td>Audio input port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
<tr>
<td><code>&lt;audio_out&gt;</code></td>
<td>Audio output port</td>
<td>O4</td>
<td>Audio output port number</td>
</tr>
</tbody>
</table>

Example

- header: GET http://192.168.0.50/api/V1/MEDIA/AUDIO/XP/I3/ConnectedDestinations HTTP/1.1
- header: 200 OK
- body: 03

6.8.4. Setting Autoselect Operation Mode

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/AUTOSELECT/O4/Policy HTTP/1.1
- header: 200 OK
- body: `<op_mode>`

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;op_mode&gt;</code></td>
<td>Operation mode</td>
<td>Follow video</td>
<td>Follows the video crosspoint state automatically.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Off</td>
<td>Autoselect function is disabled.</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/AUTOSELECT/O4/Policy HTTP/1.1
- header: Follow video
- body: Follow video
6.8.5. Setting the Followed Video Port to Autoselect

**Request and Response**

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/AUTOSELECT/O3/VideoFollowPort HTTP/1.1
- body: <out>
- header: 200 OK
- body: <out>

**Example**

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/AUTOSELECT/O3/VideoFollowPort HTTP/1.1
- body: 01
- header: 200 OK
- body: 01

6.8.6. Locking the Audio Port

**Request and Response**

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/XP/<audio_port>/Lock HTTP/1.1
- body: <locked_state>
- header: 200 OK
- body: <locked_state>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_port&gt;</td>
<td>Audio Port</td>
<td>I1-I4 O4</td>
<td>Audio input port number/ Audio output port number</td>
</tr>
<tr>
<td>&lt;locked_state&gt;</td>
<td>Locked state</td>
<td>true false</td>
<td>The port is locked/The port is unlocked</td>
</tr>
</tbody>
</table>

**Example**

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/XP/I2/Lock HTTP/1.1
- body: false
- header: 200 OK
- body: false

---

6.8.7. Muting the Audio Port

**INFO:** Suspends the connection of the chosen port (no signal is forwarded).

**Request and Response**

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/XP/<audio_port>/Mute HTTP/1.1
- body: <muted_state>
- header: 200 OK
- body: <muted_state>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_port&gt;</td>
<td>Audio Port</td>
<td>I1-I4 O4</td>
<td>Audio input port number/ Audio output port number</td>
</tr>
<tr>
<td>&lt;muted_state&gt;</td>
<td>Muted state</td>
<td>true false</td>
<td>The port is muted/The port is unmuted</td>
</tr>
</tbody>
</table>

**Example**

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/XP/I2/Mute HTTP/1.1
- body: false
- header: 200 OK
- body: false

---

**INFO:** All inputs and analog output ports have a mute property in the audio XP (e.g. http://<ip>/api/V1/MEDIA/AUDIO/XP/O1.Mute). Outputs have a separate mute function within the port node as well:

6.8.8. Muting the Audio Port 2

INFO: The volume of the analog audio output is set to low.

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/O4/Mute HTTP/1.1
- body: <muted_state>
- header: 200 OK
- body: <muted_state>

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_port&gt;</td>
<td>Audio Port</td>
<td>I1-44</td>
<td>Audio input port number</td>
</tr>
<tr>
<td></td>
<td></td>
<td>O4</td>
<td>Audio output port number</td>
</tr>
<tr>
<td>&lt;muted_state&gt;</td>
<td>Muted state</td>
<td>true</td>
<td>The port is muted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The port is unmuted.</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/O4/Mute HTTP/1.1
- body: false
- header: 200 OK
- body: false

6.8.9. Querying the Audio Signal Presence

Request and Response

- header: GET http://<ip>/api/V1/MEDIA/AUDIO/<audio_port>/SignalPresent HTTP/1.1
- header: 200 OK
- body: <signal_state>

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_port&gt;</td>
<td>USB Port</td>
<td>I1-44</td>
<td>Audio input port number</td>
</tr>
<tr>
<td></td>
<td></td>
<td>O4</td>
<td>Audio output port number</td>
</tr>
<tr>
<td>&lt;signal_state&gt;</td>
<td>Signal presence</td>
<td>true</td>
<td>The audio signal is present.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>No audio signal is present.</td>
</tr>
</tbody>
</table>

Example

- header: GET http://192.168.0.50/api/V1/MEDIA/AUDIO/I1/SignalPresent HTTP/1.1
- header: 200 OK
- body: false

6.8.10. Analog Audio Output Volume (dB) Setting

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/O4/VolumedB HTTP/1.1
- body: <level>
- header: 200 OK
- body: <level>

Parameter

The <level> parameter sets the output volume (attenuation) between -95.62 dB and 0 dB in step of -0.375 dB. The value is rounded up if necessary, to match with the step value.

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/O4/VolumedB HTTP/1.1
- body: -15
- header: 200 OK
- body: -15

6.8.11. Analog Audio Output Volume Percent Setting

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/O4/VolumePercent HTTP/1.1
- body: <percent>
- header: 200 OK
- body: <percent>

Parameters

The <percent> parameter sets the output volume (attenuation) between 100% and 0%, in step of 1%. The value is rounded up if necessary to match with the step value.

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/O4/VolumePercent HTTP/1.1
- body: 50
- header: 200 OK
- body: 50
6.8.12. Setting the Balance

**Request and Response**

`#balance`

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/O4/Balance HTTP/1.1
- body: <level>

**Parameters**

The `<level>` parameter sets the balance; -100 means left balance, 100 means right balance, step is 1. Center is 0 (default).

**Example**

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/O4/Balance HTTP/1.1
- body: 0

**6.8.13. Analog Audio Output Level Setting by Steps (dB)**

**Request and Response**

`#analogaudio`  `#volume`

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/O4/stepVolumedB HTTP/1.1
- body: <step>

**Parameters**

The volume is increased or decreased with the given `<step>` value in dB.

**Example**

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/O4/stepVolumedB HTTP/1.1
- body: -1
- header: 200 OK
- body: 0

**Request and Response**

`#analogaudio`  `#volume`

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/O4/stepVolumePercent HTTP/1.1
- body: <step>

**Parameters**

The volume is increased or decreased by the given `<step>` value in percent.

**Example**

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/O4/stepVolumePercent HTTP/1.1
- body: 5
- header: 200 OK
- body: OK

**6.8.15. Analog Audio Output Balance Setting by Steps**

**Request and Response**

`#analogaudio`  `#balance`

- header: POST http://<ip>/api/V1/MEDIA/AUDIO/O4/stepBalance HTTP/1.1
- body: <step>

**Parameters**

The volume is increased or decreased by the given `<step>` value.

**Example**

- header: POST http://192.168.0.50/api/V1/MEDIA/AUDIO/O4/stepBalance HTTP/1.1
- body: 5
- header: 200 OK
- body: OK

The volume is decreased with 1 dB, the current volume is -1.95 dB, which means 77.84% in percent.
6.9. EDID Management

6.9.1. Querying the Emulated EDIDs

Request and Response

```plaintext
#edid
```n

**Request:**

- header: GET http://<ip>/V1/EDID/EdidStatus HTTP/1.1
- body: 

**Response:**

- header: 200 OK
- body: 

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;source&gt;</td>
<td>Source EDID memory place</td>
<td>F1-F120</td>
<td>Factory EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>U1-U14</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>D1-D2</td>
<td>Dynamic EDIDs</td>
</tr>
</tbody>
</table>

**Example**

- header: GET http://192.168.0.50/api/V1/EDID/EdidStatus HTTP/1.1
- body: 

6.9.2. Querying the Validity of a Dynamic EDID

Request and Response

```plaintext
#validity
```n

**Request:**

- header: GET http://<ip>/V1/EDID/D/D1/Validity HTTP/1.1
- header: 200 OK

**Response:**

- header: 200 OK
- body: 

If the `<validity>` parameter is **true**, the EDID is valid. If the parameter is **false**, the EDID is invalid.

**Example**

- header: GET http://192.168.0.50/api/V1/EDID/D/D1/Validity HTTP/1.1
- header: 200 OK

6.9.3. Query the Preferred Resolution of a User EDID

Request and Response

```plaintext
#preferred_resolution
```n

**Request:**

- header: GET http://<ip>/V1/EDID/U/<user_edid>/PreferredResolution HTTP/1.1
- header: 200 OK
- body: 

**Example**

- header: GET http://192.168.0.50/api/V1/EDID/U/U2/PreferredResolution HTTP/1.1
- header: 200 OK
- body: 

INFO: Use the **Manufacturer** and **MonitorName** properties to query further information.

6.9.4. Emulating an EDID to an Input Port

Request and Response

```plaintext
#switch
```n

**Request:**

- header: POST http://<ip>/api/V1/EDID/switch HTTP/1.1
- body: `<source>:<destination>`
- header: 200 OK
- body: `<source>:<destination>`

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;source&gt;</td>
<td>Source EDID memory place</td>
<td>F1-F120</td>
<td>Factory EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>U1-U14</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>D1-D2</td>
<td>Dynamic EDIDs</td>
</tr>
</tbody>
</table>

**Example**

- header: POST http://192.168.0.50/api/V1/EDID/switch HTTP/1.1
- body: `<source>:<destination>`
- header: 200 OK
- body: `<source>:<destination>`

The 'Validity' property is true, valid EDID is stored in D1 memory place.
### 6.9.5. Emulating an EDID to All Input Ports

**Request and Response**

- **Header**: `POST http://<ip>/api/V1/EDID/switchAll` HTTP/1.1
- **Body**: `<source>`
- **Header**: 200 OK
- **Body**: OK

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;source&gt;</td>
<td>Source EDID memory place</td>
<td>F1-F148</td>
<td>Factory EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>U1-U100</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>D1-D2</td>
<td>Dynamic EDIDs</td>
</tr>
</tbody>
</table>

**Example**

- **Header**: `POST http://192.168.0.50/api/V1/EDID/switchAll` HTTP/1.1
- **Body**: F47
- **Header**: 200 OK
- **Body**: OK

### 6.9.6. Copying an EDID to User Memory

**Request and Response**

- **Header**: `POST http://<ip>/api/V1/EDID/copy` HTTP/1.1
- **Body**: `<source>:<destination>`
- **Header**: 200 OK
- **Body**: OK

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;source&gt;</td>
<td>Source EDID memory place</td>
<td>F1-F148</td>
<td>Factory EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>U1-U100</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>D1-D2</td>
<td>Dynamic EDIDs</td>
</tr>
</tbody>
</table>

**Example**

- **Header**: `POST http://192.168.0.50/api/V1/EDID/copy` HTTP/1.1
- **Body**: F1:U2
- **Header**: 200 OK
- **Body**: OK

### 6.9.7. Deleting an EDID from User Memory

**Request and Response**

- **Header**: `POST http://<ip>/api/V1/EDID/delete` HTTP/1.1
- **Body**: `<user_edid>`
- **Header**: 200 OK
- **Body**: OK

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;user_edid&gt;</td>
<td>The emulated EDID memory of the</td>
<td>U1-U14</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td>desired input port.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Example**

- **Header**: `POST http://192.168.0.50/api/V1/EDID/delete` HTTP/1.1
- **Body**: U2
- **Header**: 200 OK
- **Body**: OK

### 6.9.8. Resetting the Emulated EDIDs

**Request and Response**

- **Header**: `POST http://<ip>/api/V1/EDID/reset` HTTP/1.1
- **Body**: Empty
- **Header**: 200 OK
- **Body**: OK

**Example**

- **Header**: `POST http://192.168.0.50/api/V1/EDID/reset` HTTP/1.1
- **Body**: Empty
- **Header**: 200 OK
- **Body**: OK

Calling this method switches all emulated EDIDs to a factory default one. See the table in the Factory EDID List section.
6.10. Ethernet Port Configuration

6.10.1. Setting the DHCP State

ATTENTION! When you change a network property, the new value is stored, but the applySettings method must always be called to apply the new settings. When two or more network parameters are changed, the applySettings method is enough to be called once as a final step.

**Request and Response**

```
#dhcp #network #ipaddr

POST http://<ip>/api/V1/MANAGEMENT/NETWORK/DhcpEnabled HTTP/1.1
```

**Parameters**

If the <dhcp_status> parameter is true, the current IP address setting is DHCP, if the parameter is false, the current IP address is static.

**Example**

```
header:
  200 OK

body:
  <dhcp_status>
```

INFO: The applySettings method will save and apply the new value and will reboot the device.

INFO: The current setting can be queried by using the GET command.

6.10.2. Changing the IP Address (Static)

**Request and Response**

```
#ipaddress

POST http://<ip>/api/V1/MANAGEMENT/NETWORK/StaticIpAddress HTTP/1.1
```

**Example**

```
header:
  200 OK

body:
  192.168.0.100
```

INFO: The applySettings method will save and apply the new value and will reboot the device.

INFO: The current setting can be queried by using the GET command.

6.10.3. Changing the Subnet Mask (Static)

**Request and Response**

```
#ipaddress

POST http://<ip>/api/V1/MANAGEMENT/NETWORK/StaticNetworkMask HTTP/1.1
```

**Example**

```
header:
  200 OK

body:
  255.255.255.0
```

INFO: The applySettings method will save and apply the new value and will reboot the device.

INFO: The current setting can be queried by using the GET command.
6.10.4. Changing the Gateway Address (Static)

Request and Response

- **header:** POST http://<ip>/api/V1/MANAGEMENT/NETWORK/StaticGatewayAddress HTTP/1.1
- **body:** <gw_address>
- **header:** 200 OK
- **body:** <gw_address>

**Example**

- **header:** POST http://192.168.0.50/api/V1/MANAGEMENT/NETWORK/StaticGatewayAddress HTTP/1.1
- **body:** 192.168.0.1
- **header:** 200 OK
- **body:** 192.168.0.1
- **header:** POST http://192.168.0.50/api/V1/MANAGEMENT/NETWORK/applySettings HTTP/1.1
- **body:** 200 OK

INFO: The `applySettings` method will save and apply the new value and will reboot the device.

INFO: The current setting can be queried by using the `GET` command.

6.10.5. Applying Network Settings

Request and Response

- **header:** POST http://<ip>/api/V1/MANAGEMENT/NETWORK/applySettings HTTP/1.1

INFO: The body has to be empty, and the content type should be text/plain.

- **header:** 200 OK
- **body:** OK

**Example**

- **header:** POST http://192.168.0.50/api/V1/MANAGEMENT/NETWORK/applySettings HTTP/1.1
- **body:** room-switcher
- **header:** 200 OK
- **body:** room-switcher

All network settings that were changed are applied and network interface restarts.

6.10.6. Setting the Hostname

The host name is a property that can be used instead of the IP address when connecting to the device. It is also suitable for finding the device in the Device Discovery window of the LDC, see more details in the Add New Favorite Device section. Furthermore, it can be used to open the The Built-in Miniweb. If the IP address of the device is changing, the host name can be used as a fixed property.

After hostname changing, restarting network services is required. New SSL certificate will be generated.

Request and Response

- **header:** POST http://<ip>/api/V1/MANAGEMENT/NETWORK/HostName HTTP/1.1
- **body:** <unique_name>
- **header:** 200 OK
- **body:** <unique_name>

**Parameters**

The `<unique_name>` can be 1-64 character(s) long and the following are allowed for naming: the elements of the English alphabet and numbers. Hyphen (-) and dot (.) are also accepted, except as last character.

**Example**

- **header:** POST http://192.168.0.50/api/V1/MANAGEMENT/NETWORK/HostName HTTP/1.1
- **body:** room-switcher
- **header:** 200 OK
- **body:** room-switcher

All network settings that were changed are applied and network interface restarts.
6.11. Network Security

6.11.1. Enabling/Disabling Ethernet Port

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/ETHERNET/<ethernet_port>/Enabled HTTP/1.1
- body: <status>
- header: 200 OK
- body: <status>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;ethernet_port&gt;</td>
<td>Ethernet port number</td>
<td>P1-P3 (device-dependent)</td>
</tr>
<tr>
<td>&lt;status&gt;</td>
<td>The port is enabled. The port is disabled.</td>
<td>true false</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/ETHERNET/P1/Enabled HTTP/1.1
- body: false
- header: 200 OK
- body: false

6.11.2. Querying Network Service Port Number

Request and Response #http #https

- header: GET http://<ip>/api/V1/MANAGEMENT/NETWORK/SERVICES/<port>/Port HTTP/1.1
- header: 200 OK
- body: <port_num>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;port&gt;</td>
<td>Port type</td>
<td>HTTP HTTPS LW3 SERIAL1 SERIAL2</td>
</tr>
<tr>
<td>&lt;port_num&gt;</td>
<td>Port number</td>
<td>80 443 6187 8001 8002</td>
</tr>
</tbody>
</table>

Example

- header: GET http://192.168.0.50/api/V1/MANAGEMENT/NETWORK/SERVICES/HTTP/Port HTTP/1.1
- body: 80

6.11.3. Enabling/Disabling Network Service Port

Request and Response

- header: GET http://<ip>/api/V1/MANAGEMENT/NETWORK/SERVICES/<port>/Enabled HTTP/1.1
- body: <status>
- header: 200 OK
- body: <status>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;port&gt;</td>
<td>Port type</td>
<td>HTTP HTTPS</td>
</tr>
<tr>
<td>&lt;status&gt;</td>
<td>The port is enabled. The port is disabled.</td>
<td>true false</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MANAGEMENT/NETWORK/SERVICES/HTTP/Enabled HTTP/1.1
- body: false
- header: 200 OK
- body: false

6.11.4. Querying the Username for Authentication

INFO: MMX2 series deal with one user for authentication and the username (admin) can not be changed.

Request and Response

- header: GET http://<ip>/api/V1/MANAGEMENT/NETWORK/AUTH/USER1/Name HTTP/1.1
- body: admin

Example

- header: GET http://192.168.0.50/api/V1/MANAGEMENT/NETWORK/AUTH/USER1/Name HTTP/1.1
- body: admin
6.11.5. Setting Password for Authentication

INFO: Due to security reasons, the password is not stored in any property, so it can not be queried. No password is set for default, setting a password before authorizing the authentication is necessary.

Request and Response

**#password**

- **header:** POST http://<ip>/api/V1/MANAGEMENT/NETWORK/AUTH/USER1/setPassword HTTP/1.1
- **body:** <password>
- **header:** 200 OK
- **body:** <password>

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;password&gt;</td>
<td>User defined password for authentication.</td>
<td>max. character length: 100 accepted characters: a-z, A-Z, 0-9</td>
</tr>
</tbody>
</table>

**Example**

- **header:** POST http://192.168.0.50/api/V1/MANAGEMENT/NETWORK/AUTH/USER1/setPassword HTTP/1.1
- **body:** password
- **header:** 200 OK
- **body:** password

6.11.6. Enabling Authentication

INFO: Set the password before enabling the authentication, because no password is set by default. Restart of the HTTP(S) services is required to apply the authentication settings.

Request and Response

**#status**

- **header:** POST http://<ip>/api/V1/MANAGEMENT/NETWORK/SERVICES/<port>/AuthenticationEnabled HTTP/1.1
- **body:** <status>
- **header:** 200 OK
- **body:** <status>

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;port&gt;</td>
<td>Port type</td>
<td>HTTP HTTPS</td>
</tr>
<tr>
<td>&lt;status&gt;</td>
<td>Authentication enabled</td>
<td>true false</td>
</tr>
</tbody>
</table>
6.12. Serial Port Configuration

INFO: Port numbering can be found in the Port Numbering section.

6.12.1. BAUD Rate Setting

Request and Response

<table>
<thead>
<tr>
<th>#rs-232</th>
<th>#rs232</th>
</tr>
</thead>
<tbody>
<tr>
<td>➔ header: POST http://&lt;ip&gt;/api/V1/MEDIA/SERIAL/&lt;serial_port&gt;/Baudrate HTTP/1.1</td>
<td></td>
</tr>
<tr>
<td>➔ body: &lt;baudrate&gt;</td>
<td></td>
</tr>
<tr>
<td>➔ header: 200 OK</td>
<td></td>
</tr>
<tr>
<td>➔ body: &lt;baudrate&gt;</td>
<td></td>
</tr>
</tbody>
</table>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;baudrate&gt;</td>
<td>Baud rate value</td>
<td>9600, 19200, 38400, 57600, 115200</td>
</tr>
</tbody>
</table>

Example

| ➔ header: POST http://192.168.0.50/api/V1/MEDIA/SERIAL/P1/Baudrate HTTP/1.1 |
| ➔ body: 19200 |
| ➔ header: 200 OK |
| ➔ body: 19200 |

6.12.2. Stop Bits Setting

Request and Response

<table>
<thead>
<tr>
<th>#rs232</th>
<th>#rs-232</th>
<th>#serial</th>
</tr>
</thead>
<tbody>
<tr>
<td>➔ header: POST http://&lt;ip&gt;/api/V1/MEDIA/SERIAL/&lt;serial_port&gt;/StopBits HTTP/1.1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>➔ body: &lt;stopbits&gt;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>➔ header: 200 OK</td>
<td></td>
<td></td>
</tr>
<tr>
<td>➔ body: &lt;stopbits&gt;</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;stopbits&gt;</td>
<td>Stop bit value</td>
<td>1</td>
</tr>
</tbody>
</table>

Example

| ➔ header: POST http://192.168.0.50/api/V1/MEDIA/SERIAL/P1/StopBits HTTP/1.1 |
| ➔ body: 1 |
| ➔ header: 200 OK |
| ➔ body: 1 |

6.12.3. Querying Data Bits

Request and Response

| ➔ header: GET http://<ip>/api/V1/MEDIA/SERIAL/<serial_port>/DataBits HTTP/1.1 |
| ➔ header: 200 OK |
| ➔ body: <databits> |

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;databits&gt;</td>
<td>DataBits value</td>
<td>8, 9</td>
</tr>
</tbody>
</table>

Example

| ➔ header: GET http://192.168.0.50/api/V1/MEDIA/SERIAL/P1/DataBits HTTP/1.1 |
| ➔ header: 200 OK |
| ➔ body: 8 |

6.12.4. Parity Setting

Request and Response

| ➔ header: POST http://<ip>/api/V1/MEDIA/SERIAL/<serial_port>/Parity HTTP/1.1 |
| ➔ body: <parity> |
| ➔ header: 200 OK |
| ➔ body: <parity> |

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;parity&gt;</td>
<td>Parity value</td>
<td>None, Odd, Even</td>
</tr>
</tbody>
</table>

Example

| ➔ header: POST http://192.168.0.50/api/V1/MEDIA/SERIAL/P1/Parity HTTP/1.1 |
| ➔ body: None |
| ➔ header: 200 OK |
| ➔ body: None |
6.12.5. Querying the Serial over IP Port Number

Request and Response

- header: GET http://<ip>/api/V1/MEDIA/SERIAL/<serial_port>/SERIALOVERIP/Port HTTP/1.1
- header: 200 OK
- body: <port_nr>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;port_nr&gt;</td>
<td>Serial over IP port number</td>
<td>8001</td>
</tr>
<tr>
<td></td>
<td></td>
<td>8002</td>
</tr>
</tbody>
</table>

Example

- header: GET http://192.168.0.50/api/V1/MEDIA/SERIAL/P1/SERIALOVERIP/Port HTTP/1.1
- header: 200 OK
- body: 8001

6.12.6. Enabling the Serial over IP Port

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/SERIAL/<serial_port>/SERIALOVERIP/Enabled HTTP/1.1
- body: <state>
- header: 200 OK
- body: <state>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;message&gt;</td>
<td>Serial message</td>
<td>Any format is acceptable (text, binary, hexadecimal etc.), maximum message size is 100K. Escaping is unnecessary.</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/SERIAL/P1/send
- body: PWR0
- header: 200 OK

The 'PWR0' message is sent out via the P1 serial port.

INFO: The device can receive a serial message by a special way. When a message is sent from the device, the response from the connected device is accepted within 100 ms. The communication is closed after that time interval.

6.13. Serial Port Messaging

ATTENTION! Serial message sending is implemented only via Lightware REST API. This function is not available with LW3 protocol command.

Request and Response

- header: POST http://<ip>/api/V1/MEDIA/SERIAL/<serial_port>/send HTTP/1.1
- body: <message>
- header: 200 OK

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;state&gt;</td>
<td>Serial message</td>
<td>Any format is acceptable (text, binary, hexadecimal etc.), maximum message size is 100K. Escaping is unnecessary.</td>
</tr>
</tbody>
</table>

Example

- header: POST http://192.168.0.50/api/V1/MEDIA/SERIAL/P1/send
- body: PWR0
- header: 200 OK

The 'PWR0' message is sent out via the P1 serial port.

INFO: The device can receive a serial message by a special way. When a message is sent from the device, the response from the connected device is accepted within 100 ms. The communication is closed after that time interval.
6.14. GPIO Port Configuration

6.14.1. Setting the Direction of a GPIO Pin

**Request and Response**

- **header**: POST http://<ip>/api/V1/MEDIA/GPIO/<pin>/Direction HTTP/1.1
- **body**: <dir>
- **header**: 200 OK
- **body**: <dir>

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;pin&gt;</td>
<td>GPIO pin number.</td>
<td>P1-P6</td>
<td></td>
</tr>
<tr>
<td>&lt;dir&gt;</td>
<td>The direction of the GPIO pin.</td>
<td>Input</td>
<td>input</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Output</td>
<td>output</td>
</tr>
</tbody>
</table>

**Example**

- **header**: POST http://192.168.0.50/api/V1/MEDIA/GPIO/P1/Direction HTTP/1.1
- **body**: Input
- **header**: 200 OK
- **body**: Input

6.14.2. Setting the Output Level of a GPIO Pin

**Request and Response**

- **header**: POST http://<ip>/api/V1/MEDIA/GPIO/<pin>/Output HTTP/1.1
- **body**: <state>
- **header**: 200 OK
- **body**: Input

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;pin&gt;</td>
<td>GPIO pin number.</td>
<td>P1-P6</td>
<td></td>
</tr>
<tr>
<td>&lt;value&gt;</td>
<td>The output value of the GPIO pin.</td>
<td>High</td>
<td>high level</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Low</td>
<td>low level</td>
</tr>
</tbody>
</table>

**Example**

- **header**: POST http://192.168.0.50/api/V1/MEDIA/GPIO/P1/Output HTTP/1.1
- **body**: High
- **header**: 200 OK
- **body**: High

6.14.3. Setting the Output Level for a Specified Time

**Request and Response**

- **header**: POST http://<ip>/api/V1/MEDIA/GPIO/<pin>/interval HTTP/1.1
- **body**: <state>;<time>
- **header**: 200 OK
- **body**: OK

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;pin&gt;</td>
<td>GPIO pin number.</td>
<td>P1-P6</td>
<td></td>
</tr>
<tr>
<td>&lt;value&gt;</td>
<td>The output value of the GPIO pin.</td>
<td>High</td>
<td>high level</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Low</td>
<td>low level</td>
</tr>
<tr>
<td>&lt;time&gt;</td>
<td>Duration of the desired value in seconds.</td>
<td>1-120</td>
<td>seconds</td>
</tr>
</tbody>
</table>

**Example**

- **header**: POST http://192.168.0.50/api/V1/MEDIA/GPIO/P1/interval HTTP/1.1
- **body**: Low;1
- **header**: 200 OK
- **body**: OK

6.14.4. Toggling the Level of a GPIO Pin

The output level can be changed from low to high and from high to low by the command below.

**Request and Response**

- **header**: POST http://<ip>/api/V1/MEDIA/GPIO/<pin>/toggle HTTP/1.1
- **body**: 
- **header**: 200 OK
- **body**: OK

**Example**

- **header**: POST http://192.168.0.50/api/V1/MEDIA/GPIO/P1/toggle HTTP/1.1
- **body**: 200 OK
- **body**: OK
6.15. OCS Port Configuration

6.15.1. Querying the Input Level of an OCS Pin

Request and Response

```
GET http://<ip>/api/V1/MEDIA/OCS/P1/InputLevel HTTP/1.1
```

```
HTTP/1.1 200 OK
```

```
<value>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;value&gt;</td>
<td>The input value of the OCS pin.</td>
<td>High</td>
<td>high level</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Low</td>
<td>low level</td>
</tr>
</tbody>
</table>

Example

```
GET http://192.168.0.50/api/V1/MEDIA/OCS/P1/InputLevel HTTP/1.1
HTTP/1.1 200 OK
<value>
```

6.15.2. Setting the Sensor Type

Request and Response

```
POST http://<ip>/api/V1/MEDIA/OCS/P1/SensorType HTTP/1.1
```

```
HTTP/1.1 200 OK
```

```
<sensor_type>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;sensor_type&gt;</td>
<td>It defines whether the low or high input level means the occupancy.</td>
<td>Active low</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Active high</td>
</tr>
</tbody>
</table>

Example

```
POST http://192.168.0.50/api/V1/MEDIA/OCS/P1/SensorType HTTP/1.1
HTTP/1.1 200 OK
<sensor_type>
```

6.15.3. Querying the Reported OCS State

Request and Response

```
GET http://<ip>/api/V1/MEDIA/OCS/P1/State HTTP/1.1
```

```
HTTP/1.1 200 OK
```

```
<status>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;status&gt;</td>
<td>It reports the occupancy state of the room depending on the sensor type.</td>
<td>Free</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Occupied</td>
</tr>
</tbody>
</table>

Example

```
GET http://192.168.0.50/api/V1/MEDIA/OCS/P1/State HTTP/1.1
HTTP/1.1 200 OK
<status>
```

```
GET http://192.168.0.50/api/V1/MEDIA/OCS/P1/State HTTP/1.1
HTTP/1.1 200 OK
Free
```
6.16. Lightware REST API Quick Summary

System Commands

- **Setting the Device Label**
  - header: POST http://<ip>/api/V1/ MANAGEMENT/LABEL/DeviceLabel HTTP/1.1
  - body: <custom_name>

- **Resetting the Device**
  - POST http://<ip>/api/V1/SYS/restart HTTP/1.1

- **Restoring the Factory Default Settings**
  - header: POST http://<ip>/api/V1/SYS/factoryDefaults HTTP/1.1

- **Querying the Firmware Package Version**
  - GET http://<ip>/api/V1/MANAGEMENT/UID/PACKAGE/Version HTTP/1.1

- **Control Lock**
  - header: POST http://<ip>/api/V1/MANAGEMENT/UI/ControlLock HTTP/1.1
  - body: <lock_status>

- **Setting the Current Time**
  - header: POST http://<ip>/api/V1/MANAGEMENT/DATETIME/setTime HTTP/1.1
  - body: <current_time>

- **Identifying the Device**
  - header: POST http://<ip>/api/V1/MANAGEMENT/UI/identifyMe HTTP/1.1

- **Toggling the Dark Mode Setting**
  - header: POST http://<ip>/api/V1/MANAGEMENT/UI/DARKMODE/Enable HTTP/1.1
  - body: <mode_state>

- **Setting the Delay of the Dark Mode**
  - header: POST http://<ip>/api/V1/MANAGEMENT/UI/DARKMODE/Delay HTTP/1.1
  - body: <delay_time>

Video Port Settings - General

- **Switching Video Input**
  - header: POST http://<ip>/api/V1/MEDIA/VIDEO/XP/switch HTTP/1.1
  - body: <in>:<out>

- **Switching an Input to All Outputs**
  - header: POST http://<ip>/api/V1/MEDIA/VIDEO/XP/switchAll HTTP/1.1
  - body: <in>

- **Locking the Video Port**
  - header: POST http://<ip>/api/V1/MEDIA/VIDEO/XP/<port>/Lock HTTP/1.1
  - body: <locked_state>

- **Muting the Video Port**
  - header: POST http://<ip>/api/V1/MEDIA/VIDEO/XP/<port>/Mute HTTP/1.1
  - body: <muted_state>

- **Setting the Autoselect Policy**
  - header: POST http://<ip>/api/V1/MEDIA/VIDEO/AUTOSELECT/<out>/Policy HTTP/1.1
  - body: <autoselect_mode>

- **Changing the Autoselect-Included Input Ports**
  - header: POST http://<ip>/api/V1/MEDIA/VIDEO/AUTOSELECT/<out>/Included HTTP/1.1
  - body: <state>

- **Changing the Input Port Priority**
  - header: POST http://<ip>/api/V1/MEDIA/VIDEO/AUTOSELECT/<out>/Priority HTTP/1.1
  - body: <prio_num>

- **Querying the Connected Source**
  - GET http://<ip>/api/V1/MEDIA/VIDEO/XP/<out>/ConnectedSource HTTP/1.1

- **Querying the Connected Destinations**
  - GET http://<ip>/api/V1/MEDIA/VIDEO/XP/<in>/ConnectedDestinations HTTP/1.1

- **Querying the Input Switching Capability**
  - GET http://<ip>/api/V1/MEDIA/VIDEO/XP/<in>/SWITCHABLE HTTP/1.1

- **Querying the Video Signal Presence**
  - GET http://<ip>/api/V1/MEDIA/VIDEO/<in>/SignalPresent HTTP/1.1

- **HDCP Setting (Input Port)**
  - POST http://<ip>/api/V1/MEDIA/VIDEO/<in>/HDCP/AllowedHdcpVersion HTTP/1.1
  - body: <allowed_hdcp>

- **HdcpMode**
  - POST http://<ip>/api/V1/MEDIA/VIDEO/<in>/HdcpMode HTTP/1.1
  - body: <hdcp_mode>

- **Querying Embedded Audio Presence**
  - GET http://<ip>/api/V1/MEDIA/VIDEO/<out>/EmbeddedAudioPresent HTTP/1.1

- **Muting Embedded Audio**
  - POST http://<ip>/api/V1/MEDIA/VIDEO/<out>/EmbeddedAudioMute HTTP/1.1
  - body: <muted_state>
### Setting Output Signal Type

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/VIDEO/&lt;out&gt;/OutputSignalType HTTP/1.1</code></td>
<td><code>&lt;signal_type&gt;</code></td>
</tr>
</tbody>
</table>

### Turning on Output 5V

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/VIDEO/&lt;out&gt;/Output5VMode HTTP/1.1</code></td>
<td><code>&lt;5V_pwr&gt;</code></td>
</tr>
</tbody>
</table>

### CEC Command Sending

#### Simple CEC Code Sending

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/VIDEO/&lt;port&gt;/CEC/send</code></td>
<td><code>&lt;command&gt;</code></td>
</tr>
</tbody>
</table>

#### Remote Control Code Sending

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/VIDEO/&lt;port&gt;/CEC/sendUserControlClick</code></td>
<td><code>&lt;command&gt;</code></td>
</tr>
</tbody>
</table>

### Audio Port Settings

#### Switching Audio Input

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/XP/switch HTTP/1.1</code></td>
<td><code>&lt;audio_in&gt;:O3</code></td>
</tr>
</tbody>
</table>

#### Querying the Connected Source

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>GET http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/XP/O3/ConnectedSource HTTP/1.1</code></td>
<td></td>
</tr>
</tbody>
</table>

#### Querying the Connected Destinations

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>GET http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/&lt;audio_in&gt;/ConnectedDestinations HTTP/1.1</code></td>
<td></td>
</tr>
</tbody>
</table>

#### Setting Autoselect Operation Mode

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/AUTOSELECT/O4/Policy HTTP/1.1</code></td>
<td><code>&lt;op_mode&gt;</code></td>
</tr>
</tbody>
</table>

#### Setting the Followed Video Port to Autoselect

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUTOSELECT/O3/VideoFollowPort HTTP/1.1</code></td>
<td><code>&lt;out&gt;</code></td>
</tr>
</tbody>
</table>

#### Locking the Audio Port

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/XP/&lt;audio_port&gt;/Lock HTTP/1.1</code></td>
<td><code>&lt;locked_state&gt;</code></td>
</tr>
</tbody>
</table>

#### Muting the Audio Port 1

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/XP/&lt;audio_port&gt;/Mute HTTP/1.1</code></td>
<td><code>&lt;muted_state&gt;</code></td>
</tr>
</tbody>
</table>

### Muting the Audio Port 2

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/O4/Mute HTTP/1.1</code></td>
<td><code>&lt;muted_state&gt;</code></td>
</tr>
</tbody>
</table>

### Querying the Audio Signal Presence

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>GET http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/&lt;audio_port&gt;/SignalPresent HTTP/1.1</code></td>
<td></td>
</tr>
</tbody>
</table>

### Analog Audio Output Volume (dB) Setting

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/O4/VolumedB HTTP/1.1</code></td>
<td><code>&lt;level&gt;</code></td>
</tr>
</tbody>
</table>

### Analog Audio Output Volume Percent Setting

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/O4/VolumePercent HTTP/1.1</code></td>
<td><code>&lt;percent&gt;</code></td>
</tr>
</tbody>
</table>

### Setting the Balance

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/O4/Balance HTTP/1.1</code></td>
<td><code>&lt;level&gt;</code></td>
</tr>
</tbody>
</table>

### Analog Audio Output Level Setting by Steps (dB)

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/O4/stepVolumedB HTTP/1.1</code></td>
<td><code>&lt;step&gt;</code></td>
</tr>
</tbody>
</table>

### Analog Audio Output Level Setting by Steps in Percent

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/O4/stepVolumePercent HTTP/1.1</code></td>
<td><code>&lt;step&gt;</code></td>
</tr>
</tbody>
</table>

### Analog Audio Output Balance Setting by Steps

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/MEDIA/AUDIO/O4/stepBalance HTTP/1.1</code></td>
<td><code>&lt;step&gt;</code></td>
</tr>
</tbody>
</table>

### EDID Management

#### Querying the Emulated EDIDs

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>GET http://&lt;ip&gt;/api/V1/EDID/EdidStatus HTTP/1.1</code></td>
<td></td>
</tr>
</tbody>
</table>

#### Querying the Validity of a Dynamic EDID

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>GET http://&lt;ip&gt;/api/V1/EDID/D/D1/Validity HTTP/1.1</code></td>
<td></td>
</tr>
</tbody>
</table>

#### Query the Preferred Resolution of a User EDID

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>GET http://&lt;ip&gt;/api/V1/EDID/U/&lt;user_edid&gt;/PreferredResolution HTTP/1.1</code></td>
<td></td>
</tr>
</tbody>
</table>

#### Emulating an EDID to an Input Port

<table>
<thead>
<tr>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>POST http://&lt;ip&gt;/api/V1/EDID/switch HTTP/1.1</code></td>
<td><code>&lt;source&gt;&lt;destination&gt;</code></td>
</tr>
</tbody>
</table>
## Emulating an EDID to All Input Ports

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/EDID/switchAll</td>
<td>HTTP/1.1</td>
<td>&lt;source&gt;</td>
</tr>
</tbody>
</table>

## Copying an EDID to User Memory

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/EDID/copy</td>
<td>HTTP/1.1</td>
<td>&lt;source&gt; -&gt; &lt;destination&gt;</td>
</tr>
</tbody>
</table>

## Deleting an EDID from User Memory

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/EDID/delete</td>
<td>HTTP/1.1</td>
<td>&lt;user_edid&gt;</td>
</tr>
</tbody>
</table>

## Resetting the Emulated EDIDs

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/EDID/reset</td>
<td>HTTP/1.1</td>
<td></td>
</tr>
</tbody>
</table>

## Ethernet Port Configuration

### Setting the DHCP State

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MANAGEMENT/NETWORK/DhcpEnabled</td>
<td>HTTP/1.1</td>
<td>&lt;dhcp_status&gt;</td>
</tr>
</tbody>
</table>

### Changing the IP Address (Static)

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MANAGEMENT/NETWORK/StaticIpAddress</td>
<td>HTTP/1.1</td>
<td>&lt;IP_address&gt;</td>
</tr>
</tbody>
</table>

### Changing the Subnet Mask (Static)

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MANAGEMENT/NETWORK/StaticNetworkMask</td>
<td>HTTP/1.1</td>
<td>&lt;netmask&gt;</td>
</tr>
</tbody>
</table>

### Changing the Gateway Address (Static)

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MANAGEMENT/NETWORK/StaticGatewayAddress</td>
<td>HTTP/1.1</td>
<td>&lt;gw_address&gt;</td>
</tr>
</tbody>
</table>

### Applying Network Settings

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MANAGEMENT/NETWORK/applySettings</td>
<td>HTTP/1.1</td>
<td></td>
</tr>
</tbody>
</table>

### Setting the Hostname

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MANAGEMENT/NETWORK/HostName</td>
<td>HTTP/1.1</td>
<td>&lt;unique_name&gt;</td>
</tr>
</tbody>
</table>

## Network Security

### Enabling/Disabling Ethernet Port

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MEDIA/ETHERNET/&lt;ethernet_port&gt;/Enabled</td>
<td>HTTP/1.1</td>
<td>&lt;status&gt;</td>
</tr>
</tbody>
</table>

### Querying Network Service Port Number

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>/api/V1/MANAGEMENT/NETWORK/SERVICES/&lt;port&gt;/Port</td>
<td>HTTP/1.1</td>
<td></td>
</tr>
</tbody>
</table>

### Enabling/Disabling Network Service Port

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MANAGEMENT/NETWORK/SERVICES/&lt;port&gt;/Enabled</td>
<td>HTTP/1.1</td>
<td>&lt;status&gt;</td>
</tr>
</tbody>
</table>

### Querying the Username for Authentication

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET</td>
<td>/api/V1/MANAGEMENT/NETWORK/AUTH/USER1/Name</td>
<td>HTTP/1.1</td>
<td></td>
</tr>
</tbody>
</table>

### Setting Password for Authentication

<table>
<thead>
<tr>
<th>Method</th>
<th>Endpoint</th>
<th>Header</th>
<th>Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>POST</td>
<td>/api/V1/MANAGEMENT/NETWORK/AUTH/USER1/setPassword</td>
<td>HTTP/1.1</td>

Serial Port Messaging

Sending a Message via RS-232

- **header:** POST http://<ip>/api/V1/MEDIA/SERIAL/<serial_port>/send HTTP/1.1
- **body:** <message>

GPIO Port Configuration

Setting the Direction of a GPIO Pin

- **header:** POST http://<ip>/api/V1/MEDIA/GPIO/<pin>/Direction HTTP/1.1
- **body:** <dir>

Setting the Output Level of a GPIO Pin

- **header:** POST http://<ip>/api/V1/MEDIA/GPIO/<pin>/Output HTTP/1.1
- **body:** <state>

Setting the Output Level for a Specified Time

- **header:** POST http://<ip>/api/V1/MEDIA/GPIO/<pin>/interval HTTP/1.1
- **body:** <value>;<time>

Toggling the Level of a GPIO Pin

- **header:** POST http://<ip>/api/V1/MEDIA/GPIO/<pin>/toggle HTTP/1.1

OCS Port Configuration

Querying the Input Level of an OCS Pin

- **header:** GET http://<ip>/api/V1/MEDIA/OCS/P1/InputLevel HTTP/1.1

Setting the Sensor Type

- **header:** POST http://<ip>/api/V1/MEDIA/OCS/P1/SensorType HTTP/1.1
- **body:** <sensor_type>

Querying the Reported OCS State

- **header:** GET http://<ip>/api/V1/MEDIA/OCS/P1/State HTTP/1.1
LW3 Programmers’ Reference

The device can be controlled through Lightware 3 (LW3) protocol commands to ensure the compatibility with other Lightware products. The supported LW3 commands are described in this chapter.

- Overview
- Instructions for the Terminal Application Usage
- Websocket (WS) or Secured Websocket (WSS) Usage
- Protocol Rules
- System Commands

- OCS Port Configuration
- LW3 Commands - Quick Summary
7.1. Overview

The Lightware Protocol #3 (LW3) is implemented in almost all new Lightware devices (matrix switchers, signal extenders and distribution amplifiers) since 2012. The protocol is ASCII-based and all commands are terminated with a carriage return (Cr, ‘r’) and line feed (Lf, ‘n’) pair. It is organized as a tree structure that provides outstanding flexibility and user-friendly handling with ‘nodes’, ‘properties’ and ‘methods’. The Advanced View of the Lightware Device Controller software is the perfect tool for browsing and learning how the LW3 protocol can be used in practice.

7.2. Instructions for the Terminal Application Usage

Terminal Application

The LW3 protocol commands can be applied to the switcher using a terminal application. You need to install one of them to your control device, for example Putty or CLICLI.

Establishing Connection

Follow the steps for establishing connection to the switcher:

Step 1. Connect the switcher to a LAN over Ethernet.
Step 2. Open the terminal application (e.g. Putty).
Step 3. Add the IP address of the device (default: DHCP) and the port number (6107).
Step 4. Select the Raw connection type, and open the connection.

Once the terminal window is opened, you can enter the LW3 protocol commands, which are listed in the following sections.

LW3 protocol command communication in a terminal window

7.3. Websocket (WS) or Secured Websocket (WSS) Usage

MMX2 series switcher provides WS/WSS services on its 80 (for WS) and 443 (for WSS) ports to control the device with LW3 protocol commands. For more details about the websocket, see the WebSocket Service (WS, WSS) section.

The LW3 node tree is available after opening a session with the device on the following path:

- ws://ip/lw3
- wss://ip/lw3

WebSocket Client Application

Establishing the Connection

Follow the steps for establishing connection to the switcher:

Step 1. Connect the receiver to a LAN over Ethernet.
Step 2. Open the websocket client (e.g. Simple websocket Client).
Step 3. Add the IP address of the device (default: DHCP): ws://ip/lw3 or wss://ip/lw3
Step 4. Press the open/connect button.
Step 5. Once connected, enter a message and press the Send button.
Step 6. Press the Close/Disconnect button to end the session.
7.4. Protocol Rules

7.4.1. LW3 Tree Structure and Command Structure (examples)

- All names and parameters are case-sensitive.
- The nodes are separated by a slash (/) character.
- The node name can contain the elements of the English alphabet and numbers.
- Use the TCP port no. 6107 when using LW3 protocol over Ethernet.
- The 80 port can be used for WS (instead of HTTP)
- Use the 443 port can be used for WSS (instead of HTTPS)
- When a command is issued by the device, the received response cannot be processed by the CPU.
- The node paths describe the exact location of the node, listing each parent node up to the root.
- The length of a line (command/response, command type / prefix, path, method/property and parameters together) can be max. 800 bytes.
- The command lines have to be closed by Carriage Return and Line Feed (CrLf)
- It can manage 18 connected clients in total simultaneously for WS (80), WSS (443) and LW3 (6107) ports.

7.4.3. Legend for the Control Commands

Command and Response – Example

- GET /V1/MEDIA/VIDEO/I2.SignalPresent
- pr./V1/MEDI

<table>
<thead>
<tr>
<th>Format</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;in&gt;</td>
<td>Input port number</td>
</tr>
<tr>
<td>&lt;out&gt;</td>
<td>Output port number</td>
</tr>
<tr>
<td>&lt;port&gt;</td>
<td>Input or output port number</td>
</tr>
<tr>
<td>&lt;loc&gt;</td>
<td>Location number</td>
</tr>
<tr>
<td>&lt;parameter&gt;</td>
<td>Variable defined and described in the command</td>
</tr>
<tr>
<td>&lt;expression&gt;</td>
<td>Batched parameters: the underline means that more expressions or parameters can be placed by using a semicolon, e.g. I2;I4 or F2:7:E1;F47:E2</td>
</tr>
</tbody>
</table>

- Sent command
- Received response
- Space character

Further not listed <parameters> are defined at each command.
7.4.4. Command Types

GET command

The GET command can be used to get the child nodes, properties and methods of a specific node. It can also be used to get the value of a property. Use the dot character (.) when addressing a property:

- GET /SerialNumber
- pr /SerialNumber=87654321

GETALL command

The GETALL command can be used to get all child nodes, properties and methods of a node with one command.

- GETALL /V1/MEDIA/ETHERNET
- n /V1/MEDIA/ETHERNET/P1
- n /V1/MEDIA/ETHERNET/P2
- n /V1/MEDIA/ETHERNET/P3
- n /V1/MEDIA/ETHERNET/P4
- n /V1/MEDIA/ETHERNET/P5

SET command

The SET command can be used to modify the value of a property. Use the dot character (.) when addressing the property:

- SET /V1/MEDIA/VIDEO/I2/HDCP .AllowedHdcpVersion=Off
- pw /V1/MEDIA/VIDEO/I2/HDCP .AllowedHdcpVersion=Off

CALL command

A method can be invoked by the CALL command. Use the colon character (:) when addressing the method:

- CALL /V1/EDID:switchAll(F49)
- mO /V1/EDID:switchAll

MAN command

The manual is a human readable text that describes the syntax and provides a hint on how to use the primitives. For every node, property and method in the tree there is a manual, type the MAN command to get the manual:

- MAN /V1/MEDIA/VIDEO/O1.Output5VMode
- pm /V1/MEDIA/VIDEO/O1.Output5VMode ["On" | "Auto" | "Off"] Enables/disables power 5V output

7.4.5. Prefix Summary

**DEFINITION:** The prefix is a 2-character-long code that describes the type of the response.

The following prefixes are defined in the LW3 protocol:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>n-</td>
<td>a node</td>
</tr>
<tr>
<td>nE</td>
<td>an error for a node</td>
</tr>
<tr>
<td>nm</td>
<td>a manual for a node</td>
</tr>
<tr>
<td>pr</td>
<td>a read-only property</td>
</tr>
<tr>
<td>pw</td>
<td>read-write property</td>
</tr>
<tr>
<td>pE</td>
<td>an error for the property</td>
</tr>
</tbody>
</table>

7.4.6. Error Messages

There are several error messages defined in the LW3 protocol, all of them have a unique error number.

- CALL /MEDIA/VIDEO/XP:lock(IA)
- mE /MEDIA/VIDEO/XP:lock %E002:Not exist

7.4.7. Escaping

**DEFINITION:** An escape sequence is a sequence of characters that does not represent itself when used inside a character or string literal, but is translated into another character or a sequence of characters.

Property values and method parameters can contain characters that are used as control characters in the protocol. They must be escaped. The escape character is the backslash (\) and escaping means injecting a backslash before the character that should be escaped (like in C language).

Control characters are the following: \() # % ( ) \r \n \t
7.4.8. Signature

**DEFINITION:** The signature is a four-digit-long hexadecimal value that can be optionally placed before every command to keep a command and the corresponding responses together as a group.

Each line is terminated with Carriage Return (Cr, ‘\r’) and Line Feed (Lf, ‘\n’) characters. In several cases the number of the lines in the response cannot be determined in advance, e.g. the client intends to receive for the whole response and also wants to be sure that the received lines belong together and to the same command. In these cases, a special feature, the ‘signature’ can be used. The response to that particular command will also be preceded by the signature, and the corresponding lines will be between brackets:

```
1700#GE T /V1/EDID.*
æ
pr /V1/EDID.EdidStatus=F49:E1,F49:E2,F49:E3,F49:E4
m- /V1/EDID:copy
m- /V1/EDID:delete
m- /V1/EDID:reset
m- /V1/EDID:switch
m- /V1/EDID:switchAll
æ
```

INFO: The lines of the signature are also Cr and Lf terminated.

7.4.9. Subscription

**DEFINITION:** Subscription to a node means that the user will get a notification if a property of the node changes.

A user can subscribe to any node. These notifications are asynchronous messages and are useful to keep the client application up to date, without having to periodically poll the node to detect a changed property. When the user does not want to be informed about the changes anymore, he can simply unsubscribe from the node.

**ATTENTION!** The subscriptions are handled separately for connections. Hence, if the connection is terminated, all registered subscriptions are deleted. After reopening a connection all subscribe commands have to be sent in order to get the notifications of the changes on that connection.

**Subscribe to a Node**
- OPEN /V1/MEDIA/VIDEO
- o-/V1/MEDIA/VIDEO

**Get the Active Subscriptions**
- OPEN /V1/MEDIA/VIDEO
- o-/V1/MEDIA/VIDEO

**Subscribe to Multiple Nodes**
- OPEN /V1/MEDIA/VIDEO/*
- o-/V1/MEDIA/VIDEO/*

**Unsubscribe from a Node**
- CLOSE /V1/MEDIA/VIDEO
- c-/V1/MEDIA/VIDEO

**Unsubscribe from Multiple Nodes**
- CLOSE /V1/MEDIA/VIDEO/*
- c-/V1/MEDIA/VIDEO/*

7.4.10. Notifications about the Changes of the Properties

When the value of a property is changed, and the user is subscribed to the node that the property belongs to, an asynchronous notification is generated. This notification is called the ‘change message’. The format of such a message is very similar to the response for the GET command:
```
CHG /EDID.EdidStatus=F48:E1
```

**A Short Example of How to Use the Subscription**

There are two independent users controlling the device through two independent connections (Connection #1 and Connection #2). The events in the rows occur after each other.

```
OPEN /V1/MEDIA/AUDIO/O3
æ
o-/V1/MEDIA/AUDIO/O3
æ
GE T /V1/MEDIA/AUDIO/O3.VolumePercent
æ
pw /V1/MEDIA/AUDIO/O3.VolumePercent=100.00
æ
GET /V1/MEDIA/AUDIO/O3.VolumePercent
æ
pw /V1/MEDIA/AUDIO/O3.VolumePercent=50.00
æ
SET /V1/MEDIA/AUDIO/O3.VolumePercent=50.00
æ
pw /V1/MEDIA/AUDIO/O3.VolumePercent=50.00
æ
CHG /V1/MEDIA/AUDIO/O3.VolumePercent=50.00
æ
```

The first user (Connection #1) set a subscription to a node. Later the other user (Connection #2) made a change, and thanks to the subscription, the first user got a notification about the change.
7.5. System Commands

7.5.1. Setting the Device Label

INFO: The device label can be changed to a custom text in the Status tab of the LDC software.

Command and Response
```
#devicelabel #label
```
- SET /V1/MANAGEMENT/LABEL.DeviceLabel=<custom_name>
- pw /V1/MANAGEMENT/LABEL.DeviceLabel=<custom_name>

The Device Label can be 49 characters long and ASCII characters are allowed. Longer names are truncated.

Example
```
SET /V1/MANAGEMENT/LABEL.DeviceLabel=MMX2_Conference_room1
pw /V1/MANAGEMENT/LABEL.DeviceLabel=MMX2_Conference_room1
```

7.5.2. Resetting the Device

The switcher can be restarted – the current connections will be terminated.

Command and Response
```
#reboot #restart
```
- CALL /V1/SYSTEM:restart()
- mO /V1/SYSTEM:restart=

Example
```
CALL /V1/SYSTEM:restart()
mO /V1/SYSTEM:restart=
```

7.5.3. Restoring the Factory Default Settings

Command and Response
```
#factory
```
- CALL /V1/SYSTEM:factoryDefaults()
- mO /V1/SYSTEM:factoryDefaults=

Example
```
CALL /V1/SYSTEM:factoryDefaults()
mO /V1/SYSTEM:factoryDefaults=
```

7.5.4. Querying the Firmware Package Version

Command and Response
```
#firmwareversion
```
- GET /V1/MANAGEMENT/UID/PACKAGE.Version
- pr /V1/MANAGEMENT/UID/PACKAGE.Version=<firmware_version>

Example
```
GET /V1/MANAGEMENT/UID/PACKAGE.Version
pr /V1/MANAGEMENT/UID/PACKAGE.Version=1.3.3b3
```

7.5.5. Control Lock

Enable/disable the operation of the front panel buttons.

Command and Response
```
#lockbutton #buttonlock
```
- SET /V1/MANAGEMENT/UI.ControlLock=<lock_status>
- pw /V1/MANAGEMENT/UI.ControlLock=<lock_status>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;lock_status&gt;</td>
<td>Front panel button locking status</td>
<td>None</td>
<td>All functions of the front panel button are enabled.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Locked</td>
<td>The front panel buttons are locked and can be unlocked by button combination (Control Lock).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Force locked</td>
<td>The front panel buttons are locked and cannot be unlocked by button combination, only in LDC (on the Status tab) or using the LW3 command.</td>
</tr>
</tbody>
</table>

Example
```
SET /V1/MANAGEMENT/UI.ControlLock=force locked
pw /V1/MANAGEMENT/UI.ControlLock=force locked
```

7.5.6. Setting the Current Time

Command and Response
```
#time
```
- CALL /V1/MANAGEMENT/DATETIME:setTime(<current_time>)
- mO /V1/MANAGEMENT/DATETIME:setTime=

Parameters

| <current_time> | The new router time in ISO 8601 date time format. |

Example
```
CALL /V1/MANAGEMENT/DATETIME:setTime(2020-11-01T04:39:54.000Z)
mO /V1/MANAGEMENT/DATETIME:setTime=
```
7.5.7. Identifying the Device

Calling the method makes the status LEDs blink for 10 seconds. The feature helps to find the device physically.

Command and Response

```
#identifyme
```

Example

```
CALL /V1/MANAGEMENT/UI:identifyMe()
mO /V1/MANAGEMENT/UI:identifyMe=
```

7.5.8. Toggling the Dark Mode Setting

The LEDs of the device can be switched off if their light could be annoying. In Dark mode, all LEDs are switched off, except for the LEDs of the RJ45 connectors.

Command and Response

```
SET /V1/MANAGEMENT/UI/DARKMODE.Enable=<mode_state>
pw /V1/MANAGEMENT/UI/DARKMODE.Enable=<mode_state>
```

Example

```
SET /V1/MANAGEMENT/UI/DARKMODE.Enable=true
pw /V1/MANAGEMENT/UI/DARKMODE.Enable=true
```

7.5.9. Setting the Delay of the Dark Mode Setting

The Dark mode can be enabled right away, or after a certain time. Thus, the mode is enabled if no buttons are pressed for a while. Pressing any button brings back the status info on the LEDs without performing the function of the button itself. The delay time can be set by this command.

Command and Response

```
SET /V1/MANAGEMENT/UI/DARKMODE.Delay=<delay_time>
pw /V1/MANAGEMENT/UI/DARKMODE.Delay=<delay_time>
```

Parameters

The `<delay_time>` parameter means seconds, and the default value is 60. If set to 0, no delay is applied, and the Dark mode can be enabled immediately by the DarkModeEnable property. This delay affects to the wakeFromDarkMode method as well.

Example

```
SET /V1/MANAGEMENT/UI/DARKMODE.Delay=10
pw /V1/MANAGEMENT/UI/DARKMODE.Delay=10
```

7.6. Video Port Settings - General

7.6.1. Switching Video Input

Command and Response

```
CALL /V1/MEDIA/VIDEO/XP:switch(<in>:<out>)
mO /V1/MEDIA/VIDEO/XP:switch=
```

Examples

```
CALL /V1/MEDIA/VIDEO/XP:switch(I5:O1)
mO /V1/MEDIA/VIDEO/XP:switch=
```

INFO: When using the '0' value as an input, the input will be disconnected and no signal will appear on the output.

7.6.2. Switching an Input to All Outputs

Command and Response

```
CALL /V1/MEDIA/VIDEO/XP:switchAll(<input>)
mO /V1/MEDIA/VIDEO/XP:switchAll=
```

Example

```
CALL /V1/MEDIA/VIDEO/XP:switchAll(I1)
mO /V1/MEDIA/VIDEO/XP:switchAll=
```

7.6.3. Locking the Video Port

Command and Response

```
SET /V1/MEDIA/VIDEO/XP/<port>.Lock=<locked_state>
pw /V1/MEDIA/VIDEO/XP/<port>.Lock=<locked_state>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;locked_state&gt;</td>
<td>Locked state</td>
<td>true</td>
<td>The port is locked</td>
</tr>
<tr>
<td></td>
<td>false</td>
<td>false</td>
<td>The port is unlocked</td>
</tr>
</tbody>
</table>

Example

```
SET /V1/MEDIA/VIDEO/XP/I2.Lock=false
pw /V1/MEDIA/VIDEO/XP/I2.Lock=false
```
7.6.4. Muting the Video Port

Command and Response

- SET /V1/MEDIA/VIDEO/XP/ <port>.Mute=<muted_state>
- pw /V1/MEDIA/VIDEO/XP/ <port>.Mute=<muted_state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;muted_state&gt;</td>
<td>Muted state</td>
<td>true</td>
<td>The port is locked.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The port is unlocked.</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/VIDEO/XP/12.Mute=false
- pw /V1/MEDIA/VIDEO/XP/12.Mute=false

7.6.5. Setting the Autoselect Policy

Command and Response

- SET /V1/MEDIA/VIDEO/AUTOSELECT/<out>.Policy=<autoselect_mode>
- pw /V1/MEDIA/VIDEO/AUTOSELECT/<out>.Policy=<autoselect_mode>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;autoselect_mode&gt;</td>
<td>The autoselect policy</td>
<td>Off</td>
<td>The autoselect function is disabled.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Last Detect</td>
<td>It is always the last attached input that is automatically switched to the output.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>First Detect</td>
<td>The first active video input is selected.</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/VIDEO/AUTOSELECT/O2.Policy=First detect
- pw /V1/MEDIA/VIDEO/AUTOSELECT/O2.Policy=First detect

7.6.6. Changing the Autoselect Included Input Ports

Command and Response

- SET /V1/MEDIA/VIDEO/AUTOSELECT/<out>/<in>.Included=<state>
- pw /V1/MEDIA/VIDEO/AUTOSELECT/<out>/<in>.Included=<state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;state&gt;</td>
<td>The chosen input is ignored in the autoselect process or not.</td>
<td>true</td>
<td>The port is included in autoselect.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The autoselect function ignores that port.</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/VIDEO/AUTOSELECT/O2/I1.Included=false
- pw /V1/MEDIA/VIDEO/AUTOSELECT/O2/I1.Included=false

7.6.7. Changing the Input Port Priority

Command and Response

- SET /V1/MEDIA/VIDEO/AUTOSELECT/<out>/<in>.Priority=<prio_num>
- pw /V1/MEDIA/VIDEO/AUTOSELECT/<out>/<in>.Priority=<prio_num>

Parameters

- The <prio> parameter means the priority number from 1 to 100, equal numbers are allowed. Inputs can have different priorities in relation to two or more outputs. Therefore, the output port number is part of the node path of input port priorities.

Example

- SET /V1/MEDIA/VIDEO/AUTOSELECT/O2/I2.Priority=51
- pw /V1/MEDIA/VIDEO/AUTOSELECT/O2/I2.Priority=51

7.6.8. Querying the Connected Source

Command and Response

- GET /V1/MEDIA/VIDEO/XP/<out>.ConnectedSource
- pw /V1/MEDIA/VIDEO/XP/<out>.ConnectedSource=<in>

Example

- GET /V1/MEDIA/VIDEO/XP/O3.ConnectedSource
- pw /V1/MEDIA/VIDEO/XP/O3.ConnectedSource=I2
7.6.9. Querying the Input Switching Capability

Video crosspoint has a limitation: I1 or I5 ports can not be selected to any output at the same time. *Busy* value of the switchable property refers to the limitation.

**Command and Response**
- GET /V1/MEDIA/VIDEO/XP/\<out>/SWITCHABLE.<in>
- pr /V1/MEDIA/VIDEO/XP/\<out>/SWITCHABLE.<in>=<switchable_state>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;switchable_state&gt;</td>
<td>The chosen input can be switched to the output or not.</td>
<td>OK</td>
<td>The connection of the chosen input and output is allowed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Busy</td>
<td>The chosen input can not be switched to the output.</td>
</tr>
</tbody>
</table>

**Example**
- GET /V1/MEDIA/VIDEO/XP/O2/SWITCHABLE.I1
- pr /V1/MEDIA/VIDEO/XP/O2/SWITCHABLE.I1=Busy

7.6.10. Querying the Connected Destinations

**Command and Response**
- GET /V1/MEDIA/VIDEO/XP/\<in>.ConnectedDestinations
- pr /V1/MEDIA/VIDEO/XP/\<in>.ConnectedDestinations=\<out>

**Example**
- GET /V1/MEDIA/VIDEO/XP/I3.ConnectedDestinations
- pr /V1/MEDIA/VIDEO/XP/I3.ConnectedDestinations=O1;O2

7.6.11. Querying the Video Signal Presence

**Command and Response**
- GET /V1/MEDIA/VIDEO/\<port>.SignalPresent
- pr /V1/MEDIA/VIDEO/\<port>.SignalPresent=<state>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;state&gt;</td>
<td>This property gives a feedback about the current signal presence of the port.</td>
<td>true</td>
<td>The video signal is present.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The video signal is not present.</td>
</tr>
</tbody>
</table>

**Example**
- GET /V1/MEDIA/VIDEO/I1.SignalPresent
- pr /V1/MEDIA/VIDEO/I1.SignalPresent=false

### 7.6.12. HDCP Setting (Input Port)

HDCP capability can be set on the input ports, thus non-encrypted content can be seen on a non-HDCP compliant display. See more information in the HDCP Management section.

**ATTENTION!** HDCP 2.2 signal handling is limited to up to two input ports at the same time.

**Command and Response**
- SET /V1/MEDIA/VIDEO/\<in>/HDCP.AllowedHdcpVersion=<allowed_hdcp>
- pw /V1/MEDIA/VIDEO/\<in>/HDCP.AllowedHdcpVersion=<allowed_hdcp>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;allowed_hdcp&gt;</td>
<td>The input port reports the HDCP capability.</td>
<td>HDCP 1.4</td>
<td>The input port reports HDCP 1.4 capability.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>HDCP 2.2</td>
<td>The input port reports HDCP 2.2 capability.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Off</td>
<td>The input port reports non-HDCP compliance.</td>
</tr>
</tbody>
</table>

**Example**
- SET /V1/MEDIA/VIDEO/I1/HDCP.AllowedHdcpVersion=HDCP 1.4
- pw /V1/MEDIA/VIDEO/I1/HDCP.AllowedHdcpVersion=HDCP 1.4

### 7.6.13. HdcpMode

HDCP capability can be set to Auto/Always on the output ports, thus non-encrypted content can be transmitted to a non-HDCP compliant display. See more information in the HDCP Management section.

**Command and Response**
- SET /V1/MEDIA/VIDEO/\<out>.HdcpMode=<hdcp_mode>
- pw /V1/MEDIA/VIDEO/\<out>.HdcpMode=<hdcp_mode>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;hdcp_mode&gt;</td>
<td>HDCP encryption setting on the output port</td>
<td>Auto</td>
<td>The encryption is enabled on the output port if the signal on the input port is encrypted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Always</td>
<td>The outgoing signal is HDCP-encrypted.</td>
</tr>
</tbody>
</table>

**Example**
- SET /V1/MEDIA/VIDEO/O1/HDCP.HdcpMode=Auto
- pw /V1/MEDIA/VIDEO/O1/HDCP.HdcpMode=Auto
7.6.14. OutputSignalType

Command and Response

Set a signal type on any output:

- SET /V1/MEDIA/VIDEO/<out>.OutputSignalType=<signal_type>
- pw /V1/MEDIA/VIDEO/<out>.OutputSignalType=<signal_type>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;signal_type&gt;</td>
<td>Signal type setting</td>
<td>Auto</td>
<td>The outgoing signal type is HDMI.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>DVI</td>
<td>The outgoing signal type is DVI.</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/VIDEO/O1.OutputSignalType=Auto
- pw /V1/MEDIA/VIDEO/O1.OutputSignalType=Auto

7.6.15. EmbeddedAudioPresent

Get the presence or absence of embedded audio on any output:

- GET /V1/MEDIA/VIDEO/<port>.EmbeddedAudioPresent
- pr /V1/MEDIA/VIDEO/<port>.EmbeddedAudioPresent=<embedded_state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;embedded_state&gt;</td>
<td>It shows if the video contains audio or not.</td>
<td>true</td>
<td>There is embedded audio in the video signal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>There is no embedded audio in the video signal.</td>
</tr>
</tbody>
</table>

Example

- GET /V1/MEDIA/VIDEO/I2.EmbeddedAudioPresent
- pr /V1/MEDIA/VIDEO/I2.EmbeddedAudioPresent=false

7.6.16. EmbeddedAudioMute

Mute or unmute the embedded audio on any output:

- SET /V1/MEDIA/VIDEO/<port>.EmbeddedAudioMute=<mute_state>
- pw /V1/MEDIA/VIDEO/<port>.EmbeddedAudioMute=<mute_state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;mute_state&gt;</td>
<td>It shows if the embedded audio is muted or not.</td>
<td>true</td>
<td>The embedded audio is muted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The embedded audio is unmuted.</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/VIDEO/O1.EmbeddedAudioMute=false
- pw /V1/MEDIA/VIDEO/O1.EmbeddedAudioMute=false

7.6.17. Output5VMode

Enable or disable 5V power on any output:

Command and Response

- SET /V1/MEDIA/VIDEO/<out>.Output5VMode=<5V_pwr>
- pw /V1/MEDIA/VIDEO/<out>.Output5VMode=<5V_pwr>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;5V_pwr&gt;</td>
<td>5V power towards the sink</td>
<td>On</td>
<td>Enable 5V power on HDMI port</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Off</td>
<td>Disable 5V power on HDMI port</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/VIDEO/O1.Output5VMode=On
- pw /V1/MEDIA/VIDEO/O1.Output5VMode=On

7.6.18. HDCP Capability (Output Port)

Query the HDCP capability of the connected sink device on each output:

Command and Response

- SET /V1/MEDIA/VIDEO/<out>/HDCP/SinkMaxHdcpVersion=<hdcp_ver>
- pw /V1/MEDIA/VIDEO/<out>/HDCP/SinkMaxHdcpVersion=<hdcp_ver>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;hdcp_ver&gt;</td>
<td>The HDCP capability is reported from the sink.</td>
<td>N/A</td>
<td>Sink is not connected or the HDCP-capability cannot be determined.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>None</td>
<td>The connected sink is non-HDCP compliant.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>HDCP 1.4</td>
<td>The connected sink supports HDCP 1.4 capability.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>HDCP 2.2</td>
<td>The connected sink supports HDCP 2.2 capability.</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/VIDEO/O1/HDCP/SinkMaxHdcpVersion=HDCP 1.4
- pw /V1/MEDIA/VIDEO/O1/HDCP/SinkMaxHdcpVersion=HDCP 1.4
7.19. HDCP Setting (Output Port)

The maximum allowed HDCP encryption can be queried at each output port. See more information in the HDCP Management section.

**ATTENTION!** HDCP 2.2 signal handling is limited when 3 outputs are available: O1 and O2 ports support up to HDCP v2.2, O3 port supports HDCP v1.4.

**Command and Response**

```bash
#hdcp
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;allowed_hdcp&gt;</td>
<td>The maximum allowed HDCP encryption on the output port</td>
<td>HDCP 1.4, HDCP 2.2</td>
<td>HDCP 1.4 is supported. HDCP 2.2 and HDC 1.4 are supported.</td>
</tr>
</tbody>
</table>

**Example**

- SET /V1/MEDIA/VIDEO/<out>/HDCP/AllowedHdcpVersion=<allowed_hdcp>
- pr /V1/MEDIA/VIDEO/<out>/HDCP/AllowedHdcpVersion=<allowed_hdcp>

7.7. Audio Port Settings

7.7.1. Switching Audio Input

**Command and Response**

```bash
CALL /V1/MEDIA/AUDIO/XP:switch(<audio_in>:O3)
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_in&gt;</td>
<td>Audio input port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
</tbody>
</table>

**Example**

- CALL /V1/MEDIA/AUDIO/XP:switch(I2:O3)
- mO /V1/MEDIA/AUDIO/XP:switch=

INFO: When using the '0' value as an input, the input will be disconnected and no signal will appear on the output.

7.7.2. Querying the Connected Source

**Command and Response**

```bash
GET /V1/MEDIA/AUDIO/XP/O3.ConnectedSource
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_in&gt;</td>
<td>Audio input port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
</tbody>
</table>

**Example**

- GET /V1/MEDIA/AUDIO/XP/O3.ConnectedSource
- pw /V1/MEDIA/AUDIO/XP/O3.ConnectedSource=I2
### 7.7.3. Querying the Connected Destinations

**Command and Response**
- GET /V1/MEDIA/AUDIO/XP/<audio_in>.ConnectedDestinations
- pr /V1/MEDIA/AUDIO/XP/<audio_in>.ConnectedDestinations=

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_in&gt;</td>
<td>Audio input port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
</tbody>
</table>

**Example**
- GET /V1/MEDIA/AUDIO/XP/I3.ConnectedDestinations
- pr /V1/MEDIA/AUDIO/XP/I3.ConnectedDestinations=

### 7.7.4. Setting Autoselect Operation Mode

**Command and Response**
- SET /V1/MEDIA/AUDIO/AUTOSELECT/O4.Policy=<op_mode>
- pw /V1/MEDIA/AUDIO/AUTOSELECT/O4.Policy=<op_mode>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;op_mode&gt;</td>
<td>Operation mode</td>
<td>Follow video</td>
<td>Follows the video crosspoint state automatically.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Off</td>
<td>Autoselect function is disabled.</td>
</tr>
</tbody>
</table>

**Example**
- SET /V1/MEDIA/AUDIO/AUTOSELECT/O4.Policy=Follow video
- pw /V1/MEDIA/AUDIO/AUTOSELECT/O4.Policy=Follow video

### 7.7.5. Setting the Followed Video Port to Autoselect

**Command and Response**
- SET /V1/MEDIA/AUDIO/AUTOSELECT/O4.VideoFollowPort=<out>
- pw /V1/MEDIA/AUDIO/AUTOSELECT/O4.VideoFollowPort=<out>

**Example**
- SET /V1/MEDIA/AUDIO/AUTOSELECT/O4.VideoFollowPort=O1
- pw /V1/MEDIA/AUDIO/AUTOSELECT/O4.VideoFollowPort=O1

### 7.7.6. Locking the Audio Port

**Command and Response**
- SET /V1/MEDIA/AUDIO/XP/<audio_port>.Lock=<locked_state>
- pw /V1/MEDIA/AUDIO/XP/<audio_port>.Lock=<locked_state>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_port&gt;</td>
<td>Audio Port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
<tr>
<td></td>
<td></td>
<td>O4</td>
<td>Audio output port number</td>
</tr>
<tr>
<td>&lt;locked_state&gt;</td>
<td>Locked state</td>
<td>true</td>
<td>The port is locked</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The port is unlocked</td>
</tr>
</tbody>
</table>

**Example**
- SET /V1/MEDIA/AUDIO/XP/I2.Lock=false
- pw /V1/MEDIA/AUDIO/XP/I2.Lock=false

### 7.7.7. Muting the Audio Port 1.

**INFO:** Suspends the connection of the chosen port (no signal is forwarded).

**Command and Response**
- SET /V1/MEDIA/AUDIO/XP/<audio_port>.Mute=<muted_state>
- pw /V1/MEDIA/AUDIO/XP/<audio_port>.Mute=<muted_state>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_port&gt;</td>
<td>Audio Port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
<tr>
<td></td>
<td></td>
<td>O4</td>
<td>Audio output port number</td>
</tr>
<tr>
<td>&lt;muted_state&gt;</td>
<td>Muted state</td>
<td>true</td>
<td>The port is muted</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The port is unmuted</td>
</tr>
</tbody>
</table>

**Example**
- SET /V1/MEDIA/AUDIO/XP/I2.Mute=false
- pw /V1/MEDIA/AUDIO/XP/I2.Mute=false

**INFO:** All inputs and analog output ports have a mute property in the audio XP (e.g. /V1/MEDIA/AUDIO/XP/I1.Mute). Outputs have a separate mute function within the port node as well:
   - /V1/MEDIA/VIDEO/XP/O1.EmbeddedAudioMute
   - /V1/MEDIA/VIDEO/XP/O2.EmbeddedAudioMute
   - /V1/MEDIA/AUDIO/O4.Mute

---

Applied firmware package: v1.4.0b4 | LDC software: v2.5.17b2
7.7.8. Muting the Audio Port 2.

INFO: The volume of the analog audio output is set to low.

Command and Response

SET/V1/MEDIA/AUDIO/O4.Mute=<muted_state>

pw /V1/MEDIA/AUDIO/O4.Mute=<muted_state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_port&gt;</td>
<td>Audio Port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
<tr>
<td></td>
<td></td>
<td>O4</td>
<td>Audio output port number</td>
</tr>
<tr>
<td>&lt;muted_state&gt;</td>
<td>Muted state</td>
<td>true</td>
<td>The port is muted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The port is unmuted.</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/AUDIO/O4.Mute=true
- pw /V1/MEDIA/AUDIO/O4.Mute=true

7.7.9. Querying the Audio Signal Presence

Command and Response

GET /V1/MEDIA/AUDIO/<audio_port>.SignalPresent

pr /V1/MEDIA/AUDIO/<audio_port>.SignalPresent=<signal_state>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_port&gt;</td>
<td>USB Port</td>
<td>I1-I4</td>
<td>Audio input port number</td>
</tr>
<tr>
<td></td>
<td></td>
<td>O4</td>
<td>Audio output port number</td>
</tr>
<tr>
<td>&lt;signal_state&gt;</td>
<td>Signal presence</td>
<td>true</td>
<td>The audio signal is present.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>No audio signal is present.</td>
</tr>
</tbody>
</table>

Example

- GET /V1/MEDIA/AUDIO/I1.SignalPresent
- pr /V1/MEDIA/AUDIO/I1.SignalPresent=false

7.7.10. Analog Audio Output Volume (dB) Setting

Command and Response

SET /V1/MEDIA/AUDIO/O4.VolumedB=<level>
pw /V1/MEDIA/AUDIO/O4.VolumedB=<level>

Parameters

The <level> parameter sets the output volume (attenuation) between -95.62 dB and 0 dB in step of -0.375 dB. The value is rounded up if necessary, to match with the step value.

Example

- SET /V1/MEDIA/AUDIO/O4.VolumedB=-15
- pw /V1/MEDIA/AUDIO/O4.VolumedB=-15.00

7.7.11. Analog Audio Output Volume Percent Setting

Command and Response

SET /V1/MEDIA/AUDIO/O4.VolumePercent=<percent>
pw /V1/MEDIA/AUDIO/O4.VolumePercent=<percent>

Parameters

The <percent> parameter sets the output volume (attenuation) between 100% and 0%, in step of 1%. The value is rounded up if necessary, to match with the step value.

Example

- SET /V1/MEDIA/AUDIO/O4.VolumePercent=50
- pw /V1/MEDIA/AUDIO/O4.VolumePercent=50.00

7.7.12. Setting the Balance

Command and Response

SET /V1/MEDIA/AUDIO/O4.Balance=<level>
pw /V1/MEDIA/AUDIO/O4.Balance=<level>

Parameters

The <level> parameter sets the balance; -100 means left balance, 100 means right balance, step is 1. Center is 0 (default).

Example

- SET /V1/MEDIA/AUDIO/O4.Balance=0
- pw /V1/MEDIA/AUDIO/O4.Balance=0
7.7.13. Analog Audio Output Level Setting by Steps (dB)

**Command and Response**

```plaintext
#analogaudio
#volume
```

**Parameters**

The volume is increased or decreased with the given `<step>` value in dB.

**Example**

```plaintext
CALL /V1/MEDIA/AUDIO/O4:stepVolumedB(-1)
```

The volume is decreased with 1 dB, the current volume is -1.95 dB, which means 77.84% in percent.

7.7.14. Analog Audio Output Level Setting by Steps in Percent

**Command and Response**

```plaintext
#analogaudio
#volume
```

**Parameters**

The volume is increased or decreased by the given `<step>` value in percent.

**Example**

```plaintext
CALL /V1/MEDIA/AUDIO/O4:stepVolumePercent(5)
```

The volume is increased with 5%, the current volume is -1.52 dB, which means 82.84% in percent.

7.7.15. Analog Audio Output Balance Setting by Steps

**Command and Response**

```plaintext
#analogaudio
#balance
```

**Parameters**

The volume is increased or decreased by the given `<step>` value.

**Example**

```plaintext
CALL /V1/MEDIA/AUDIO/O4:stepBalance(-5)
```

7.8. EDID Management

7.8.1. Querying the Emulated EDIDs

**Command and Response**

```plaintext
#edid
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;source&gt;</code></td>
<td>Source EDID memory place</td>
<td>F1-F120</td>
<td>Factory EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>U1-U14</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>D1-D2</td>
<td>Dynamic EDIDs</td>
</tr>
</tbody>
</table>

**Example**

```plaintext
GET /V1/EDID.EdidStatus
```

```
pr /V1/EDID.EdidStatus=F89:E1;D1:E2;D1:E3;D1:E4
```

Emulated EDID memory for input port is listed with the EDID number that is currently emulated on the input.

7.8.2. Querying the Validity of a Dynamic EDID

**Command and Response**

```plaintext
#edid
```

**Parameters**

If the `<validity>` parameter is `true`, the EDID is valid. If the parameter is `false`, the EDID is invalid.

**Example**

```plaintext
GET /V1/EDID/D/D1.Validity
```

```
pr /V1/EDID/D/D1.Validity=true
```

The 'Validity' property is true, valid EDID is stored in D1 memory place.

7.8.3. Querying the Preferred Resolution of a User EDID

**Command and Response**

```plaintext
#edid
```

**Example**

```plaintext
GET /V1/EDID/U/<user_edid>.PreferredResolution
```

```
pr /V1/EDID/U/<user_edid>.PreferredResolution=1920x1080p60.00Hz
```

INFO: Use the `Manufacturer` and `MonitorName` properties to query further information.
7.8.4. Emulating an EDID to an Input Port

Command and Response

- CALL /V1/EDID:switch(<source>:<destination>)
- mO /V1/EDID:switch

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;source&gt;</td>
<td>Source EDID memory place</td>
<td>F1-F120</td>
<td>Factory EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>U1-U14</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>D1-D2</td>
<td>Dynamic EDIDs</td>
</tr>
<tr>
<td>&lt;destination&gt;</td>
<td>The emulated EDID memory of the desired input port</td>
<td>U1-U14</td>
<td>User EDIDs</td>
</tr>
</tbody>
</table>

Example

- CALL /V1/EDID:switch(F49:E2)
- mO /V1/EDID:switch

7.8.5. Emulating an EDID to All Input Ports

Command and Response

- CALL /V1/EDID:switchAll(<source>)
- mO /V1/EDID:switchAll

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;source&gt;</td>
<td>Source EDID memory place</td>
<td>F1-F148</td>
<td>Factory EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>U1-U100</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>D1-D2</td>
<td>Dynamic EDIDs</td>
</tr>
</tbody>
</table>

Example

- CALL /V1/EDID:switchAll(F47)
- mO /V1/EDID:switchAll

7.8.6. Copying an EDID to User Memory

Command and Response

- CALL /V1/EDID:copy(<source>:<destination>)
- mO /V1/EDID:copy

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;source&gt;</td>
<td>Source EDID memory place</td>
<td>F1-F148</td>
<td>Factory EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>U1-U100</td>
<td>User EDIDs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>D1-D2</td>
<td>Dynamic EDIDs</td>
</tr>
<tr>
<td>&lt;destination&gt;</td>
<td>The emulated EDID memory of the desired input port</td>
<td>U1-U100</td>
<td>User EDIDs</td>
</tr>
</tbody>
</table>

Example

- CALL /V1/EDID:copy(F1:U2)
- mO /V1/EDID:copy

7.8.7. Deleting an EDID from User Memory

Command and Response

- CALL /V1/EDID:delete(<user_edid>)
- mO /V1/EDID:delete

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;user_edid&gt;</td>
<td>The emulated EDID memory of the desired input port</td>
<td>U1-U14</td>
<td>User EDIDs</td>
</tr>
</tbody>
</table>

Example

- CALL /V1/EDID:delete(U2)
- mO /V1/EDID:delete
7.8.8. Resetting the Emulated EDIDs

Command and Response
- CALL /V1/EDID:reset()
- mO /V1/EDID:reset

Parameters
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Values</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;user_edid&gt;</td>
<td>The emulated EDID memory of the desired input port.</td>
<td>U1-U14</td>
<td>User EDIDs</td>
</tr>
</tbody>
</table>

Example
- CALL /V1/EDID:reset()
- mO /V1/EDID:reset

Calling this method switches all emulated EDIDs to a factory default one. See the table in the Factory EDID List section.

7.9. Ethernet Port Configuration

7.9.1. Setting the DHCP State

**ATTENTION!** When you change a network property, the new value is stored, but the applySettings method must always be called to apply the new settings. When two or more network parameters are changed, the applySettings method is enough to be called once as a final step, it will reboot the device.

Command and Response
- SET /V1/MANAGEMENT/NETWORK.DhcpEnabled=<dhcp_status>
- pw /V1/MANAGEMENT/NETWORK.DhcpEnabled=<dhcp_status>

Parameters
- If the <dhcp_status> parameter is true, the current IP address setting is DHCP, if the parameter is false, the current IP address is static.

Example
- SET /V1/MANAGEMENT/NETWORK.DhcpEnabled=true
- pw /V1/MANAGEMENT/NETWORK.DhcpEnabled=true
- CALL /V1/MANAGEMENT/NETWORK:applySettings()
- mO /V1/MANAGEMENT/NETWORK:applySettings

INFO: The applySettings method will save and apply the new value, and will reboot the device.
INFO: The current setting can be queried by using the GET command.

7.9.2. Changing the IP Address (Static)

Command and Response
- SET /V1/MANAGEMENT/NETWORK.StaticIpAddress=<IP_address>
- pw /V1/MANAGEMENT/NETWORK.StaticIpAddress=<IP_address>

Example
- SET /V1/MANAGEMENT/NETWORK.StaticIpAddress=192.168.0.85
- pw /V1/MANAGEMENT/NETWORK.StaticIpAddress=192.168.0.85
- CALL /V1/MANAGEMENT/NETWORK:applySettings()
- mO /V1/MANAGEMENT/NETWORK:applySettings

INFO: The applySettings method will save and apply the new value, and will reboot the device.
INFO: The current setting can be queried by using the GET command.
7.9.3. Changing the Subnet Mask (Static)

Command and Response

```
#ipaddress
SET /V1/MANAGEMENT/NETWORK.StaticNetworkMask=<netmask>
pw /V1/MANAGEMENT/NETWORK.StaticNetworkMask=<netmask>
```

Example

```
SET /V1/MANAGEMENT/NETWORK.StaticNetworkMask=255.255.255.0
pw /V1/MANAGEMENT/NETWORK.StaticNetworkMask=255.255.255.0
CALL /V1/MANAGEMENT/NETWORK:applySettings()
mO /V1/MANAGEMENT/NETWORK:applySettings
```

INFO: The `applySettings` method will save and apply the new value, and will reboot the device.

INFO: The current setting can be queried by using the `GET` command.

7.9.4. Changing the Gateway Address (Static)

Command and Response

```
#ipaddress
SET /V1/MANAGEMENT/NETWORK.StaticGatewayAddress=<gw_address>
pw /V1/MANAGEMENT/NETWORK.StaticGatewayAddress=<gw_address>
```

Example

```
SET /V1/MANAGEMENT/NETWORK.StaticGatewayAddress=192.168.0.5
pw /V1/MANAGEMENT/NETWORK.StaticGatewayAddress=192.168.0.5
CALL /V1/MANAGEMENT/NETWORK:applySettings()
mO /V1/MANAGEMENT/NETWORK:applySettings
```

INFO: The `applySettings` method will save and apply the new value, and will reboot the device.

INFO: The current setting can be queried by using the `GET` command.

7.9.5. Applying Network Settings

Command and Response

```
CALL /V1/MANAGEMENT/NETWORK:applySettings()
mO /V1/MANAGEMENT/NETWORK:applySettings
```

Example

```
CALL /V1/MANAGEMENT/NETWORK:applySettings()
mO /V1/MANAGEMENT/NETWORK:applySettings
```

All network settings that were changed are applied and network interface restarts.

7.9.6. Setting the Hostname

The host name is a property that can be used instead of the IP address when connecting to the device. It is also suitable for finding the device in the Device Discovery window of the LDC, see more details in the Add New Favorite Device section. If the IP address of the device is changing, the host name can be used as a fixed property.

Restarting HTTP(S) Services is required after the hostname changed. A new certificate is generated after modifying the hostname.

Command and Response

```
SET /V1/MANAGEMENT/NETWORK.HostName=<unique_name>
pw /V1/MANAGEMENT/NETWORK.HostName=<unique_name>
```

Parameters

The `<unique_name>` can be 1-64 character(s) long, and the following are allowed for naming: the elements of the English alphabet and numbers. Hyphen (-) and dot (.) are also accepted, except as last character.

Example

```
SET /V1/MANAGEMENT/NETWORK.HostName=room-switcher
pw /V1/MANAGEMENT/NETWORK.HostName=room-switcher
```
7.10. Network Security

7.10.1. Enabling/Disabling Ethernet Port

Command and Response

- SET/V1/MEDIA/ETHERNET/<ethernet_port>.Enabled=<status>
- pw /V1/MEDIA/ETHERNET/<ethernet_port>.Enabled=<status>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;ethernet_port&gt;</td>
<td>Ethernet port number</td>
<td>P1-P5</td>
</tr>
<tr>
<td>&lt;status&gt;</td>
<td>The port is enabled.</td>
<td>true</td>
</tr>
<tr>
<td></td>
<td>The port is disabled.</td>
<td>false</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/ETHERNET/P4.Enabled=true
- pw /V1/MEDIA/ETHERNET/P4.Enabled=true

7.10.2. Querying the Service Port Number

Command and Response

- GET /V1/MANAGEMENT/NETWORK/SERVICES/<port>.Port
- pw /V1/MANAGEMENT/NETWORK/SERVICES/<port>.Port=<port_num>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;port&gt;</td>
<td>Port type</td>
<td>HTTP HTTPS LW3</td>
</tr>
<tr>
<td></td>
<td></td>
<td>UART1 UART2</td>
</tr>
<tr>
<td>&lt;port_num&gt;</td>
<td>Port number</td>
<td>80 443 6107 8001</td>
</tr>
<tr>
<td></td>
<td></td>
<td>8002</td>
</tr>
</tbody>
</table>

Example

- GET /V1/MANAGEMENT/NETWORK/SERVICES/HTTP.Port
- pr /V1/MANAGEMENT/NETWORK/SERVICES/HTTP.Port=80

7.10.3. Enabling/Disabling Service Port

Command and Response

- GET /V1/MANAGEMENT/NETWORK/SERVICES/<port>.Enabled=<status>
- pw /V1/MANAGEMENT/NETWORK/SERVICES/<port>.Enabled=<status>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;port&gt;</td>
<td>Port type</td>
<td>HTTP HTTPS</td>
</tr>
<tr>
<td>&lt;status&gt;</td>
<td>The port is enabled.</td>
<td>true</td>
</tr>
<tr>
<td></td>
<td>The port is disabled.</td>
<td>false</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MANAGEMENT/NETWORK/SERVICES/HTTP.Enabled=true
- pw /V1/MANAGEMENT/NETWORK/SERVICES/HTTP.Enabled=true

7.10.4. Querying the Username for Authentication

INFO: MMX2 series deal with one user for authentication and the username (admin) can not be changed.

Command and Response

- GET /V1/MANAGEMENT/NETWORK/AUTH/USER1.Name
- pr /V1/MANAGEMENT/NETWORK/AUTH/USER1.Name=admin

Example

- GET /V1/MANAGEMENT/NETWORK/AUTH/USER1.Name
- pr /V1/MANAGEMENT/NETWORK/AUTH/USER1.Name=admin
7.10.5. Setting a Password for Authentication

INFO: Due to security reasons, the password is not stored in any property, so it can not be queried. No password is set by default, setting a password before authorizing the authentication is necessary.

Command and Response

```plaintext
CALL /V1/MANAGEMENT/NETWORK/AUTH/USER1:setPassword(<password>)
```

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;password&gt;</td>
<td>User defined password for authentication.</td>
<td>max. character length: 100 accepted characters: a-z, A-Z, 0-9</td>
</tr>
</tbody>
</table>

Example

```plaintext
CALL /V1/MANAGEMENT/NETWORK/AUTH/USER1:setPassword(password)
```

7.10.6. Enabling Authentication

INFO: Set the password before enable the authentication, because no password is set by default.

Command and Response

```plaintext
SET /V1/MANAGEMENT/NETWORK/SERVICES/<port>.AuthenticationEnabled=<status>
pw /V1/MANAGEMENT/NETWORK/SERVICES/<port>.AuthenticationEnabled=<status>
CALL /V1/MANAGEMENT/NETWORK/SERVICES/HTTP:restart()
m0 /V1/MANAGEMENT/NETWORK/SERVICES/HTTP:restart=
```

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;port&gt;</td>
<td>Port type</td>
<td>HTTP, HTTPS</td>
</tr>
<tr>
<td>&lt;status&gt;</td>
<td>Authentication enabled</td>
<td>true, false</td>
</tr>
</tbody>
</table>

Example

```plaintext
SET /V1/MANAGEMENT/NETWORK/SERVICES/HTTP::AuthenticationEnabled=true
pw /V1/MANAGEMENT/NETWORK/SERVICES/HTTP::AuthenticationEnabled=true
CALL /V1/MANAGEMENT/NETWORK/SERVICES/HTTP:restart()
m0 /V1/MANAGEMENT/NETWORK/SERVICES/HTTP:restart=
```

INFO: Restart HTTP(S) Services is required after the authentication settings changed.
7.11. Serial Port Configuration

7.11.1. BAUD Rate Setting

Command and Response

```plaintext
#rs-232 #rs232
SET /V1/MEDIA/SERIAL/<serial_port>.Baudrate=<baudrate>
pw /V1/MEDIA/SERIAL/<serial_port>.Baudrate=<baudrate>
```

### Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;baudrate&gt;</td>
<td>Baud rate value</td>
<td>9600 19200 38400 57600 115200</td>
</tr>
</tbody>
</table>

**Example**

- SET /V1/MEDIA/SERIAL/P1.Baudrate=19200
- pw /V1/MEDIA/SERIAL/P1.Baudrate=19200

7.11.2. Stop Bits Setting

Command and Response

```plaintext
#rs-232 #rs232
SET /V1/MEDIA/SERIAL/<serial_port>.StopBits=<stopbits>
pw /V1/MEDIA/SERIAL/<serial_port>.StopBits=<stopbits>
```

### Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;stopbits&gt;</td>
<td>Stop bit value</td>
<td>1 2</td>
</tr>
</tbody>
</table>

**Example**

- SET /V1/MEDIA/SERIAL/P1.StopBits=1
- pw /V1/MEDIA/SERIAL/P1.StopBits=1

*The MMX2-2x1-HC30 model has one serial port (P1).*

7.11.3. Querying Data Bits

Command and Response

```plaintext
#rs-232 #rs232
GET /V1/MEDIA/SERIAL/<serial_port>.DataBits
pr /V1/MEDIA/SERIAL/<serial_port>.DataBits=<databits>
```

### Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;databits&gt;</td>
<td>Data Bits value</td>
<td>8 9</td>
</tr>
</tbody>
</table>

**Example**

- GET /V1/MEDIA/SERIAL/P1.DataBits
- pr /V1/MEDIA/SERIAL/P1.DataBits=8

7.11.4. Parity Setting

Command and Response

```plaintext
#rs-232 #rs232
SET /V1/MEDIA/SERIAL/<serial_port>.Parity=<parity>
pw /V1/MEDIA/SERIAL/<serial_port>.Parity=<parity>
```

### Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Parameter values</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;serial_port&gt;</td>
<td>Serial port number</td>
<td>P1-P2</td>
</tr>
<tr>
<td>&lt;parity&gt;</td>
<td>Parity value</td>
<td>None Odd Even</td>
</tr>
</tbody>
</table>

**Example**

- SET /V1/MEDIA/SERIAL/P1.Parity=None
- pw /V1/MEDIA/SERIAL/P1.Parity=None

7.12. Sending a Message via RS-232

**ATTENTION!** Serial message sending is implemented only via Lightware REST API. This function is not available with LW3 protocol command. For more details, see [Serial Port Messaging](#).
7.13. GPIO Port Configuration

7.13.1. Querying the Direction of a GPIO Pin

**Command and Response**

```
#gpio
gpio
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;dir&gt;</td>
<td>The direction of the GPIO pin.</td>
<td>Input</td>
<td>input</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Output</td>
<td>output</td>
</tr>
</tbody>
</table>

**Example**

```
GET /V1/MEDIA/GPIO/P1.Direction
pw /V1/MEDIA/GPIO/P1.Direction=Input
```

7.13.2. Setting the Direction of a GPIO Pin

**Command and Response**

```
SET /V1/MEDIA/GPIO/<pin>.Direction(<dir>)
```

**Parameters**

See the previous section.

**Example**

```
SET /V1/MEDIA/GPIO/P1.Direction=Input
```

7.13.3. Querying the Output Level of a GPIO Pin

**Command and Response**

```
GET /V1/MEDIA/GPIO/<pin>.Output
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;value&gt;</td>
<td>The output value of the GPIO pin.</td>
<td>High</td>
<td>high level</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Low</td>
<td>low level</td>
</tr>
</tbody>
</table>

**Example**

```
GET /V1/MEDIA/GPIO/P1.Output
pw /V1/MEDIA/GPIO/P1.Output=Low
```

7.13.4. Setting the Output Level of a GPIO Pin

**Command and Response**

```
SET /V1/MEDIA/GPIO/<pin>.Output(<value>)
pw /V1/MEDIA/GPIO/<pin>.Output(<value>)
```

**Parameters**

See the previous section.

**Example**

```
SET /V1/MEDIA/GPIO/P1.Output=High
pw /V1/MEDIA/GPIO/P1.Output=High
```

7.13.5. Setting the Output Level for a Specified Time

**Command and Response**

```
CALL /V1/MEDIA/GPIO/<pin>:interval(<value>;<time>)
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;value&gt;</td>
<td>The output value of the GPIO pin.</td>
<td>High</td>
<td>high level</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Low</td>
<td>low level</td>
</tr>
<tr>
<td>&lt;time&gt;</td>
<td>Duration of the desired value in seconds</td>
<td>1-120 seconds</td>
<td></td>
</tr>
</tbody>
</table>

**Example**

```
CALL /V1/MEDIA/GPIO/P1:interval(Low;1)
```

7.13.6. Toggling the Level of a GPIO Pin

The output level can be changed from high to low and from low to high by the command below.

**Command and Response**

```
CALL /V1/MEDIA/GPIO/<pin>:toggle()
```

**Example**

```
CALL /V1/MEDIA/GPIO/P1:toggle()
```
7.14. OCS Port Configuration

DIFERENCE: Occupancy sensor-related commands are available only from FW package 1.1.0b7.

7.14.1. Querying the Input Level of an OCS Pin

Command and Response

```plaintext
#ocs
c GET /V1/MEDIA/OCS/P1.InputLevel
pr /V1/MEDIA/OCS/P1.InputLevel=<value>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;value&gt;</td>
<td>The input value of the OCS pin.</td>
<td>High</td>
<td>high level</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Low</td>
<td>low level</td>
</tr>
</tbody>
</table>

Example

- GET /V1/MEDIA/OCS/P1.InputLevel
- pr /V1/MEDIA/OCS/P1.InputLevel=Low

7.14.2. Setting the Sensor Type

Command and Response

```plaintext
#set
SET /V1/MEDIA/OCS/P1.SensorType=<sensor_type>
pw /V1/MEDIA/OCS/P1.SensorType=<sensor_type>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;sensor_type&gt;</td>
<td>It defines whether the low or high input level means the occupancy.</td>
<td>Active low</td>
<td>Occupancy status is 'Occupied' when the input level is low.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Active high</td>
<td>Occupancy status is 'Occupied' when the input level is high (default value).</td>
</tr>
</tbody>
</table>

Example

- SET /V1/MEDIA/OCS/P1.SensorType=Active low
- pw /V1/MEDIA/OCS/P1.SensorType=Active low

7.14.3. Querying the Reported OCS State

Command and Response

```plaintext
GET /V1/MEDIA/OCS/P1.State
pr /V1/MEDIA/OCS/P1.State=<status>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;status&gt;</td>
<td>It reports the occupancy state of the room depending on the sensor type.</td>
<td>Free</td>
<td>When the SensorType=Active high and the InputLevel=Low or when SensorType=Active low and InputLevel=High</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Occupied</td>
<td>When the SensorType=Active high and the InputLevel=High or when SensorType=Active low and InputLevel=Low</td>
</tr>
</tbody>
</table>

Example

- GET /V1/MEDIA/OCS/P1.State
- pr /V1/MEDIA/OCS/P1.State=Free
7.15. LW3 Commands - Quick Summary

System Commands
- Setting the Device Label
  ```
  SET /V1/MANAGEMENT/LABEL.DeviceLabel=<custom_name>
  ```
- Resetting the Device
  ```
  CALL /V1/SYS:restart()
  ```
- Restoring the Factory Default Settings
  ```
  CALL /V1/SYS:factoryDefaults()
  ```
- Querying the Firmware Package Version
  ```
  GET /V1/MANAGEMENT/UID/PACKAGE.Version
  ```
- Control Lock
  ```
  SET /V1/MANAGEMENT/UI.ControlLock=<lock_status>
  ```
- Setting the Current Time
  ```
  CALL /V1/MANAGEMENT/DATETIME:setTime(<current_time>)
  ```
- Identifying the Device
  ```
  CALL /V1/MANAGEMENT/UI:identifyMe()
  ```
- Toggling the Dark Mode Setting
  ```
  SET /V1/MANAGEMENT/UI/DARKMODE.Enable=<mode_state>
  ```
- Setting the Delay of the Dark Mode Setting
  ```
  SET /V1/MANAGEMENT/UI/DARKMODE.Delay=<delay_time>
  ```

Video Port Settings - General
- Switching Video Input
  ```
  CALL /V1/MEDIA/VIDEO/XP:switch(<in>:<out>)
  ```
- Switching an Input to All Outputs
  ```
  CALL /V1/MEDIA/VIDEO/XP:switchAll(<input>)
  ```
- Locking the Video Port
  ```
  SET /V1/MEDIA/VIDEO/XP/<port>.Lock=<locked_state>
  ```
- Muting the Video Port
  ```
  SET /V1/MEDIA/VIDEO/XP/<port>.Mute=<muted_state>
  ```
- Setting the Autoselect Policy
  ```
  SET /V1/MEDIA/VIDEO/AUTOSELECT/<out>/.Policy=<autoselect_mode>
  ```
- Changing the Autoselect Included Input Ports
  ```
  SET /V1/MEDIA/VIDEO/AUTOSELECT/<out>/<in>.Included=<state>
  ```
- Changing the Input Port Priority
  ```
  SET /V1/MEDIA/VIDEO/AUTOSELECT/<out>/<in>.Priority=<prio_num>
  ```
- Querying the Connected Source
  ```
  GET /V1/MEDIA/VIDEO/XP/<out>:ConnectedSource
  ```
- Querying the Input Switching Capability
  ```
  GET /V1/MEDIA/VIDEO/XP/<out>/SWITCHABLE.<in>
  ```
- Querying the Connected Destinations
  ```
  GET /V1/MEDIA/VIDEO/XP/<in>:ConnectedDestinations
  ```
- Querying the Video Signal Presence
  ```
  GET /V1/MEDIA/VIDEO/<port>:SignalPresent
  ```
- HDCP Setting (Input Port)
  ```
  SET /V1/MEDIA/VIDEO/<in>/HDCPAllowedHdcpVersion=<allowed_hdcp>
  ```
- OutputSignalType
  ```
  SET /V1/MEDIA/VIDEO/<out>.OutputSignalType=<signal_type>
  ```
- EmbeddedAudioPresent
  ```
  GET /V1/MEDIA/VIDEO/<port>.EmbeddedAudioPresent
  ```
- EmbeddedAudioMute
  ```
  SET /V1/MEDIA/VIDEO/<port>.EmbeddedAudioMute=<mute_state>
  ```
- Output5VMode
  ```
  SET /V1/MEDIA/VIDEO/<out>.Output5VMode=<5V_pwr>
  ```
- HDCP Capability (Output Port)
  ```
  SET /V1/MEDIA/VIDEO/<out>/HDCPSinkMaxHdcpVersion=<hdcp_ver>
  ```
- HDCP Setting (Output Port)
  ```
  SET /V1/MEDIA/VIDEO/<out>/HDCPAllowedHdcpVersion=<allowed_hdcp>
Audio Port Settings

- **Switching Audio Input**
  - CALL·/V1/MEDIA/AUDIO/XP:switch(<audio_in>:03)

- **Querying the Connected Source**
  - GET·/V1/MEDIA/AUDIO/XP/03.ConnectedSource

- **Querying the Connected Destinations**
  - GET·/V1/MEDIA/AUDIO/XP/<audio_in>:ConnectedDestinations

- **Setting Autoselect Operation Mode**
  - SET·/V1/MEDIA/AUDIO/AUTOSELECT/O4.Policy=<op_mode>

- **Setting the Followed Video Port to Autoselect**
  - SET·/V1/MEDIA/AUDIO/AUTOSELECT/O4.VideoFollowPort=<out>

- **Locking the Audio Port**
  - SET·/V1/MEDIA/AUDIO/XP/<audio_port>.Lock=<locked_state>

- **Muting the Audio Port 1**
  - SET·/V1/MEDIA/AUDIO/XP/<audio_port>.Mute=<muted_state>

- **Muting the Audio Port 2**
  - SET·/V1/MEDIA/AUDIO/O4.Mute=<muted_state>

- **Querying the Audio Signal Presence**
  - GET·/V1/MEDIA/AUDIO/<audio_port>.SignalPresent

- **Analog Audio Output Volume (dB) Setting**
  - SET·/V1/MEDIA/AUDIO/O4.VolumedB=<level>

- **Analog Audio Output Volume Percent Setting**
  - SET·/V1/MEDIA/AUDIO/O4.VolumePercent=<percent>

- **Setting the Balance**
  - SET·/V1/MEDIA/AUDIO/O4.Balance=<level>

- **Analog Audio Output Level Setting by Steps (dB)**
  - CALL·/V1/MEDIA/AUDIO/O4:stepVolumedB(<step>)

- **Analog Audio Output Level Setting by Steps in Percent**
  - CALL·/V1/MEDIA/AUDIO/O4:stepVolumePercent(<step>)

- **Analog Audio Output Balance Setting by Steps**
  - CALL·/V1/MEDIA/AUDIO/O4:stepBalance(<step>)

EDID Management

- **Querying the Emulated EDIDs**
  - GET·/V1/EDID.EdidStatus

- **Querying the Validity of a Dynamic EDID**
  - GET·/V1/EDID/D/D1.Validity

- **Querying the Preferred Resolution of a User EDID**
  - GET·/V1/EDID/U/<user_edid>.PreferredResolution

- **Emulating an EDID to an Input Port**
  - CALL·/V1/EDID:switch(<source>:<destination>)

- **Emulating an EDID to All Input Ports**
  - CALL·/V1/EDID:switchAll(<source>)

- **Copying an EDID to User Memory**
  - CALL·/V1/EDID:copy(<source>:<destination>)

- **Deleting an EDID from User Memory**
  - CALL·/V1/EDID:delete(<user_edid>)

- **Resetting the Emulated EDIDs**
  - CALL·/V1/EDID:reset()

Ethernet Port Configuration

- **Setting the DHCP State**
  - SET·/V1/MANAGEMENT/NETWORK.DhcpEnabled=<dhcp_status>

- **Changing the IP Address (Static)**
  - SET·/V1/MANAGEMENT/NETWORK.StaticIpAddress=<IP_address>

- **Changing the Subnet Mask (Static)**
  - SET·/V1/MANAGEMENT/NETWORK.StaticNetworkMask=<netmask>

- **Changing the Gateway Address (Static)**
  - SET·/V1/MANAGEMENT/NETWORK.StaticGatewayAddress=<gw_address>

- **Applying Network Settings**
  - CALL·/V1/MANAGEMENT/NETWORK:applySettings()

- **Setting the Hostname**
  - SET·/V1/MANAGEMENT/NETWORK.HostName=<unique_name>
Network Security

Enabling/Disabling Ethernet Port

- SET /V1/MEDIA/ETHERNET/<ethernet_port>.Enabled=<status>

Querying the Service Port Number

- GET /V1/MANAGEMENT/NETWORK/SERVICES/<port>.Port

Enabling/Disabling Service Port

- GET /V1/MANAGEMENT/NETWORK/SERVICES/<port>.Enabled=<status>

Querying the Username for Authentication

- GET /V1/MANAGEMENT/NETWORK/AUTH/USER1.Name

Setting a Password for Authentication

- CALL /V1/MANAGEMENT/NETWORK/AUTH/USER1:setPassword(<password>)

Enabling Authentication

- SET /V1/MANAGEMENT/NETWORK/SERVICES/<port>.AuthenticationEnabled=<status>

- CALL /V1/MANAGEMENT/NETWORK/SERVICES/HTTP:restart()

Restarting Network Services

- CALL /V1/MANAGEMENT/NETWORK/SERVICES/<port>:restart()

Serial Port Configuration

BAUD Rate Setting

- SET /V1/MEDIA/SERIAL/<serial_port>.Baudrate=<baudrate>

Stop Bits Setting

- SET /V1/MEDIA/SERIAL/<serial_port>.StopBits=<stopbits>

Querying Data Bits

- GET /V1/MEDIA/SERIAL/<serial_port>.DataBits

Parity Setting

- SET /V1/MEDIA/SERIAL/<serial_port>.Parity=<parity>

GPIO Port Configuration

Querying the Direction of a GPIO Pin

- GET /V1/MEDIA/GPIO/<pin>.Direction

Setting the Direction of a GPIO Pin

- SET /V1/MEDIA/GPIO/<pin>.Direction(<dir>)

Querying the Output Level of a GPIO Pin

- GET /V1/MEDIA/GPIO/<pin>.Output

Setting the Output Level of a GPIO Pin

- SET /V1/MEDIA/GPIO/<pin>.Output(<value>)

Setting the Output Level for a Specified Time

- CALL /V1/MEDIA/GPIO/<pin>:interval(<value>;<time>)

Toggling the Level of a GPIO Pin

- CALL /V1/MEDIA/GPIO/<pin>:toggle()

OCS Port Configuration

Querying the Input Level of an OCS Pin

- GET /V1/MEDIA/PCS/P1.InputLevel

Setting the Sensor Type

- SET /V1/MEDIA/PCS/P1.SensorType=<sensor_type>

Querying the Reported OCS State

- GET /V1/MEDIA/PCS/P1.State
Firmware Update

This chapter is meant to help customers perform firmware updates on our products by giving a few tips on how to start and by explaining the features of the Lightware Device Updater v2 (LDU2) software. The latest software and firmware pack can be downloaded from www.lightware.com.

- Introduction
- Preparation
- Running the Software
- Updating via GUI
- Command Line Interface (CLI)
- CLI Commands
- If the Update is not Successful
8. Introduction

Lightware Device Updater v2 (LDU2) software is the second generation of the LFP-based (Lightware Firmware Package) firmware update process.

8.2. Preparation

Most Lightware devices can be controlled over more interfaces (e.g. Ethernet, USB, RS-232). But the firmware can be updated usually over one dedicated interface, which is the Ethernet in most cases.

If you want to update the firmware of one or more devices, you need the following:
- LFP2 file
- LDU2 software installed on your PC or Mac.

Both can be downloaded from www.lightware.com/downloads. Optionally, you can download the release notes file in HTML format.

8.2.1. About the Firmware Package (LFP2 File)

All the necessary tools and binary files are packed into the LFP2 package file. You only need this file to do the update on your device.
- This allows the use of the same LFP2 package for different devices.
- The package contains all the necessary components, binary, and other files.
- The release notes is included in the LFP2 file, which is displayed in the window where you select the firmware package file in LDU2.

INFO: The size of the LFP2 file is more than 200 MB due to the components of the package. That is not a fault. Device runs embedded Linux inside that is necessary for the complex functions and features of the device.

8.2.2. LDU2 Installation

ATTENTION! Minimum system requirement: 2 GB RAM.
INFO: The Windows and the Mac application has the same look and functionality.

Download the software from www.lightware.com/downloads.

Installation in case of Windows OS

Run the installer. If the User Account Control displays a pop-up message, click Yes.

Installation in case of macOS

ATTENTION! Please check the firewall settings on the macOS device. LDC needs to be added to the exceptions of the blocked software for the proper operation.

INFO: This type of installer is equal to the Normal install on Windows.

Installation in case of Linux

Step 1. Download the archive file (tar.gz) from www.lightware.com and unpack it to a temp folder.
Step 2. Run the install_ldu2.sh file in the temp folder. The script will install LDU2 info the following folder: HOME/local/share/lightware/ldu2.
Step 3. The folder above will contain this file: LightwareDeviceUpdaterV2.sh that can be used to start LDU2.
8.3. Running the Software

You have two options:

- Starting the LDU2 by double-clicking on the shortcut/program file, or
- Double-clicking on an LFP2 file.

LDU2 Auto-Update

At startup, the software checks if a newer version is available on the web.

Main Screen

When the software is started by the shortcut, the device discovery screen appears. Press the Discover devices button to start finding the Lightware devices:

![Image of device discovery screen]

Device List

When the discovery has completed, the devices available on the network are listed in the application.

Legend of the Icons

- **IP address editor**: The IP address of the device can be changed in the pop-up window.
- **Identify me**: Clicking on the icon makes the front panel LEDs blink for 10 seconds, which helps to identify the device physically.
- **Authentication required**: The password protection is enabled. You have to enter the password to perform the firmware update in the pop-up window at the beginning of the update.
- **Favorite device**: The device has been marked, thus the IP address is stored. When a device is connected with that IP address, the star will be highlighted in that line.
- **Further information available**: Device is unreachable. Change the IP address using the front panel LCD menu or the IP address editor of the LDU2.
### 8.4. Updating Via GUI

To update the desired device(s) via the Graphical User Interface, follow these steps.

**ATTENTION!** The computer that runs LDU2 and the target device (that will be updated) must be in the same subnet. The update cannot be performed from behind a firewall or gateway.

**ATTENTION!** Updating with firmware will call factory reset on the device and all user setting will be lost.

**ATTENTION!** While the firmware is being updated, the normal operation mode is suspended, as the device is switched to bootloader mode. Signal processing is not performed. Do not interrupt the firmware update. Any problem occurs, reboot the unit and restart the process.

**Device Cloning – Configuration Backup and Restore** feature supports copying all the settings from one device to another, but cloning is only possible between devices using the same firmware. Uploading of the firmware package happens on http (80) and https (443) ports, so one of them has to be enabled.

**Step 1. Select the Firmware Package.**

Click on the **Choose package file** button and navigate to the location where the LFP2 file was saved. When you click on the name of package, the preview of the release notes are displayed in the right panel.

After the package file is loaded, the list is filtered to show the compatible devices only. The current firmware version of the device is highlighted in orange if it is different from the version of the package loaded.

If you start the update by double-clicking on the LFP file, the screen above will be loaded right away.

**The Meaning of the Symbols**

- **Show details**
  - The log about the updating process of the device can be displayed in a new window.

- **Service mode**
  - The device is in bootloader mode. Backup and restore cannot be performed in this case.
8. Firmware Update

**Step 2. Select the desired devices for updating.**
Select the devices for updating; the selected line will be highlighted in green.

**Step 3. Start the update.**
Click on the **Start Update** button to start the procedure. The status is shown in percent in the right side of the device line and the overall process in the bottom progress bar. The device might reboot during the firmware update procedure.

LDU2 uploads the firmware package into the device and the update will be executed internally. After that, LDU2 will disconnect from the device; you can close LDU2.

**Step 4. Wait until the unit reboots with the new firmware.**
Once the firmware update procedure is completed, the device is rebooted with the new firmware. Shutting down and restarting the device is recommended.
8.5. Command Line Interface (CLI)

DIFERENCE: The Command Line Interface is available from LDU2 v2.9.0b9.

The CLI of the LDU2 software is a simple tool for creating scriptable device updates without the need of human interactions. It allows batch updating with the same features which are available in case of GUI usage.

8.5.1. How to Run

Running under Windows® OS

The installer of LDU2 puts the following file into the installation folder:

`LightwareDeviceUpdaterV2_CLI.cmd`

CLI is available via this file, the exe is not suitable for that purpose. Open a command line window to execute or test the features directly.

**Step 1.** Open an Explorer window where the cmd file is located, the default is:

```
c:\Program Files (x86)\Lightware\Lightware Device Updater V2\LightwareDeviceUpdaterV2_CLI.cmd
```

**Step 2.** Click on the address line (highlighted in blue in the picture), type `cmd.exe` and press enter. The command interpreter window of Windows is opened at the path of the LDU2 install folder.

**Step 3.** Now you can use the `LightwareDeviceUpdaterV2_CLI.cmd` file with the commands and options, which are described in the coming sections:

Running under Linux

The Command Line Interface under Linux Operating Systems can be run by the following:

`LightwareDeviceUpdaterV2.sh`

**8.5.2. How to Use**

**Command Structure**

The commands can be run over CLI in the following way:

```
L gh a eDe ceU da e V CLl c d
```

**Step 1.**

```
P g a F e
L gh a eL gh a eDe ceU da e V L gh a eDe ceU da e V CLl c d
```

**Step 2.**

Click on the address line (highlighted in blue in the picture), type `cmd.exe` and press enter. The command interpreter window of Windows is opened at the path of the LDU2 install folder.

**Step 3.** Now you can use the `LightwareDeviceUpdaterV2_CLI.cmd` file with the commands and options, which are described in the coming sections:

Running an update:

```
ba h L gh a eDe ceU da e V h da e
```

The commands and options are the same under Windows® and Linux, too. Following sections contain examples with `LightwareDeviceUpdaterV2_CLI.cmd`.

**8.6. CLI Commands**

INFO: The commands and options described in the following sections are the same under Windows® and Linux, too. The examples contain `LightwareDeviceUpdaterV2_CLI.cmd`.

**About the Examples**

- Sent command is in blue, response is in grey.
- If the response in practice is longer than listed in the example, this symbol can be seen: `[...]`.

**8.6.1. Help**

The defined commands and options can be listed by the `help` command.

Command

`LightwareDeviceUpdaterV2_CLI.cmd help`

Example

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd help
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar help
Command line usage:
Win: LightwareDeviceUpdaterV2_CLI.cmd [command] [options]
Linux: LightwareDeviceUpdaterV2.sh [command] [options]
Commands:
* help
* version
* update
* deviceInfo
* restore
* packageOptions
[...]
```

**Important Notes**

- CLI is case-sensitive (including commands, options and other parameters).
- There is no limit regarding the number of the devices to update. At most 20 devices are updated simultaneously, when one of them is finished, the following (21st) will be started automatically.
- If an update is failed, the IP address of the affected device(s) are listed at the end.

**INFO:**

The defined commands and options can be listed by the `help` command.

**Command**

`LightwareDeviceUpdaterV2_CLI.cmd help`

**Example**

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd help
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar help
Command line usage:
Win: LightwareDeviceUpdaterV2_CLI.cmd [command] [options]
Linux: LightwareDeviceUpdaterV2.sh [command] [options]
Commands:
* help
* version
* update
* deviceInfo
* restore
* packageOptions
```
8.6.2. LDU2 Version

The response shows the version of the LDU2 and the version of the Script API (the Application Programming Interface that is used by the LDU2 and the script).

Command

```
LDU2 version
```

Example

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd version
LDU2 version: 2.10.0b6
```

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar version
Script API version: 1.3.10
```

8.6.3. Check For New LDU2 Version

The following command can be used to check if an update of LDU2 is available. This is just a request, since the CLI is not suitable for handling the complete installer of the software.

Command

```
LDU2 is up-to-date
```

Example 1

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd checkForUpdates
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar checkForUpdates
Current LDU2 version: 2.10.0b6
LDU2 is up-to-date
```

Example 2

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd checkForUpdates
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar checkForUpdates
Current LDU2 version: 2.9.1b1
New version is available online: 2.10.0b6
Download URL: http://update.lightware.hu/ldu2/lwr/v2.10.0b6/install_LDU2_v2.10.0b6.exe
```

8.6.4. Device Info

The most important information about the selected device is displayed; see the example for more details.

Command

```
LightwareDeviceUpdaterV2_CLI.cmd deviceInfo [options]
```

Options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>-i or --ip</td>
<td>List of IP addresses of devices to be updated</td>
<td>one of them is mandatory</td>
</tr>
<tr>
<td>-n or --hostName</td>
<td>List of host names of devices to be updated</td>
<td></td>
</tr>
<tr>
<td>-v or --packageVersion</td>
<td>Shows installed package version only</td>
<td>optional</td>
</tr>
</tbody>
</table>

Example 1

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd deviceInfo --ip
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar deviceInfo --ip
Product name:    MMX2-4x3-H20
IP address:      192.168.1.19
Serial number:   00007316
MAC address:     a8:d2:36:F0:73:16
Part number:     91310078
Device label:    LW_MMX2-4x3-H20_00007316
Package version: v1.3.3b3
CPU FW version:  v1.3.3b3
HW version:      V10_KAK1
Operation mode:  Application mode
```

Example 2

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd deviceInfo --ip 192.168.1.7 --packageVersion
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar deviceInfo --ip 192.168.1.19 --packageVersion
v1.3.3b3
```
8.6.5. Update

This command can be used to update the firmware of the devices.

**Command**

```
L gh a eDe ceU da e V CLI c d da e
```

**Options**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>-p or --package</td>
<td>The path of the firmware package file</td>
<td>yes</td>
</tr>
<tr>
<td>-i or --ip</td>
<td>List of IP addresses of devices to be updated</td>
<td>one of them is mandatory</td>
</tr>
<tr>
<td>-n or --hostName</td>
<td>List of host names of devices to be updated</td>
<td></td>
</tr>
<tr>
<td>--reportProgress</td>
<td>Report update progress in percentage form. Default: false</td>
<td>optional</td>
</tr>
</tbody>
</table>

**Package-specific options**

Certain LFP2 packages have features that can be applied at this command. In that case, there is no need to run the restore command after the update.

**Example**

```
C: \Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar update --ip 192.168.1.19 --package C:\Firmwares\taurus_v1.3.3b3.lfp2 --reportProgress
```

The device will now update itself, which may take tens of minutes.

```
The device is about to reboot. Please wait for the device to finish the update.
```

**ATTENTION!**

As the example shows the firmware update progress is not finished at the "Done" line but the firmware package is uploaded into the device. The switcher will run the update progress internally.

8.6.6. Package Options

Shows package-specific update options.

**Command**

```
L gh a eDe ceU da e V CLI c d ac ageO
```

**Options**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>-p or --package</td>
<td>The path of the firmware package file</td>
<td>yes</td>
</tr>
</tbody>
</table>

**Example**

```
C: \Program Files (x86)\Lightware\Lightware Device Updater V2>packageOptions
```

Package option example can be seen in the following section.
8.6.7. Complex Example

The following options applied:

- Firmware is updated
- Authentication enabled

```cmd
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd update --ip 192.168.1.19 --package C:\Firmwares\taurus_v1.3.3b3.lfp2 --user admin --pw 12345 --reportProgress
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar update --ip 192.168.1.19 --package C:\Firmwares\taurus_v1.3.3b3.lfp2 --user admin --pw 12345 --reportProgress
```

```
[2022-02-11 11:32:40.831] [ INFO] [            main] - Device IPs: [192.168.1.19]
[2022-02-11 11:32:46.096] [ INFO] [            main] - All selected devices are available over the network.

[2022-02-11 11:34:52.599] [ INFO] [    192.168.1.19] - Package upload finished.
[2022-02-11 11:34:52.683] [ INFO] [    192.168.1.19] - Starting internal update process. Device is about to reboot.
[2022-02-11 11:34:52.710] [ INFO] [    192.168.1.19] - Package file has been uploaded successfully.
```

The device will now update itself, which may take tens of minutes. LDU2 is now disconnecting from the device. Please wait until the device finishes the update.

8.6.8. Exit Codes

There is a return value in all cases, when a command run is finished. Currently, three codes are defined:

<table>
<thead>
<tr>
<th>Code</th>
<th>Displayed text</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>N/A</td>
<td>The update performed successfully</td>
</tr>
<tr>
<td>1</td>
<td>Update error (ErrorCode:1)</td>
<td>The error happened during the update</td>
</tr>
<tr>
<td>2</td>
<td>CLI error (ErrorCode:2)</td>
<td>The error happened before starting the update</td>
</tr>
</tbody>
</table>

The error line contains further information about the error.

Querying the Exit Code under Windows®

```cmd
C:\Program Files (x86)\Lightware\Lightware Device Updater V2\echo %errorlevel%
```

Querying the Exit Code under Linux

```bash
echo $?
```

So if this value is queried after the update and it is 0, the update performed successfully.

8.7. If the Update is not successful

- Restart the process and try the update again.
- If the device cannot be switched to bootload (firmware update) mode, you can do that manually as written in the User’s manual of the device. Please note that backup and restore cannot be performed in this case.
- If the backup cannot be created for some reason, you will get a message to continue the process without backup or stop the update. A root cause can be that the desired device is already in bootload (firmware update) mode, thus the normal operation mode is suspended and backup cannot be made.

If an update is not successful, the Export log button becomes red. If you press the button, you can download the log file as a ZIP package, which can be sent to Lightware Support if needed. The log files contain useful information about the circumstances to find the root cause.
9 Troubleshooting

Usually, if the system seems not to transport the signal as expected, the best strategy for troubleshooting is to check signal integrity through the whole signal chain starting from source side and moving forward to receiver end.

First, check the front panel LEDs and take the necessary steps according to their states. For more information about front panel LEDs of the switcher, see the Front View section.

Pictogram Legend

- Section to connections/cabling.
- Section to front panel operation.
- Section to LDC software.
- Section to LW3 protocol commands.

<td>The source sends 4K signals, but the emulated EDID is not supported this resolution.</td>
<td>Check the emulated EDID and select another (e.g. F139 EDID on the input port).</td>
<td>7.6.12</td>
</tr>
</tbody>
</table>

9.2. How to Speed Up the Troubleshooting Process?

Lightware’s technical support team is always working hard to provide the fastest support possible. Our team’s response time is one of the best in the industry, and in the toughest of cases we can directly consult with the hardware or software engineer who designed the product, to get the information from the most reliable source.

However, the troubleshooting process can be even faster... with your help.

There are certain pieces of information that push us in the right direction to finding the root cause of the problem. If we receive most of this information in the first e-mail, or it is gathered at the time when you call us, then there is a pretty high chance that we will be able to respond with the final solution right away.

This information is the following:

- Schematic (a pdf version is preferred, but a hand drawing is sufficient).
- Serial number(s) of the device(s) (it is either printed somewhere on the box or you can query it in the Device Controller software or on the built-in website).
- Firmware versions of the devices (please note that there may be multiple CPUs or controllers in the device and we need to know all of their firmware versions, a screenshot is the best option).
- Cable lengths and types (in our experience, it’s usually the cable).
- Patch panels, gender changers or anything else in the signal path that can affect the transmission.
- Emulated EDID(s) (please save them as a file and send it to us).
- Actions to take in order to re-create the problem (if we cannot reproduce the problem, it is hard for us to find the cause).
- Photo or video about the problem (’image noise’ can mean many different things, it’s better if we see it too).
- Error logs from the Device Controller software.
- In the case of Event Manager issue, the event file and/or backup file from the Device Controller software.

The more of the above information you can give us, the better. Please send this information to the Lightware Support Team (support@lightware.com) to speed up the troubleshooting process.
The following sections contain descriptions and useful technical information how the devices work in the background. The content is based on experiences and cases we met in the practice. These sections help to understand features and technical standards like the following:

- EDID Management
- HDCP Management
- Pixel Accurate Reclocking
10.1. EDID Management

10.1.1. Understanding the EDID

The Extended Display Identification Data (EDID) is the passport of display devices (monitors, TV sets, projectors). It contains information about the capabilities of the display, such as supported resolutions, refresh rates (these are called Detailed Timings), the type and manufacturer of the display device, etc.

After connecting a source to a display (DVI, HDMI, DP), the source reads out the EDID to determine the resolution and refresh rate of the image to be transmitted.

EDID Communication

Most DVI computer displays have 128-byte-long EDID structure. However, Digital Televisions and HDMI capable displays may have another 128 bytes, which is called E-EDID and is defined by CEA (Consumer Electronics Association). This extension contains information about additional Detailed Timings, audio capabilities, speaker allocation and HDMI capabilities. It is important to know that all HDMI capable devices must have CEA extension, but not all devices with CEA extension are HDMI capable.

Common Problems Related to EDID

Problem: "My system consists of the following: a computer, a Lightware device, a WUXGA (1920x1200) LCD monitor, and an SXGA (1280x1024) projector. I would like to see the same image on the monitor and the projector. What EDID should I choose on the Lightware device?"

Solution: If you want to see the image on both displays, you need to select the resolution of the smaller display (in this case SXGA), otherwise the smaller display may not show the higher resolution image.

Problem: "I have changed to a different EDID on an input port of the Lightware device to have a different resolution, but nothing happens."

Solution: Some graphics cards and video sources read out the EDID only after power-up and later they do not sense that EDID has been changed. You need to restart your source to make it read out the EDID again.

10.1.2. Advanced EDID Management

Each DVI sink (e.g., monitors, projectors, plasma displays, etc...) must support the EDID data structure. Source BIOS and operating systems are likely to query the sink using DDC2B protocol to determine what pixel formats and interface are supported. DVI standard uses EDID data structure to identify the monitor type and capabilities. Most DVI sources (VGA cards, set top boxes, etc.) will output DVI signal after accepting the connected sink's EDID information. In the case of EDID readout failure or missing EDID, the source will not output DVI video signal.

Lightware devices provide the Advanced EDID Management function that helps system integration. The built-in EDID Router can store and emulate factory pre-programmed- and User programmable EDIDs. The EDID of the attached monitors or projectors for each output are stored in a non-volatile memory. This way the EDID of a monitor is available when the monitor is unplugged or switched off.

Any EDID can be emulated on any input. An emulated EDID can be copied from the EDID router's memory (static EDID emulation), or from the last attached monitor's memory (dynamic EDID emulation). For example, the Lightware device can be set up to emulate a sink device, which is connected to one of the outputs. In this case, the EDID automatically changes, if the monitor is replaced with another display device (as long as it has a valid EDID).

EDID is independently programmable for all inputs without affecting each other. All inputs have their own EDID circuit.

INFO: The user is not required to disconnect the video cable to change an EDID as opposed to other manufacturer’s products. EDID can be changed even if a source is connected to the input and powered ON.

INFO: When EDID has been changed, the router toggles the HOTPLUG signal for 2 seconds. Some sources do not sense this signal. In such cases, the source device must be restarted or powered OFF and ON again.
10.2. HDCP Management

Lightware Visual Engineering is a legal HDCP adopter. Several functions have been developed that help to solve HDCP related problems. Complex AV systems often have both HDCP and non-HDCP components. The switcher allows transmitting HDCP encrypted and unencrypted signals. The devices will be still HDCP compliant as they will never output an encrypted signal to a non-HDCP compliant display device. If an encrypted signal is switched to a non-compliant output, a red screen alert or muted screen will appear.

10.2.1. Protected and Unprotected Content

Many video sources send HDCP protected signal if they detect that the sink is HDCP capable – even if the content is not copyrighted. This can cause trouble if an HDCP capable device is connected between the source and the display. In this case, the content cannot be viewed on non-HDCP capable displays and interfaces like event controllers. Rental and staging technicians often complain about certain laptops, which are always sending HDCP encrypted signals if the receiver device (display, matrix router, etc.) reports HDCP compliance. Even though, HDCP encryption is not required all the time (e.g. computer desktop image), certain laptops still do that.

To avoid unnecessary HDCP encryption, Lightware introduced the HDCP enabling/disabling function: the HDCP capability can be disabled in the Lightware device. If HDCP is disabled, the connected source will detect that the sink is not HDCP capable, and turn off authentication.

10.2.2. Disable Unnecessary Encryption

HDCP Compliant Sink

All the devices are HDCP-compliant, no manual setting is required, both protected and unprotected contents are transmitted and displayed on the sink.

Not HDCP-compliant Sink 1.

Not-HDCP compliant sink is connected to the switcher. Some sources (e.g. computers) always send HDCP encrypted signals if the receiver device reports HDCP compliancy, however, HDCP encryption is not required all the time (e.g. computer desktop image). If HDCP is enabled in the switcher, the image will not be displayed on the sink.

Setting the HDCP parameter to Auto on the output port and disable HDCP on the input port, the transmitted signal will not be encrypted if the content is not protected. Thus, non-HDCP compliant sinks will display non-encrypted signal.

Not HDCP-compliant Sink 2.

The layout is the same as in the previous case: non-HDCP compliant display device is connected to the switcher but the source would send protected content with encryption. If HDCP is enabled on the input port of the switcher, the source will send encrypted signal.

The sink is not HDCP compliant, thus, it will not display the video signal. If HDCP is disabled on the input port of the switcher, the source will not send the video signal. The solution is to replace the display device to an HDCP-capable one.
10.2.3. HDCP v2.2

HDCP v2.2 is the latest evolution of copy protection. It is designed to create a secure connection between a source and a display. The 2.x version of HDCP is not a continuation of HDCPv1, and is rather a completely different link protection. One of the main differences is the number of the allowed devices within a closed A/V system: HDCP v2.2 allows 32 devices (HDCP v1.4 allows 128 devices). A further limit is that up to four level is allowed, which means the protected signal can be transmitted over at most four repeater/matrix/switcher device. HDCP content protection is activated only if an active video stream is transmitted from the source to the display. The encryption is not activated without a video signal.

HDCP v2.2 standard allows the application of a previous version of HDCP (e.g. HDCP v1.4) between the source and the display if the source device allows it. According to the standard, if the image content is protected with HDCP, the highest supported content protection level has to be applied. However, if the highest level of protection is not justified by the source content, the level may be decreased to avoid compatibility problems; this case is determined by the source.

HDCP v2.2 Source and HDCP v1.4 Sink

In this case the signal of an HDCP v2.2 compliant source is switched to an HDCP v1.4 compliant sink device. The signal is encrypted with HDCP v2.2 on the input and encrypted with HDCP v1.4 on the output of the Lightware device. A lower level of encryption may be applied only if the source device/content allows it - according to the HDCP standard. In this case the HDCP setting on the input port has to be set to HDCP 1.4 and Depends on input on the output port.

HDCP v1.4 Source and HDCP v2.2 Sink

The example below is the reversal of the previous case. An HDCP v1.4 compliant source sends a signal with HDCP v1.4 encryption. The signal is switched to an HDCP v2.2 compliant sink device. In this case the outgoing signal has to be encrypted with the highest supported encryption level towards the sink, as the Lightware device and the sink are both HDCP v2.2 compliant. The HDCP v2.2 standard does not allow keeping the original HDCP v1.4 encryption level on the output.

What Kind of Signal Will be on the Output of the Lightware Device?

See below table that summarizes the possible cases:

<table>
<thead>
<tr>
<th>Incoming Signal</th>
<th>HDCP v1.4 Compatible Sink on the Output</th>
<th>HDCP v2.2. Compatible Sink on the Output</th>
</tr>
</thead>
<tbody>

<tr>
<td>HDCP v2.2 (not convertable)*</td>
<td>Red screen</td>
<td>HDCP v2.2</td>
</tr>
</tbody>
</table>

* Stream type 0: the video stream allows the conversion of the signal to apply a lower level of encryption.
** Stream type 1: the video stream does not allow the conversion of the signal.
10.3. Pixel Accurate Reclocking

Signal reclocking is an essential procedure in digital signal transmission. After passing the reclocking circuit, the signal becomes stable, jitter-free, and can be transmitted over more equipment like processors, or event controllers. Without reclocking, sparkles, noise, and jaggies appear on the image.

Lightware's sophisticated Pixel Accurate Reclocking technology fixes more problems than general TMDS reclocking. It removes not only intra-pair skew, but inter-pair skew as well. The Pixel Accurate Reclocking circuit eliminates the following errors:

**Intra-pair skew**
Skew between the + and - wires within a differential wire pair (e.g. Data2- and Data2+). It's caused by different wire lengths or slightly different wire construction (impedance mismatch) in DVI cable. It results in jitter.

**Inter-pair skew**
Skew between two differential wire pairs in a cable. It is caused by different wire pair lengths or different number of twists in the DVI cable. Too much inter-pair skew results in color shift in the picture or sync loss.

**Jitter**
Signal instability in the time domain. The time difference between two signal transitions should be a fixed value, but noise and other effects cause variations.

**Noise**
Electromagnetic interference between other electronic devices such as mobile phones, motors, etc. and the DVI cable are coupled onto the signal. Too much noise results in increased jitter.

11.1. Specifications

General
Compliance....................................................................................................................... CE
Electrical safety............................................................................................................. IEC 61000-3-2:2013+AMD1:2017
EMC (emission)............................................................................................................. IEC/EN 55032:2015
EMC (immunity)......................................................................................................... IEC/EN 55035:2017
RoHS............................................................................................................................. EN 63000:2018
Warranty..................................................................................................................... 3 years
Operating temperature............................................................................................... 0° to +50°C (+32° to +122°F)
Operating humidity.................................................................................................... 10% to 90%, non-condensing
Cooling....................................................................................................................... Cooling fan

Power
Power supply option.................................................................................................... Power adaptor
Power consumption (MMX2-4x3-H20)........................................................................... max. 8.3 W
Heat dissipation (MMX2-4x3-H20)................................................................................ max. 29 BTU/h

Power adaptor
Supported power source............................................................................................. 100-240 V AC; 50/60 Hz
Supplied power.......................................................................................................... 5V DC, 3A
AC power plug............................................................................................................ Interchangeable (EU, UK, JP/US, AUS/NZ)
DC power plug.......................................................................................................... 2-pole Phoenix® plug

Enclosure
MMX2-4x1-H20
Enclosure material...................................................................................................... 1 mm steel
Dimensions in mm...................................................................................................... 221 W x 68.3 D x 26 H
Dimensions in inch..................................................................................................... 8.7 W x 2.7 D x 1.02 H
Weight......................................................................................................................... 440 g

MMX2-4x3-H20
Enclosure material...................................................................................................... 1 mm steel
Dimensions in mm...................................................................................................... 221 W x 68.3 D x 26 H
Dimensions in inch..................................................................................................... 8.7 W x 2.7 D x 1.02 H
Weight......................................................................................................................... 459 g

Video Inputs
HDMI input
Connector type........................................................................................................... 19-pole HDMI Type A receptacle
A/V standard.............................................................................................................. DVI 1.0, HDMI 1.4, HDMI 2.0
Maximum data rate.................................................................................................... 18Gbps
Maximum pixel clock................................................................................................. 597MHz
HDCP compliance...................................................................................................... HDCP 1.4, HDCP 2.2
Color space............................................................................................................... RGB, YCbCr
Video delay................................................................................................................. 0 frame
Max. video resolution............................................................................................... 4096x2160@60Hz RGB 4:4:4 (up to 600MHz pixel clock)
Reclocking.................................................................................................................... Pixel Accurate Reclocking
Audio mode.............................................................................................................. Simultaneous pass-through and de-embedding to the Audio layer
Supported audio formats for pass-through......................................................... All HDMI 2.0 audio formats
Supported audio formats for de-embedding........................................................ Uncompressed LPCM (up to 8 channels, 192 kHz, 24 bits per sample)
Compressed.............................................................................................................. Dolby Digital, DTS
............................................................................................................................. Compressed HBR
............................................................................................................................. Dolby TrueHD, DTS-HD

Video Outputs
HDMI output
Connector type........................................................................................................... 19-pole HDMI Type A receptacle
A/V standard.............................................................................................................. DVI 1.0, HDMI 1.4, HDMI 2.0
HDCP compliance...................................................................................................... HDCP 1.4, HDCP 2.2
Color space............................................................................................................... RGB, YCbCr
Supported resolutions at 8 bits/color * up to 4096x2048@30Hz (4:4:4) or 4096x2048@60Hz (4:2:0)...................................................................................................................... up to 3840x2160@30Hz (4:4:4) or 3840x2160@60Hz (4:2:0)...................................................................................................................... 1920x1080@60Hz (4:4:4) up to 12 bits/color

Applied firmware package: v1.4.0b4 | LDC software: v2.5.17b2
Audio formats ........................................................................................................... 8 channel PCM, Dolby TrueHD
......................................................................................................................DTS-HD Master Audio 7.1

* All standard VESA and CEA resolutions up to 300MHz (HDMI1.4) and other custom resolutions up to
300Mhz are supported.

Audio Ports

Analog audio output
Connector type ........................................................................................................ 5-pole Phoenix connector
Audio formats ........................................................................................................ 2-ch PCM
Sampling frequency ................................................................................................ 48 kHz
Volume ................................................................................................................. -95.62 dB - 0 dB
Balance ................................................................................................................. -100 - +100 (0 = center)

Control Ports

Ethernet port
Connector type ........................................................................................................ RJ45 female connector
Ethernet data rate ................................................................................................. 10/100Base-T, full duplex with autodetect
Power over Ethernet (PoE) ..................................................................................... Not supported

GPIO port
Connector type ........................................................................................................ 8-pole Phoenix
Function (pin 1-6) ................................................................................................. Configurable (input/output)
Function (pin 7) ..................................................................................................... 5V output
Function (pin 8) ..................................................................................................... Ground

OCS port
Connector type ....................................................................................................... 3-pole Reversed Gender Plug Phoenix connector
Number of configurable pins .................................................................................. 1
Port direction ........................................................................................................... Input

USB port (reserved for future developments)
Connector type ....................................................................................................... A-type and B-type receptacles

RS-232 port
Connector type ....................................................................................................... 3-pole Phoenix connector
Baud rates .............................................................................................................. between 9600 and 115200 baud
Data bits .................................................................................................................. 8

Parity ......................................................................................................................... None / Odd / Even
Stop bits .................................................................................................................. 1 / 2
Output voltage: Low level ...................................................................................... 3 - 15V
Output voltage: High level ...................................................................................... -15V - 3V

Legend

D: DVI EDID
H: HDMI EDID
U: Universal EDID, supporting many standard resolutions:
  - F29: Universal EDID for DVI signals (no audio support).
  - F47: HDMI EDID supporting PCM audio.
  - F48: HDMI EDID supporting all type of audio.
  - F49: HDMI EDID supporting all type of audio and deep color.
  - F84: Universal EDID for analog signals (no audio support).
  - F118: HDMI EDID supporting PCM audio and 4K@30 Hz signals.
  - F119: HDMI EDID supporting all type of audio and 4K@30 Hz signals.

Did (in column EDID features): with Display ID support

Please note that minor changes in the factory EDID list may be applied in further firmware versions.
11.5. Cable Wiring Guide

11.5.1. Serial Ports
The device is built with 3-pole Phoenix connector. See the examples below of connecting to a DCE (Data Circuit-terminating Equipment) or a DTE (Data Terminal Equipment) type device:

<table>
<thead>
<tr>
<th>Lightware device and a DCE</th>
<th>Lightware device and a DTE</th>

<tr>
<td>5: Ground</td>
<td></td>
</tr>
</tbody>
</table>

11.5.2. Audio Ports
Inputs and outputs of audio devices are symmetric or asymmetric. The main advantage of the symmetric lines is the better protection against the noise, therefore they are widely used in the professional audio industry. Symmetric audio is most often referred to as balanced audio, as opposed to asymmetric, which is referred to as unbalanced audio. Lightware products are usually built with 5-pole Phoenix connectors, so we would like to help users assembling their own audio cables. See the most common cases below.

**ATTENTION!** Symmetric and asymmetric lines can be linked with passive accessories (e.g. special cables), but in this case half of the line level is lost.

**ATTENTION!** There are numerous types of regularly used connector and cable types to connect audio devices. Please always make sure that a connector or cable fits your system before use.

**ATTENTION!** Never join the phase-inverted (negative, cold or -) poles (either right and left) to the ground or to each other on the output side, as this can damage the unit.

**INFO:** Use a galvanic isolation in case of a ground loop.

The Pinout of the 5-pole Phoenix Connector

</tr>
</tbody>
</table>

Compatible Plug Type: Phoenix® Combicon series (3.5mm pitch, 5-pole), type: MC 1.5/5-ST-3.5.

11.5.3. OCS Sensor
The switcher is supplied with a 3.81mm 3-pole 90° Reversed Gender Plug Phoenix® connector, which is used for connecting an occupancy sensor. The figure below is an example about how to connect a Leviton OCS10-M0W device. This sensor is a so-called 'active-high' type, thus the setup requires an external 1kΩ pull-down resistor between the input and the ground pins. If your sensor is 'open drain' type, the grey-colored wire and the resistor is not recommended to install.

* The extra wire and the resistor are recommended only for 'active high' type sensors.
INFO: MMX2-4x3-H20 model can be seen in the pictures, but the dimensions are the same for both models. Dimensions are in mm.

11.8. Hashtag Keyword List

This user's manual contains keywords with hashtags (#) to help you find the relevant information as quick as possible.

The format of the keywords is the following:

    #<keyword>

The usage of the keywords: use the Search function (Ctrl+F / Cmd+F) of your PDF reader application, type the # (hashtag) character and the wished keyword.

The #new special keyword indicates a new feature/function that has just appeared in the latest firmware or software version.

Example

    #dhcp

This keyword is placed at the DHCP (dynamic IP address) setting in the front panel operation, the Lightware Device Controller (LDC) and the LW3 programmer’s reference section.

The following list contains all hashtag keywords placed in the document with a short description belonging to them. The list is in alphabetical order by the hashtag keywords.

<table>

11.9. Further Information

Limited Warranty Statement

1. Lightware Visual Engineering LLC (Lightware) warrants to all trade and end user customers that any Lightware product purchased will be free from manufacturing defects in both material and workmanship for three (3) years from purchase unless stated otherwise below. The warranty period will begin on the latest possible date where proof of purchase/delivery can be provided by the customer. In the event that no proof can be provided (empty 'Date of purchase' field or a copy of invoice), the warranty period will begin from the point of delivery from Lightware.

1.1. 25G and MODEX product series will be subject to a seven (7) year warranty period under the same terms as outlined in this document.

1.2. If during the first three (3) months of purchase, the customer is unhappy with any aspect of a Lightware product, Lightware will accept a return for full credit.

1.3. Any product that fails in the first six (6) months of the warranty period will automatically be eligible for replacement and advanced replacement where available. Any replacements provided will be warranted for the remainder of the original unit’s warranty period.

1.4. Product failures from six (6) months to the end of the warranty period will either be repaired or replaced at the discretion of Lightware. If Lightware chooses to replace the product, then the replacement will be warranted for the remainder of the original unit’s warranty period.

2. The above-stated warranty and procedures will not apply to any product that has been:

2.1. Modified, repaired or altered by anyone other than a certified Lightware engineer unless expressly agreed beforehand.

2.2. Used in any application other than that for which it was intended.

2.3. Subjected to any mechanical or electrical abuse or accidental damage.

2.4. Any costs incurred for repair/replacement of goods that fall into the categories above (2.1., 2.2., 2.3.) will be borne by the customer at a pre-agreed figure.

3. All products to be returned to Lightware require a return material authorization number (RMA) prior to shipment, and this number must be clearly marked on the box. If an RMA number is not obtained or is not clearly marked on the box, Lightware will refuse the shipment.

3.1. The customer will be responsible for in-bound, and Lightware will be responsible for out-bound shipping costs.

3.2. Newly repaired or replaced products will be warranted to the end of the originally purchased product’s warranty period.
