Important Safety Instructions

Class I apparatus construction.

This equipment must be used with a mains power system with a protective earth connection. The third (earth) pin is a safety feature, do not bypass or disable it. The equipment should be operated only from the power source indicated on the product.

To disconnect the equipment safely from power, remove the power cord from the rear of the equipment or from the power source. The MAINS plug is used as the disconnect device, the disconnect device shall remain readily operable.

There are no user-serviceable parts inside of the unit. Removal of the cover will expose dangerous voltages. To avoid personal injury, do not remove the cover. Do not operate the unit without the cover installed.

The appliance must be safely connected to multimedia systems. Follow instructions described in this manual.

Replacing the AC fuse

Unplug the AC power cord from the device. Locate the AC fuse on the rear panel. Replace only the AC fuse as indicated on the rear panel. Connect the power cord to the switcher and to the AC power source. Make sure the switcher is working properly.

Ventilation

For the correct ventilation and to avoid overheating, ensure enough free space around the appliance. Do not cover the appliance, leave the ventilation holes free and never block or bypass the ventilators (if there are any).

WARNING

To prevent injury, the apparatus is recommended to be securely attached to the floor/wall or mounted in accordance with the installation instructions. The apparatus shall not be exposed to dripping or splashing, and no objects filled with liquids, such as vases, shall be placed on the apparatus. No naked flame sources, such as lit candles, should be placed on the apparatus.

Waste Electrical & Electronic Equipment (WEEE)

This marking shown on the product or its literature, indicates that it should not be disposed of along with other household wastes at the end of its working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate this from other types of wastes and recycle it responsibly to promote the sustainable reuse of material resources. Household users should contact either the retailer where they purchased this product, or their local government office for details of where and how they can take this item for environmentally safe recycling. Business users should contact their supplier and check the terms and conditions of the purchase contract. This product should not be mixed with other commercial wastes for disposal.

Caution: Laser product

CLASS 1 LASER PRODUCT

Caution - Class 3R visible laser radiation. Avoid direct exposure.

Symbol Legend

The following symbols and markings are used in the document:

**WARNING!** Safety-related information that is highly recommended to read and keep in every case!

**ATTENTION!** Useful information for performing a successful procedure; it is recommended to read.

**DIFFERENCE:** Feature or function that is available with a specific firmware/hardware version or product variant.

**INFO:** A notice, which may contain additional information. Procedure can be successful without reading it.

**DEFINITION:** The short description of a feature or a function.

**TIPS AND TRICKS:** Ideas that you may have not known yet, but can be useful.

Navigation Buttons

- Go back to the previous page. If you clicked on a link previously, you can go back to the source page by clicking the button.
- Navigate to the Table of Contents.
- Step back one page.
- Step forward to the next page.

Document Information

All presented functions refer to the indicated products. The descriptions have been made while testing these functions in accordance with the indicated Hardware/Firmware/Software environment:

Editor: Tamas Forgacs

About Printing

Lightware Visual Engineering supports green technologies and eco-friendly mentality. Thus, this document is primarily made for digital use. If you need to print out a few pages for any reason, follow the recommended printing settings:

- Page size: A4
- Output size: Fit to page or Match page size
- Orientation: Landscape

**TIPS AND TRICKS:** Thanks to the size of the original page, a border around the content (gray on the second picture below) makes it possible to organize the pages better. After punching holes in the printed pages, they can easily be placed into a ring folder.

Hashtag (#) Keywords in the Document

This user's manual contains keywords with hashtag (#) to help you to find the relevant information as quick as possible.

The format of the keywords is the following:

`#<keyword>`

The usage of the keywords: use the Search function (Ctrl+F / Cmd+F) of your PDF reader application, type the # (hashtag) character and the wished keyword.

The `#new` special keyword indicates a new feature/function that has just appeared in the latest firmware or software version.

Example

`#dhcp`

This keyword is placed at the DHCP setting command in the LW3 Programmer's reference section.

See the list of all hashtag keywords of the document in the Hashtag Keyword List section.

1. Introduction

Thank you for choosing Lightware’s MX2M series matrix switchers. In the first chapter we would like to introduce the
device, highlighting the most important features in the sections listed below:

- **DESCRIPTION**
- **MODEL COMPARISON**
- **BOX CONTENTS**
- **FEATURES**
- **TYPICAL APPLICATIONS**
1.1. Description

MX2M-FR24R is a member of the Lightware MX2 modular matrix switcher series, supporting uncompressed 4K UHD resolution at 60Hz with 4:4:4 sampling pattern and with down-conversion capabilities to 4:2:2, supporting HDCP 1.x and 2.3, 3D, Dolby TrueHD and DTS-HD Master Audio. The non-blocking matrix architecture distributes and switches 24 video signals to 24 outputs, distributed along six 4-port boards respectively per direction.

This versatile and customizable device is suitable for various types of applications, the actual application determining the choice of input and output boards to be included in the frame. It is a perfect choice for installations where a huge number of HDMI 2.0 compliant and other types of input and output video ports are required, including HDMI 2.0 and extension through fiber.

Besides the six 4-port input and six 4-port output video boards, there are four low speed installable slots for audio and other low speed signal connectivity.

Control for connected extenders is served by Ethernet layer. The Ethernet layer can also be used for IP extension, as well as for command injection for IR and serial control by third party devices.

For operation safety, power redundancy is available, and PSU drawers are field-exchangeable for ease of maintenance. The device also supports various IT security standards.

Model Denomination

New generation of Lightware matrix switchers

Redundant power supply unit

Frame

Modular matrix switcher

24x inputs and 24x outputs

New generation of Lightware matrix switchers

4-port I/O board

Output board

HDMI 2.0 signal

1.2. Model Comparison

The following table shows detailed information about the different frame types of the MX2M series matrix switches.

1.4. Features

**MX2M Hybrid Frame**

- **4K Video without Compression**
  HDMI 2.0 signal switching with 4k@60Hz and RGB 4:4:4 color space, 18 Gbit/sec bandwidth.

- **Non-blocking Crosspoint Matrix Architecture**
  The router allows any input to be switched to any output or more outputs simultaneously.

- **Hybrid Modular System**
  Custom I/O sizes with several types of input and output boards give the flexibility for interfacing with different video sources and displays.

- **Hot Swappable I/O Boards**
  MX2M series I/O boards and the PSU drawers can be exchanged anytime without powering off the matrix router.

- **Maximum AV Compatibility**
  The matrix is compatible with the latest HDMI 2.0 standard, as well as with HDMI 1.x and DVI 1.0 standards.

- **Multilayer Signal Routing**
  In the MX2M product range Lightware added a third dimension of signal routing, the Media Layers, which provide the flexibility and freedom of independent signal switching. MX2M Hybrid frames manage as many Media Layers as signal types: there are as many individual routers as incorporated signal types.

- **HDCP Compliant**
  MX2M matrix switcher fulfills the HDCP standard. HDCP capability on the HDMI inputs can be disabled when non-protected content is extended.

- **No Signal Latency With Zero Frame Delay**
  The signal management architecture ensures that there is no delay added between the input and the output.

**Advanced EDID Management**
The user can emulate any EDID on the inputs independently, read out and store any attached monitor’s EDID in the internal memory locations.

**Pixel Accurate Reclocking**
Each output has a clean, jitter free signal, eliminating signal instability and distortion caused by long cables or connector reflections on the input side.

**Frame Detector and Signal Analysis**
The exact video and audio signal format can be determined such as timing, frequencies, scan mode, HDCP encryption, color range, color space and audio sample rate.

**Reliability and Redundancy**
At Lightware we build our reputation and pay special attention on designing, developing and making truly reliable products. MX2M hybrid line frames have hot-swappable redundant power supplies. These frames were designed for mission critical operations where redundancy is key and high reliability is required. The redundant hot-swappable power drawers accept AC voltages from 100 to 240 Volts with 50 or 60 Hz line frequency on standard IEC connector.

**Non-Volatile Memory**
The matrix router starts with its latest configuration settings when powered on or after a power failure. Every setting is stored in a non-volatile memory.

**Graphic Display and Rotary Jog Dial Control Knob**
Easy setting and menu navigation are assured by the color graphic display and the comfortable jog dial control.

**Built-in Website**
Easy access from a web browser to control and configure the matrix in systems where the software is not allowed to be installed.

**Ethernet Control**
Multiple simultaneous TCP/IP connections are available with simple ASCII based protocol for controlling and configuring the matrix router.
USB Control
Easily accessible front panel USB configuration port.

RS-232 Control
Simple ASCII-based protocol can be used for switching, preset calling, status request, etc.

MX2M-4HDMI20 Series Boards

- **4K Video without Compression**
  - HDMI 2.0 signal switching with 4k@60Hz and RGB 4:4:4 color space, 18 Gbit/sec bandwidth.
  
- **Consumer Electronics Control**
  - Supports transmitting standard CEC commands in order to remote control the source or sink device.

MX2M-DH-4DP12-IB Board

- **4K Video without Compression**
  - DisplayPort 1.2 signal switching with 4k@60Hz and RGB 4:4:4 color space, 18 Gbit/sec bandwidth.
  
- **Restart Link Training**
  - Allows the DisplayPort Link Training to be restarted in case of no signal or bad quality, without unplugging the cable.

- **DisplayPort Diagnostics and Management**
  - Provides detailed DisplayPort-specific connectivity information: AUX handshaking, 1/2/4 lane count, RBR/HBR/HBR2 datarates. DisplayPort AUX-channel analyzer helps debugging and analyzing handshaking problems.

MX2M-AUX-8AUDIO Board

- **ADC and DAC Audio Signal Conversion**
  - Analog to digital and digital to analog audio signal conversion can be applied by the AUX board.

- **Configurable Audio Ports**
  - All analog audio ports of the board can be configurable as input or output by the user by each.

MX2M-AUX-DANTE-32CH Board

- **Dante® or AES67 Audio**
  - Dante® or AES67 audio signal can be received and the audio of the HDMI / DisplayPort signal can be transmitted as up to 32-channel mono Dante® or AES67 signal over the dedicated RJ45 connectors.

- **Audio Embedding and De-embedding Function**
  - External analog audio signal can embedded in the video stream when a port is configured as analog audio input and can be de-embedded from the video stream when a port is configured as output.
1.5. Typical Applications

1.5.1. Live Event Application
1.5.2. TV Studio Application
2. Product Overview

The following sections are about the physical structure of the device, input/output ports and connectors; software and hardware capabilities:

- Matrix Frame - Front View
- Matrix Frame - Rear View
- Auxiliary (AUX) Boards
- Input (IB) Boards
- Output (OB) Boards
- Power Drawers
- Front Panel LEDs of the Boards
2. Product Overview

Hybrid Modular Matrix Switcher series – User’s Manual

2.1. Matrix Frame - Front View

MX2M-FR24R

1. Output lock
   Locks and protects one or more outputs. See more details in the Output Lock section.

2. Control lock
   Disables or enables front panel button operations. Red light means the switching and function buttons are disabled. See more details in the Control Lock section.

3. Destinations
   Buttons to select an output or to see the state of an output. See more details in the Switching Operations section.

4. Sources
   Buttons to select an input, to select a preset number or to view the state of the selected input port. See more details in the Switching Operations section.

5. Take / Auto
   Switching between Take and Autotake working modes; keep the button pressed for 3 seconds to toggle the modes. See more details in the Take / Autotake Mode section.

6. Preset buttons
   Performing preset operations (Load and Save). See more details in the Preset Operations section.

7. Reset button
   Reboots the matrix; the same as switching it off and on again.

8. Status LEDs
   The status LEDs give immediate feedback about the matrix.

   LIVE
   off
   The device is powered off.

   blinking (green)
   The unit is on and operates properly.

   on (green)
   The device is powered on.

9. LCD screen
   LCD screen showing the most important settings and parameters in the front panel menu. See more details in the Front Panel LCD Menu Operations section.

10. Jog dial control
    Easy setting and menu navigation by the jog dial control. See more details in the Front Panel LCD Menu Operations section.

11. USB control
    USB connection for Lightware Device Controller (LDC) software.

12. Ventilation grille and dust filter
    To ensure the correct ventilation and avoid overheating, provide enough free space around the ventilation holes.

INFO: The rack ears allow to mount the device as a standard rack unit installation and the grips on the two sides of the unit help handling the matrix easier. See more details in the Mounting Options section.
2.2. Matrix Frame - Rear View

**MX2M-FR24R**

- **Power supply units**
  - Hot swap slots for *Power Drawers*. The matrix has redundant power drawers that can be switched on and off without interrupting the video transmission. Using one or both of the power drawers at the same time is also possible. The double power drawer allows connecting them to two different AC power lines to ensure the continuous power for the matrix.

- **Uplink / Secure control connector**
  - Neutrik etherCON Ethernet connector with 1 Gbps Ethernet connection to control the device, firmware update purpose and for user Ethernet access.

- **Uplink connector**
  - Neutrik etherCON Ethernet connector with 1 Gbps Ethernet connections for user Ethernet access.

- **Secure control connector**
  - Neutrik etherCON Ethernet connector with 1 Gbps Ethernet connection to control the device and for firmware update purpose.

- **RS-232 connector**
  - 9-pole D-SUB connector for serial communication to control the device.

- **Service button**
  - Hidden button for special operations.

**Layout of the Input/Output Board Slots and Power Drawer Slots**

The following figure shows the layout of the auxiliary (AUX), input (IB), output (OB) board slots and the order of the power drawers on the rear side of the matrix.

See more details about the installation of the I/O boards in the Board Installation and Handling section.

See more details about the installation of the power supply units in the Power Drawer Installation section.
2.3. Auxiliary (AUX) Boards

2.3.1. MX2M-AUX-DANTE-32CH

Ports
- 4x RJ45 connectors for Dante® network audio

Features
- Transmission of 2 x 16 uncompressed mono audio channels from the audio layer to a Dante network
- Reception of 2 x 16 mono audio channels from a Dante network to the Audio layer
- Dante and AES67 support
- Redundant configuration for the Dante network
- Independent transmission of the same audio content from the Audio layer to two separate Dante networks
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs and the Status LEDs of the SC Connectors sections.

2.3.2. MX2M-AUX-8AUDIO

Ports
- 8x 5-pole Phoenix® connectors for analog audio input or output

Features
- Independently configurable audio interface direction with interface direction indicator (see more details about it in the Analog Audio Port Configuration section)
- ADC conversion of balanced or unbalanced stereo analog audio input to the audio layer
- DAC conversion of uncompressed audio from the Audio layer to the balanced stereo analog audio output
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs and the Analog Audio Input/Output Indicator LEDs sections.

2.4. Input (IB) Boards

2.4.1. MX2M-4HDMI20-IB

Ports
- 4x HDMI input connectors supporting HDMI 2.0 standard

Features
- Uncompressed video up to 18 Gbps datarate (600 MHz pixel clock)
- 4K@60Hz 4:4:4, 18 Gbps bandwidth
- HDMI 2.0 compliant
- HDCP 1.4 and 2.3 support
- Audio signal passthrough and de-embedding to the Audio layer
- HDMI input ports have flange mounting option
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs section.

2.4.2. MX2M-4HDMI20-IB-E

Ports
- 4x HDMI input connectors supporting HDMI 2.0 standard

Features
- Uncompressed video up to 18 Gbps datarate (600 MHz pixel clock)
- 4K@60Hz 4:4:4, 18 Gbps bandwidth
- HDMI 2.0 compliant
- HDCP 1.4 and 2.3 support
- Audio signal passthrough (not connected to the Audio layer)
- HDMI input ports have flange mounting option
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs section.
2. Product Overview

2.4.3. MX2M-4OPTJ-IB

Ports
- 4x multimode SC simplex input connectors supporting HDMI 2.0 standard

Features
- Single Fiber Technology, multimode transmission via SC connector
- Uncompressed video up to 18 Gbps datarate (600 MHz pixel clock)
- 4K@60Hz 4:4:4, 18 Gbps bandwidth
- Compatible with HDMI20-OPTJ-TX90 fiber optical extender
- Audio signal passthrough and de-embedding to the Audio layer
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs and the Status LEDs of the SC Connectors sections.

2.4.4. MX2M-4OPTJ-IB-E

Ports
- 4x multimode SC simplex input connectors supporting HDMI 2.0 standard

Features
- Single Fiber Technology, multimode transmission via SC connector
- Uncompressed video up to 18 Gbps datarate (600 MHz pixel clock)
- 4K@60Hz 4:4:4, 18 Gbps bandwidth
- Compatible with HDMI20-OPTJ-TX90 fiber optical extender
- Audio signal passthrough (not connected to the Audio layer)
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs and the Status LEDs of the SC Connectors sections.

2.4.5. MX2M-DH-4DP12-IB

Ports
- 4x DisplayPort input connectors supporting DisplayPort 1.2 standard

Features
- DisplayPort 1.2 compliant
- DisplayPort input signals are converted to HDMI signals via the built-in chipset on each port
- Supported input format of 4K@60Hz with 4:4:4 sampling pattern and 10 bit per component
- Supports conversion from 4K/UHD at 60Hz 4:4:4 10bit to 4K/UHD at 60 Hz YCbCr 4:2:2 10 bit
- Audio signal passthrough and de-embedding to the Audio layer
- The board is a perfect fit for environments that primarily utilize DisplayPort connectivity for video signal transmission, such as laptops and high-end monitors, without the need for any additional adapters or dongles.
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs section.

1 Input signals that do not fit in the HDMI 2.0 data speeds of 18Gbps can be converted to 4:2:2 while maintaining bit depth, thus allowing for HDR transmission.

2 Ports on the MX2M-DH-4DP12-IB board are recognized by the connected DisplayPort source as DP-to-HDMI converters. Furthermore, it's important to note that DP Multi-Stream (MST), Dual-mode DisplayPort (DP++), Adaptive-Sync and FreeSync® are not supported.
2.4.6. MX2M-DH-4DP12-IB-E

Ports

- 4x DisplayPort input connectors supporting DisplayPort 1.2 standard

Features

- DisplayPort 1.2 compliant
- DisplayPort input signals are converted to HDMI signals via the built-in chipset on each port
- Supported input format of 4K@60Hz with 4:4:4 sampling pattern and 10 bit per component
- Supports conversion from 4K/UHD at 60Hz 4:4:4 10bit to 4K/UHD at 60 Hz YCbCr 4:2:2 10 bit
- Audio signal passthrough (not connected to the Audio layer)
- The board is a perfect fit for environments that primarily utilize DisplayPort connectivity for video signal transmission, such as laptops and high-end monitors, without the need for any additional adapters or dongles.
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs section.

2.5. Output (OB) Boards

2.5.1. MX2M-4HDMI20-OB

Ports

- 4x HDMI output connectors supporting HDMI 2.0 standard

Features

- Uncompressed video up to 18 Gbps datarate (600 MHz pixel clock)
- 4K@60Hz 4:4:4, 18 Gbps bandwidth
- HDMI 2.0 compliant
- HDCP 1.x and 2.3 support
- Audio signal passthrough and embedding from the Audio layer
- HDMI output ports have flange mounting option
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs section.

2.5.2. MX2M-4HDMI20-OB-E

Ports

- 4x HDMI output connectors supporting HDMI 2.0 standard

Features

- Uncompressed video up to 18 Gbps datarate (600 MHz pixel clock)
- 4K@60Hz 4:4:4, 18 Gbps bandwidth
- HDMI 2.0 compliant
- HDCP 1.x and 2.3 support
- Audio signal passthrough (not connected to the Audio layer)
- HDMI output ports have flange mounting option
- Hot-swappable design

See more information about the front panel LED operation in the Status LEDs section.

1. Input signals that do not fit in the HDMI 2.0 data speeds of 18Gbps can be converted to 4:2:2 while maintaining bit depth, thus allowing for HDR transmission.

2. Ports on the MX2M-DH-4DP12-IB board are recognized by the connected DisplayPort source as DP-to-HDMI converters. Furthermore, it's important to note that DP Multi-Stream (MST), Dual-mode DisplayPort (DP++), Adaptive-Sync and FreeSync™ are not supported.

2.7. Front Panel LEDs of the Boards

2.7.1. Status LEDs

Affected auxiliary and I/O boards:
- MX2M-AUX-DANTE-32CH
- MX2M-AUX-8AUDIO
- MX2M-4HDMI20-IB
- MX2M-4HDMI20-IB-E
- MX2M-4OPTJ-IB
- MX2M-4OPTJ-IB-E
- MX2M-DH-4DP12-IB
- MX2M-DH-4DP12-IB-E
- MX2M-4HDMI20-OB
- MX2M-4HDMI20-OB-E
- MX2M-4OPTJ-OB
- MX2M-4OPTJ-OB-E

- **PWR/Live**
  - **off**: The board is not powered.
  - **lit at 50% brightness**: The board is under booting procedure.
  - **blinking fast between 0% and 100% brightness**: The board is fitted in an inappropriate slot (input in an output, output in an input slot). Hence, it is not passing video.
  - **blinking between 50% and 100% brightness**: The board is operational (the embedded software is running on the controller).

- **Active**
  - **off**: The control sequence has not been completed.
  - **on**: The control sequence has been completed and the device is being controlled by the matrix switcher.
  - **blinking (slow)**: The device firmware is under firmware update procedure (bootload mode).
  - **blinking (fast)**: The board is fitted in an inappropriate slot (input in an output, output in an input slot). Hence, it is not passing video.

2.7.2. Status LEDs of the SC Connectors

</tr>
</tbody>
</table>
3. Front Panel Control

Front Panel Control

This chapter is about the operating of operating the device, describing the functions that are available by the front panel controls:

- Front Panel Button Operations
- Front Panel LCD Menu Operations
3. Front Panel Button Operations

The following section describes the crosspoint switching possibilities using the dedicated buttons on front panel of the matrix frame.

3.1.1. Take / Autotake Mode

The matrix switcher has two different switching modes: Take and Autotake. If the Take button is unlit, Take mode is active. When the Take button continuously illuminates green, Autotake mode is selected.

Press and hold the Take button for two seconds to change between Take and Autotake modes.

**Take Mode**

DEFINITION: The Take mode allows the user to connect or disconnect multiple outputs to an input at once, but the layout must be confirmed (executed) by the Take button as a final step. The commands are only realized when the Take button is pressed. If no button is pressed for two seconds, all preselected actions (which were not realized by pressing Take) will be ignored, and the router returns to its idle state. This mode is useful when time delay is not allowed between multiple switching.

**Autotake Mode**

DEFINITION: The Autotake mode means the switching actions are executed immediately (without user confirmation). The switching occurs immediately upon pressing one of the input selector buttons. Autotake mode is useful when immediate actions must be done or fast switching is needed between sources on a particular destination. In this mode switching occurs immediately upon pressing one of the input selector buttons.

3.1.2. View Crosspoint State

The current switching status can be checked on the front panel by using the front panel buttons. The crosspoint state is displayed slightly different in Take or Autotake modes because of the different switching methods.

INFO: View mode does not mean that the router has to be switched in different modes, viewing and switching can be done after each other, without pressing any special buttons.

View Current State in Take Mode

If the router is in Take mode, the user can verify both input and output connections. In Take mode no accidental change can be done unless Take button is pressed.

Press and release a source button. Now the selected source button and all destination buttons that are currently connected to the selected source will light up. This informative display will remain active for three seconds, then all buttons turn dark.

**ATTENTION!** A source button can be pressed twice to preselect all outputs. Outputs that are connected to the pressed input light up and all other outputs start to blink. Some outputs can be unselected if needed, and then pressing Take executes the switching.

INFO: If the pressed destination is locked, then it can not be selected. This is indicated by a short flash of the Output lock when a locked destination is pressed.

3.1.3. Switching Operations

Changing Connections in Take Mode

1. Press and release the desired source button. The pressed source button and all destination buttons that are currently connected to this source will light up. This is an informative display about the current status of the selected input (view only).
2. Press and release the desired destination button(s) that has to be connected to the selected source. The preselected destination button(s) start(s) blinking.
3. Press and release the Take button to execute switching. Now the selected input is switched to the selected output or to the multiple outputs.

**ATTENTION!** A source button can be pressed twice to preselect all outputs. Outputs that are connected to the pressed input light up and all other outputs start to blink. Some outputs can be unselected if needed, and then pressing Take executes the switching.

INFO: If the pressed destination is locked, then it can not be selected. This is indicated by a short flash of the Output lock when a locked destination is pressed.
3. Front Panel Control

Disconnecting or Muting in Take Mode

Step 1. Press and release the selected source button. The pressed source button and all destination buttons that are currently connected to this source will light up.

Step 2. Press and release the desired green lighting destination button. The pressed destination or multiple destinations will turn dark.

Step 3. Press and release the Take button to execute disconnection.

INFO: Deselected destinations are disconnected from any source, thus output devices will display black image or no signal message, or will turn off automatically.

Changing Connections in Autotake Mode

Step 1. Press and release the desired destination button. The pressed destination button and the currently connected source button light up green. If no source is connected (the output is muted), no source button will light up.

Step 2. Press and release the desired source button. Switching is executed immediately. Switching between sources to the selected destination can be done directly.

Disconnecting or Muting in AUTOTAKE Mode

To prevent accidental muting, this action is inhibited (disabled) in Autotake mode. Pressing a source button twice would cause accidental disconnecting.

3.1.4. Preset Operations

DEFINITION: A preset stores a configuration regarding all input connections and mute state for all outputs.

INFO: The matrix switcher has 24 user programmable presets. All presets are stored in a non-volatile memory; the router keeps presets even in the case of a power down. Memory numbers are assigned to source buttons 1 to 24. If the frame has fewer buttons, the higher numbered presets are accessible only through software control.

Saving a Preset in Take Mode

Create the desired connections that have to be saved.

Step 1. Press and release the Save preset button.

Step 2. Press and release a source button according to the desired memory address (source 1 to 24).

Step 3. Press and release the Take button. Now the current configuration is stored in the selected memory.

ATTENTION! Preset save action always stores the current configuration for all outputs including mute state, but ignoring lock state.

Loading a Preset in Take Mode

Step 1. Press and release the Load Preset button.

Step 2. Press and release a source button according to the desired memory address (source 1 to 24).

Step 3. Press and release the Take button. Now the selected preset is loaded.

ATTENTION! Loading a preset modifies all output states that are not currently locked.
Saving a Preset in Autotake Mode

Create the desired connections that have to be saved.

**Step 1.** Press and release Save Preset button.
**Step 2.** Press and release a source button according to the desired memory address (source 1 to 24). Now the current configuration is stored in the selected memory.

**ATTENTION!** Preset save action always stores the current configuration for all outputs including mute state, but lock state is ignored.

Loading a Preset in Autotake Mode

**Step 1.** Press and release Load Preset button.
**Step 2.** Press and release a source button according to the desired memory address (source 1 to 24). Now the selected preset is loaded.

**ATTENTION!** Loading a preset modifies all output states that are not currently locked.

### 3.1.5. Output Lock

**DEFINITION:** The Output lock means that an input port is locked to an output port, and no input change or muting can be executed on that particular output port.

Using Lightware matrix it is possible to lock a state of the destination. This feature prevents an accidental switching to the locked destination in the case of an important signal. Destinations can be independently locked or unlocked. Locking a destination does not affect other destinations.

View Locked Outputs in Take Mode

**Step 1.** Press and release the Output Lock button.
**Step 2.** The Output Lock button starts to blink and all the buttons of any locked destinations light up and remain illuminated for three seconds.

**Locking an Output in Take Mode**

**Step 1.** Press and release the Output Lock button. Now the Output Lock button starts to blink and the buttons of all the locked outputs illuminate green (view state). If no button is pressed for three seconds, the router returns to idle state.

**Step 2.** Press the desired destination buttons. If an unlit destination button is pressed, it starts to blink, indicating that it is preselected for output locking.

**Step 3.** Press and release the Take button. The selected destinations are now locked.

**Unlocking an Output in Take Mode**

**Step 1.** Press and release the Output Lock button. Now the Output Lock button starts to blink and all the locked output's buttons illuminate green (view state). If no button is pressed for three seconds, the router returns to idle state.

**Step 2.** If an illuminating destination button is pressed, it goes off to indicate that it is preselected for unlocking.

**Step 3.** Press and release the Take button. The deselected destinations are now unlocked.

**View Locked Outputs in Autotake Mode**

In Autotake mode a destination is selected all the time. Therefore the currently selected output and input buttons are illuminated. The Output Lock button illuminates regarding the lock state of the current output.

Viewing all locked outputs is not possible in Autotake mode, as pressing the Output Lock button instantly locks or unlocks the current output.
### 3. Front Panel Control

#### 3.2. Front Panel LCD Menu Operations

**3.2.1. Introduction**

The company logo is displayed on the screen during the boot-up. The main menu is displayed after about 30 seconds and the device is ready for use.

**Menu Navigation**

The front panel has a color LCD that shows the most important settings and parameters structured in a menu. The jog dial control knob can be used to navigate between the menu items or change the value of a parameter. The knob can be pressed to enter a menu or edit/set a parameter.

**TIPS AND TRICKS:** The faster you rotate the jog dial, the faster the parameter list is scrolled.

#### The Menu Structure

**Parameter Selection**

The blue colored line means the selected menu/parameter, the green one means the current setting.

**Enter the Menu / Submenu**

The ▶ icon before the line indicates the additional submenus. Click with the rotary to enter. The ◀ icon shows that there is no submenu or setting possibility.

---

### 3.1.6. Control Lock

**DEFINITION:** The Control Lock means to disable the front panel buttons.

While the front panel buttons are disabled, the RS-232, USB and Ethernet control are still enabled. If the button is not illuminated, front panel button operations are enabled. If it illuminates red continuously, front panel operations are inhibited (including LCD menu).

Press and hold the Control lock button for 3 seconds to toggle the control lock state.

---

### 3.1.5. Locking an Output in Autotake Mode

**Step 1.** Press and release the required destination button. Now the selected destination button and the currently configured source button light up (view mode).

**Step 2.** Press and release the Output Lock button. Now the Output Lock button lights up in red, and lock function is activated at once. No source can be changed at the locked destination.

### 3.1.4. Unlocking an Output in Autotake Mode

**Step 1.** Press and release the required destination button that was previously locked. Now the selected destination button, the currently configured source button and the Output Lock button light up.

**Step 2.** Press and release the Output Lock button (deselection). Now the Output Lock button turns off and the port has been unlocked.
3. Front Panel Control

3.2.2. System Settings Menu

Network
The parameters of the network connection can be set in this submenu. The first three lines (IP, Subnet, and Gateway parameters) show the current settings. If the DHCP option is disabled, three more parameters are listed, which can be set for a static IP address:
- Static IP
- Static subnet
- Static gateway

ATTENTION! If you change the network settings, always press the Save option under Network menu (not only in the submenu of the parameter) to apply the new settings.

Time and Date
The internal clock and date that is used for logging events can be set in this submenu.

Restore Factory Defaults
The default settings can be reloaded in this submenu, for details, see the Factory Default Settings section.

Display Brightness
The brightness of the LCD can be set from 1 to 10 on a scale.

3.2.3. Input Ports Menu

Video Input Ports
The most important status information of the video input ports are available in the menu.

INFO: The number of the video input ports depends on the installed IB boards in the matrix switcher.

Legend of the Icons
The icons display information about the port and the incoming signals.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Icon is white (inactive)</th>

3.2.5. EDID Menu

Advanced EDID Management is available in the front panel LCD menu, which allows to view an EDID, switch, or save it to the User EDID memory. See more information about EDID technology in EDID Management section. The EDID memory structure of the device can be found in Advanced EDID Management section.

View

Select the desired EDID memory block: Factory EDIDs, Last attached EDIDs, User EDIDs, or Emulated EDIDs. Select the Name item and press the knob. Use the jog dial to step between the EDIDs. The following information can be checked:

- Preferred Resolution
- Monitor Name
- Audio Info

Switch

The submenu looks similar as the View submenu, but in this case, the Destination is also listed. To change an EDID, do the following steps:

Step 1. Navigate to the EDID / Switch submenu.
Step 2. Select the Source EDID item and press the knob. Use the jog dial to select the desired EDID (F1-F148, U1-U100, or D1-D24) and press the knob.
Step 3. Select the Destination item and press the knob. Use the jog dial to select the desired EDID memory (E1-E2, All) and press the knob.
Step 4. Navigate to the Switch option and press the knob.

Save

The EDID of a connected sink can be saved to the User EDID memory as follows:

Step 1. Navigate to the EDID / Save submenu.
Step 2. Select the Source EDID item and press the knob. Use the jog dial to select the desired EDID (D1-D4) and press the knob.
Step 3. Select the Destination item and press the knob. Use the jog dial to select the desired EDID memory (U1-U12) and press the knob.
Step 4. Navigate to the Save option and press the knob.
3.2.6. Preset Menu

The router can store presets and the following are stored in each slot: Input/output crosspoint state, muted/unmuted states. \( \text{#preset} \)

**ATTENTION!** When factory default settings are restored, presets are deleted.

Load a Preset

**ATTENTION!** The Preset loading has an effect on all ports, except the locked ones.

**Step 1.** Navigate to the Presets / Load Preset submenu and press the knob.

**Step 2.** The previously save presets are listed. Select the desired memory slot and press the knob. If any other preset had been saved previously, they would be also listed.

**Step 3.** Confirm your selection by pressing Yes.

Save a Preset

**Step 1.** Create the desired I/O layout.

**Step 2.** Navigate to the Presets / Save Preset submenu and press the knob.

**Step 3.** Select the desired memory slot and press the knob. If any other preset had been saved previously, they would be also listed. See the corresponding Presets section in the Lightware Device Controller (LDC) software.

**Step 4.** Confirm your selection by pressing Yes.

3.2.7. Health Menu

Health status overview of the matrix switcher and the most important information about the motherboard, control panel, power combiner and the I/O boards of the device.

**Uptime**

The time passed since the last powering up of the device.

**Motherboard**

Temperatures and fan speed status information are listed in the submenu.

**Control Panel**

The temperature of the control panel can be checked in the submenu.

**Power Combiner**

Fan speed, temperature and voltage status information about the Power Combiner 1 and 2 slots.

**IO Boards**

Temperature and voltage status information about the input (IB), output (OB) and auxiliary (AUX) boards.
4. Installation

The chapter is about the installation of the device and connecting to other appliances, presenting also the mounting options and further assembly steps.

- Mounting Options
- Board Installation and Handling
- Power Drawer Installation
- Electrical Connections
- Analog Audio Port Configuration
- Connecting Steps
- Powering On
4.1. Mounting Options

**WARNING!** For the correct ventilation and to avoid overheating, ensure enough free space around the appliance. Do not cover the appliance, leave the ventilation holes free and never block or bypass the fans.

**INFO:** The dimensions of the frame can be found in the Mechanical Drawings section.

Fixing the Handles

Two handles can be mounted on the rack ears of the matrix switcher. The handles are supplied with the product.

Fasten the 2x 2 pcs M5 flat head fixing screws to fix the handles to the rack ears.

---

Standard Rack Installation

Two rack ears are supplied with the product, which are fixed on left and right side as shown in the picture. The default position allows mounting the device as a standard rack unit installation.

**ATTENTION!** Always use all the four screws for fixing the rack shelf ears to the rack rail. Choose properly sized screws for mounting. Keep a minimum of two threads left after the nut screw.
4. Board Installation and Handling

The I/O boards and the PSU drawers are hot-swappables. The matrix is not required to be powered off before removing / inserting a board.

4.2.1. The Layout of the Input/Output Board Slots

The following figure shows the layout and the numbering of the auxiliary (AUX, highlighted in yellow), input (IB, highlighted in purple) and output (OB, highlighted in green) board slots on the rear side of the matrix.

**Auxiliary (AUX) Board Slots**

The first four board slots are dedicated for the auxiliary (AUX) boards, which are also known as low-speed boards. These slots are able to accept AUX boards only.

**The list of AUX boards:**
- MX2M-AUX-DANTE-32CH
- MX2M-AUX-8AUDIO

**Input (IB) Board Slots**

The next six board slots are dedicated for the input (IB) boards, which are also known as high-speed boards. These slots are able to accept IB (high-speed) boards and AUX (low-speed) boards as well.

**The list of the IB boards:**
- MX2M-4HDMI20-IB
- MX2M-4HDMI20-IB-E
- MX2M-DH-4DP12-IB
- MX2M-DH-4DP12-IB-E
- MX2M-4OPT J-IB
- MX2M-4OPT J-IB-E

**Output (OB) Board Slots**

The last six board slots are dedicated for the output (OB) boards, which are also known as high-speed boards. These slots are able to accept OB (high-speed) boards and AUX (low-speed) boards as well.

**The list of the OB boards:**
- MX2M-4HDMI20-OB
- MX2M-4HDMI20-OB-E
- MX2M-4OPT J-OB
- MX2M-4OPT J-OB-E
4.2.2. Installation of an I/O Board

**WARNING!** Please pay attention to the protection against electrostatic discharge when touching a board. Do not touch the electrical components on the board, as the electrostatic discharge may damage them.

**ATTENTION!** Please check the orientation of the slots. The AUX, IB and OB boards are assigned to dedicated board slots in the matrix.

**INFO:** The MX2M series I/O boards are hot-swappable devices. The matrix switcher is not required to be powered off before the board replacement procedure.

The steps of replacing an auxiliary, input or output board are the following:

**Step 1.** Loosen the fixing screws and remove the blank cover or the previously installed board.

**Step 2.** Pull out the board and put it in an ESD-safe bag. Take the board by touching the metal plate only, to prevent ESD-caused problems.

**Step 3.** Place the board into the desired empty slot. Place the edge of the panel carefully to the guide rails on the two sides of the slot. Gently push the board in until it stops, then press the plate at the indicated places at once. Thus, the connector of the board and the motherboard will be put together.

**Step 4.** Tighten the two screws by hand and fix them by a screwdriver with PZ1 head.

**Step 5.** Connect the necessary cables to the boards and switch on the matrix.

**Step 6.** Wait until the booting procedure of the board is completed.

**INFO:** If the firmware version of the installed I/O board is different than the firmware version of the matrix frame, it is being updated by the matrix automatically.

4.3. Power Drawer Installation

Two dedicated power drawer slots are available in the matrix frame for the MX2M-PSU-500-F and MX2M-PSU-1250-FP power supply units. The power drawer of the frame is hot-swappable, thus you do not have to switch off the matrix to replace or install a power drawer.

**The Steps of the Power Drawer Replacement**

**Step 1.** Push down the fixing plate on the power drawer.

**Step 2.** Pull out the power drawer using the handle.
4. Installation

**Hybrid Modular Matrix Switcher series – User’s Manual**

Applied firmware package: v1.2.1 | LDC software: v2.5.15b2

---

**Step 3.** Place the new power drawer to the power drawer slot and push it using the handle until the device connects to the motherboard of the frame.

**ATTENTION!** Make sure that the fixing plate is correctly in its place.

---

**4.4. Electrical Connections**

The following sections describe all possible electrical connections of the MX2M series frames, power drawers and I/O boards.

**4.4.1. AC Power Connection**

MX2M-PSU-500-F and MX2M-PSU-1250-FP power drawers contain standard IEC power connector and work with 100 to 240 Volts AC, 50 Hz or 60 Hz power sources.

<table>
<thead>
<tr>
<th>Power drawer</th>

<td>2</td>
<td>1250 W</td>
</tr>
</tbody>
</table>

See the details about the powering on procedure in the **Powering On** section.

**4.4.2. USB Mini-B Connector**

MX2M series matrix frame provides standard USB 2.0 mini B-type connector for software control and firmware update purpose.

---

**4.4.3. Ethernet Connectors**

**Neutrik etherCON Connectors**

MX2M series matrix frame provides Neutrik etherCON RJ45 connectors for secure control purpose, LAN and user Ethernet access.

**Standard RJ45 Connector**

MX2M-AUX-DANTE-32CH I/O board provides standard RJ45 connectors for LAN and user Ethernet access. Always use high quality Ethernet cables.

**Wiring of LAN Cables**

Lightware recommends the termination of LAN cables on the basis of TIA/EIA T 568 A or TIA/EIA T 568 B standards.

<table>

4.4.5. Symmetrical Analog Stereo Audio Connector

MX2M-AUX-8AUDIO auxiliary board provides 5-pole Phoenix connectors, which are used for balanced analog audio (line in/out). Unbalanced audio signals can be connected as well. For asymmetrical output, connect only + and ground. For asymmetrical input, connect + and ground to the source and connect – to the ground.

Compatible Plug Type
Phoenix® Combicon series (3.5mm pitch), type: MC 1.5/5-ST-3.5.

<table>

</tbody>
</table>

4.4.6. HDMI Connector

MX2M-4HDMI20 series I/O boards provide standard 19-pole HDMI connectors for inputs and outputs with HDMI 2.0 support. Always use high quality HDMI cables for connecting sources and displays.

INFO: HDMI input and output connectors have flange mounting option.
You can find more information about the video related functions in the Video Layer section.

4.4.7. DisplayPort Connector

MX2M-DH-DP12-1B series input boards provide standard 20-pole DisplayPort connectors for inputs with DisplayPort 1.2 support. Always use high quality DP cables for connecting sources and displays.
You can find more information about the video related functions in the Video Layer section.

4.4.8. SC Fiber Optical Connector

MX2M-4OPT J series I/O boards provide multimode SC simplex fiber optical input and output connectors. The connectors are compatible with the HDMI20-OPT-J-90 series fiber optical extenders.
You can find more information about the video related functions in the Video Layer section.

Maximum cable distances can be found in the Maximum Cable Distances section.

4.5. Analog Audio Port Configuration

The analog audio ports of the MX2M-AUX-8AUDIO board can be configured as input and output by the user. The port configuration can be done by placing a jumper to the right pins.

WARNING! Always apply ESD-protection during the port configuration. Electric discharge may harm the electric parts of the board.

Steps of the Configuration

Step 1. Release the two fixing screws of the board and pull it out.
Step 2. Find the 3-pole port configuration pin set behind the 5-pole Phoenix connector.
Step 3. Place the jumper to re-configure the port as follows:

The port is configured as an input

The port is configured as an output

Step 4. Place the board into the desired slot.
Step 5. Tighten the two screws by hand and fix them by a screwdriver with PZ1 head.
Step 6. Connect the necessary cables to the boards and switch on the matrix.
Step 7. Wait until the booting procedure of the board is completed.
4.6. Connecting Steps

**Interface of AUX**

Connect the source / sink devices (e.g. media player) to the ports of the MX2M-AUX series boards via the interface of the board. See the connection possibilities grouped by I/O board variants:

- **MX2M-AUX-8AUDIO** - Connect audio source devices to the audio input connectors and audio sink devices to the audio output connectors. The input/output function of the ports can be modified anytime by the user, see the details in the Analog Audio Port Configuration section. See the wiring guide for the Phoenix 5-pole connector in the Cable Wiring Guide section.

- **MX2M-AUX-DANTE-32CH** - Connect the Dante® or AES67 audio source and sink devices to the Primary connectors and the redundant connections to the Secondary connectors via Ethernet cables. The recommended cable type for 1 GbE signal transmission is CAT5e or CAT7e up to 100 m.

**Interface of IB**

Connect the AV source devices (e.g. 4K media server) to the ports of the MX2M-IB series boards via the interface of the board (DisplayPort, HDMI, fiber optical, etc). See the connection possibilities grouped by I/O board variants:

- **MX2M-4HDMI20-IB / MX2M-4HDMI20-IB-E** - Connect the source devices using the HDMI 2.0 ports by HDMI cables.
- **MX2M-4OPTJ-IB / MX2M-4OPTJ-IB-E** - Connect a single multimode fiber optical cable between the OPTJ SC connectors and the HDMI20-OPTJ-TX90 extenders. See the details about the maximum fiber cable extensions in the Maximum Cable Distances section.

**Interface of OB**

Connect the AV sink devices to the ports (e.g. 4K wall display) of the MX2M-OB series boards via the interface of the board (HDMI, fiber optical, etc). See the connection possibilities grouped by I/O board variants:

- **MX2M-4HDMI20-OB / MX2M-4HDMI20-OB-E** - Connect the sink devices using the HDMI 2.0 ports by HDMI cables.
- **MX2M-4OPTJ-OB / MX2M-4OPTJ-OB-E** - Connect a single multimode fiber optical cable between the OPTJ SC connectors and the HDMI20-OPTJ-RX90 extenders. See the details about the maximum fiber cable extensions in the Maximum Cable Distances section.

**RS-232**

Optionally for RS-232 control: connect a controller device (e.g. touch panel) to the RS-232 port.

**CATx**

Connect the matrix switcher to a controller device (e.g. laptop) via the Secure Control port over a CATx cable. The port supports 1 GbE data transmission.

**CATx**

Connect the matrix switcher to a LAN via the Uplink and Uplink / Secure Control ports over CATx cables. The Uplink port is for user Ethernet access; the Uplink / Secure control port is for user Ethernet access or control the matrix switcher. Both ports support 1 GbE data transmission.

**Power**

Connect the power cords to the AC power sockets and to the matrix. If the matrix is purchased with only one power drawer, connect the power cord to the AC power socket and to the matrix. See more details about it in the Single PSU License section. The matrix has redundant PSU drawers, which can be switched on and off without interrupting the video transmission. Using one or both of the PSU drawers at the same time is also possible. The double power drawer allows connecting them to two different AC power lines to ensure the continuous power for the matrix. See more details about the powering on procedure in the Powering On section.
4.7. Powering On

Connect the power cords to AC input of the power drawers (MX2M-PSU-500-F / MX2M-PSU-1250-FP).

INFO: The router has an internal emergency memory that stores all current settings and tie configurations. This memory is independent from presets and invisible to the user. This built-in feature helps the system to be ready immediately in case of power failure or accidental power down.

Powering On Procedure

After switching the power switch to the ON position, the router starts up. If the switch is in the ON position, then the matrix starts up immediately when the power cord is connected to the AC source. During the initial self-test and loading of the latest settings, The matrix is about to start appears on the LCD screen and the router reloads its last configuration.

INFO: After switching ON, the router reloads the latest settings that were used before it was switched off. The router has an internal emergency memory that stores all current settings and tie configurations.

Redundant Power Supplies

The matrix has redundant power drawers which can be switched on and off without interrupting the video transmission. Using one or both of the power drawers at the same time is also possible.

The double power drawer allows connecting them to two different AC power lines to ensure the continuous power for the matrix. The power drawers are hot-swappable.
5. Hybrid Modular Matrix Concept

The following chapter describes the features of the MX2M series frame and I/O boards with few real-life examples.

The topics that are described:

- Video Layer
- Audio Layer
- Consumer Electronics Control (CEC) Interface
- Ethernet Layer
- Licensing
- Further Built-in Features
- Software Control Modes
5. Video Layer

5.1. Port Diagram

The MX2M matrix receives video streams with the embedded audio signal via various types of multimedia ports, which depend on the installed I/O boards. The video streams can be switched to any destination port in the video crosspoint sized up to 24x24.

The video and audio layers are independent of each other. The audio signal is copied to the Audio layer from the stream and routed to the audio crosspoint, where it can be switched to the AV outputs (HDMI or fiber optical) and the audio outputs (analog audio or Dante network) as well.

Audio input signals can be received via the analog audio input and Dante audio network. The audio streams can be switched to the audio outputs (analog audio or Dante network) or can be embedded into the output streams (HDMI or fiber optical).

See more details about the audio layer and the available options in the Audio Layer section.

There are video processors on the input and output sides as well. Available functions are the following, grouped by AV interfaces:

- **HDMI 2.0**
  - **Input side**: no video processing can be applied.
  - **Output side**: the sampling pattern can be converted from 4:4:4 to 4:2:2.

- **DP 1.2**
  - **Input side**: the sampling pattern can be converted from 4:4:4 to 4:2:2 or 4:2:0 and the color depth can be converted 12 bit to 8 bit per channel if the signal bandwidth is greater than 18 Gbit/s.
  - **Output side**: the sampling pattern can be converted from 4:4:4 to 4:2:2.

**Attention!** The MX2M-4HDMI20-OB output board accepts video signals in 8, 10 and 12 bit color depth, but the sampling pattern conversion is always made in 8 bit.

- **OPTJ**
  - **Input side**: no video processing can be applied.
  - **Output side**: the sampling pattern can be converted from 4:4:4 to 4:2:2.

INFO: The available audio and video interfaces depend on the installed I/O boards.
5.1.2. Video Signal Transmission - Example

The Concept

The matrix frame is installed with seven different type of I/O boards:

<table>
<thead>
<tr>
<th>I/O board</th>
<th>Connection interface</th>
<th>Signal direction</th>
<th>Connected device</th>
<th>Able to de-embed/embed audio to/from Audio layer?</th>
</tr>
</thead>
<tbody>
<tr>
<td>MX2M-DH-4DP12-IB-E</td>
<td>DisplayPort</td>
<td>Input</td>
<td>Barebone PC</td>
<td>✗</td>
</tr>
<tr>
<td>MX2M-4HDMI20-IB</td>
<td>HDMI</td>
<td>Input</td>
<td>Blu-ray player</td>
<td>✗</td>
</tr>
<tr>
<td>MX2M-DH-4DP12-IB</td>
<td>DisplayPort</td>
<td>Input</td>
<td>MacBook</td>
<td>✗</td>
</tr>
<tr>
<td>MX2M-4OPTJ-IB</td>
<td>Multimode fiber optical</td>
<td>Input</td>
<td>4K PC over a HDMI20-OPTJ-TX90 fiber optical transmitter</td>
<td>✗</td>
</tr>
<tr>
<td>MX2M-4OPTJ-OB</td>
<td>Multimode fiber optical</td>
<td>Output</td>
<td>Wall display over a HDMI20-OPTJ-RX90 fiber optical receiver</td>
<td>✗</td>
</tr>
<tr>
<td>MX2M-4HDMI20-OB</td>
<td>HDMI</td>
<td>Output</td>
<td>4K TV</td>
<td>✗</td>
</tr>
<tr>
<td>MX2M-4OPTJ-OB-E</td>
<td>Multimode fiber optical</td>
<td>Output</td>
<td>4K projector over a HDMI20-OPTJ-RX90 fiber optical receiver</td>
<td>✗</td>
</tr>
</tbody>
</table>

The video signals of the input boards can be routed to any port of the output boards. The video crosspoint settings can be set using four different methods:

- Front panel buttons - see the details in the Switching Operations section;
- Built-in website / Lightware Device Controller (LDC) software - see the details in the Crosspoint Menu section;
- LW3 protocol commands - see the details in the Video Switching and Crosspoint Settings section.

Available Video Related Settings

The following settings and options are available for the video stream input:

- **MX2M-4HDMI20-IB** and **MX2M-4OPTJ-IB** boards:
  - Input port HDCP capability setting
- **MX2M-DH-4DP12-IB** board:
  - Sampling pattern conversion to 4:2:2 or 4:2:0
  - Color depth conversion to 8 bit per channel
  - Input port HDCP capability setting

The following settings and options are available for the video stream output:

- Sampling pattern conversion to 4:2:2
- Output port HDCP mode setting
- Audio stream embedding setting

**ATTENTION!** The following I/O boards only have audio passthrough capability: MX2M-4HDMI20-IB-E, MX2M-4OPTJ-IB-E, MX2M-DH-4DP12-IB-E, MX2M-4HDMI20-OB-E and MX2M-4OPTJ-OB-E. It means the boards are not connected to the Audio layer, and audio stream embedding and de-embedding are not possible in case of these I/O boards.
5.2. Audio Layer

5.2.1. Overview

The embedded digital audio of the input video stream is copied to the Audio layer and it can be selected to the analog audio interface as well.

On the output side the audio signal can be selected for the output video stream: the original embedded audio is transmitted together with the video or it is changed to another audio (even analog audio) signal that can be selected in the audio crosspoint table.

5.2.2. Digital Audio Interface

Inputs

The matrix is able to receive embedded audio streams via the digital video interfaces:

- Embedded HDMI audio over the MX2M-4HDMI20-IB board;
- Embedded HDMI audio over the MX2M-4OPT J-IB board;
- Embedded DisplayPort audio over the MX2M-DH-4DP12-IB board.

**ATTENTION!** The following input boards only have audio passthrough capability: MX2M-4HDMI20-IB-E, MX2M-4OPTJ-IB-E and MX2M-DH-4DP12-IB-E. It means the boards are not connected to the Audio layer, and audio stream de-embedding is not possible in case of these I/O boards.

INFO: The audio signal can be one that the HDMI 2.0 standard supports.

Outputs

The matrix is able to transmit audio streams from the Audio layer as audio embedded in the output video signal, provided that the signal on the audio layer qualifies for embedding.

The digital video signals can be:

- LPCM audio format;
- Low bitrate (<6,144 Mbit/s) audio format.

**ATTENTION!** The following output boards only have audio passthrough capability: MX2M-4HDMI20-OB-E and MX2M-4OPTJ-OB-E. It means the boards are not connected to the Audio layer, and audio stream embedding is not possible in case of these I/O boards.

INFO: The audio signal can be 2-channel PCM up to 48kHz or compressed (non-HBR) audio.

Crosspoint Settings

The audio layer is independent of the video layer. Thus, any audio input signal can be selected to any output. However, there are limitations on how the respective output can treat the signal:

- Only LPCM audio signals routed from the Audio layer can be selected to the audio outputs of the MX2M-AUX-8AUDIO or MX2M-AUX-DANTE-32CH auxiliary boards;
- Only LPCM and compressed (<6,144 Mbit/s) audio signals routed from the Audio layer can be selected to the outputs of the MX2M series video output boards.

INFO: In case of LPCM audio, at most two channels can be selected for embedding into the output HDMI stream.

5.2.3. Analog Audio Interface

**DIFFERENCE:** The analog audio interface is available only when the MX2M-AUX-8AUDIO auxiliary board is installed.

Configurable Ports

The MX2M-AUX-8AUDIO board is built with 8 pieces of 5-pole Phoenix® analog audio ports. Each port can be configured as input or output. See the details about the steps of the configuration in the Analog Audio Port Configuration section.

Input Side

The matrix is able to receive analog audio streams via the analog audio interface. The received audio stream is converted to digital audio signal and can be embedded to any digital video signal on the output side.

**INFO:** The analog audio signal is converted to LPCM with a sampling frequency of 48kHz.

The following audio settings are available for the analog audio input signal:

- Volume adjusting
- Balance setting
- Gain setting

The audio settings are available in the Built-in website / Lightware Device Controller (LDC) software (details in the Analog Audio Input Port Properties section) and using LW3 protocol commands (details in the Analog Audio Port Properties section).

Output Side

The matrix is able to transmit analog audio streams via the analog audio interface. The transmitted signal can originate from an analog audio interface, can be de-embedded digital audio signal from any digital video interfaces, or it can come from the MX2M-AUX-DANTE-32CH board.

**INFO:** The analog audio signal is converted to LPCM with a sampling frequency of 48kHz on the input side.

The following audio settings are available for the analog audio output signal:

- Volume adjustment
- Balance setting

The audio settings are available in the Built-in website / Lightware Device Controller (LDC) software (details in the Analog Audio Output Port Properties section) and using LW3 protocol commands (details in the Analog Audio Port Properties section).
5.2.4. Dante® Audio Interface

DIFFERENCE: The Dante/AES67 audio interface is available only when a MX2M-AUX-DANTE-32CH board is installed in the matrix frame.

Digital AoE (Audio over Ethernet) signals can be received and transmitted over the Dante audio interface. The input signals can be routed to any interface within the matrix, for example it can be embedded into the HDMI output signal or transmitted as analog audio. The Dante output signal can be sourced from any other input signal type, for example it can be de-embedded from the HDMI signal or can be received from a microphone as analog audio input.

Supported Audio

<table>
<thead>
<tr>
<th>Signal type</th>
<th>Input Ports</th>
<th>Output Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>PCM 16</td>
<td>✓</td>
<td>✗</td>
</tr>
<tr>
<td>PCM 24</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>Compressed DTS/Dolby</td>
<td>✗</td>
<td>✗</td>
</tr>
</tbody>
</table>

**ATTENTION!** The supported sample rates are 44.1, 48, 88.2 and 96 kHz.

Important Notes

- It is essential to have the right QoS settings in the network switch where the Dante® audio is connected to. See the details in the Switch Setup for Dante® Audio Signal Transmission section.
- The AES67 mode is supported by the MX2M-AUX-DANTE-32CH auxiliary board, which can be set in the Dante® Controller software.
- Multichannel or encoded audio format cannot be de-embedded. In this case, no audio is sent to the Dante® network.

Dante® is a registered trademark of Audinate Pty Ltd.
Dante/AES67 Signal Routing

Dante or AES67 audio signals can be routed to any other interface types within the matrix switcher. The Dante source signal can be embedded to the HDMI signal or transmitted to an analog audio sink device. De-embedded DisplayPort audio can also be transmitted as Dante audio to a network audio sink device.

The Dante audio settings are available in the Built-in website / Lightware Device Controller (LDC) software (details in the Dante® Audio Input Port Properties and Dante® Audio Output Port Properties sections) and using LW3 protocol commands (details in the Dante® Audio Settings section).

5.2.5. Multichannel Routing to the Outputs

This section explains how to transmit a multichannel audio signal to the audio output ports of the matrix.

Example

In our example an 8-channel LPCM audio signal is required to transmit over the MX2M-AUX-DANTE-32CH auxiliary board of the matrix. The figure below shows the method that can be used for transmitting the 8 channels to the output ports.

Required Settings

Step 1. Switch the input port (I1) to four output ports (O25; O26; O27; O28) in the crosspoint table. It can be done using one of the following methods:

▪ via Lightware Device Controller (LDC) software - see the details in the Audio Layer section.
▪ via LW3 protocol commands - see the details in the Switching an Input to an Output section.

Step 2. Set the channel mapping to select the desired channels for the output ports. Ensure that all input channels are routed to different output channels. The channel mapping can be done using one of the following methods:

▪ via Lightware Device Controller (LDC) software - navigate to the Port properties panel of each selected output port by clicking on the output port icon and complete the channel mapping settings. See the details in the Dante® Audio Output Port Properties section.
▪ via LW3 protocol commands - see the details in the Channel Mapping section.
5.2.6. Audio Signal Transmission - Example

### The Concept

The matrix frame is installed with different types of I/O boards:

<table>
<thead>
<tr>
<th>I/O board</th>

<td>4K projector over a HDMI20-OPTJ-RX90 fiber optical receiver</td>
<td>☑</td>
</tr>
</tbody>
</table>

### Inputs

The matrix can receive audio signals from three types of sources:

- **Analog audio** from the microphone - it is converted to 2-channel LPCM signal and routed to the Audio layer;
- **Digital embedded HDMI audio** from the Blu-ray player - the signal is de-embedded and copied to the Audio layer.
- **AoE (Audio over Ethernet)** audio signal from the Dante media player via the network - the digital audio signal is copied to the Audio layer.

**ATTENTION!** The following input boards only have audio passthrough capability: MX2M-4HDMI20-IB-E, MX2M-4OPTJ-IB-E and MX2M-DH-4DP12-IB-E. It means the boards are not connected to the Audio layer, and audio stream de-embedding is not possible in case of these I/O boards.
5. Hybrid Modular Matrix Concept

Outputs

On the output side, the matrix can transmit three types of audio signals:

- **Analog audio signal** to the active speakers - the transmitted audio signal can be 2-channel LPCM only. As the selected signal can include more than two audio channels, the user can select the two channels to be transmitted on the analog audio interface.

- **Digital embedded HDMI audio** to the 4K TV - the embedded audio signal can be 2-channel LPCM or compressed (non-HBR) audio signal only. There are two possibilities in case of audio signal embedding:
  - If the selected signal is of type LPCM, the user can select the two channels to be transmitted.
  - If the selected signal is compressed (non-HBR) audio, it can be embedded into the video stream without any further action.

- **AoE (Audio over Ethernet) audio signal** to the Dante audio amplifier via the network - the transmitted audio signal can be PCM 16 and PCM 24 audio signals up to 16 channels. If the selected signal includes more than two audio channels, the user can select the two channels to be transmitted.

**ATTENTION!** The following output boards only have audio passthrough capability: MX2M-4HDMI20-OB-E and MX2M-4OPTJ-OB-E. It means the boards are not connected to the Audio layer, and audio stream embedding is not possible in case of these I/O boards.

See more details about the related settings in the Lightware Device Controller (LDC) software in the Audio Port Properties Windows section.

5.3. Consumer Electronics Control (CEC) Interface

Consumer Electronics Control (CEC) is a bi-directional communication, defined in the HDMI standard. This feature is for remote control of the source and sink devices in the AV system.

MX2M-4HDMI20 and MX2M-4OPTJ series I/O boards are able to send and receive CEC commands, from the input ports towards the source, and from output port towards the sink. For more information about sending CEC messages, see the CEC Controller (LDC) and the Sending CEC Commands (LW3 protocol commands) sections.

**ATTENTION!** CEC has a dedicated pin in the HDMI connector. DVI connector does not contain this pin, so the CEC transmission brakes when HDMI-DVI connector or adapter is in the signal route.

5.4. Ethernet Layer

**INFO:** All three Ethernet ports of matrix (Secure Control; Uplink; Uplink/Secure Control) are equivalent and they can be used for controlling the system.

5.4.1. Control Mode

The matrix can be controlled using the three Ethernet ports with Neutrik RJ45 connectors, which provide 1 GbE data transmission each. The ports accept cables built with Neutrik and RJ45 connectors as well. The device can be controlled over the Ethernet interface using different methods. See the details about it in the Software Control Modes section.

5.4.2. Firmware Update Mode

The firmware update of the matrix frame can be applied over the Ethernet interface using the Ethernet ports. The firmware files of the I/O boards are built in the firmware package of the matrix. The firmware update of the I/O boards is done over the internal Ethernet layer. See the details about the firmware update procedure in the Firmware Updating of the I/O Boards section.
5.4.3. User Ethernet Mode

The MX2M series matrix switchers use the **User Ethernet mode**, which acts roughly as an unmanaged Ethernet switch from the point of the customer. The User Ethernet mode provides three equal ports for the customer UP1, UP2 and UP3.

**Limitations**

Since the MX2M Ethernet network transfers internal audio streams and control frames as well, there are some limitations:

- **VLAN ID 100** cannot be used, it is reserved for the internal control frames;
- **VLAN ID 300** cannot be used, it is reserved for the internal audio streams.

**ATTENTION!** Customer frames with PCP 7 should be avoided in order to preserve the internal audio stream transfer.

5.5. Licensing

**Single PSU License**

MX2M-FR24R matrix switcher can be purchased with no PSU redundancy. In this case only one PSU drawer is installed with a power supply unit (Power Drawer 1, Primary) and the **Single PSU License** is installed on matrix. In this case, the Power Drawer 2 cannot accept the second PSU drawer. Customers have possibility purchasing a code which makes the Single PSU License inactive. For more details please contact sales@lightware.com.

You can check, add or remove licenses to the system with two methods:

- via **Built-in website / Lightware Device Controller (LDC)** software - see the details in the Overview section;
- using LW3 protocol commands - see the details in the Adding License and Removing License sections.

5.6. Further Built-in Features

5.6.1. Device Cloning – Configuration Backup and Restore

The device (configuration) cloning of MX2M matrix switcher is a simple method that eliminates the need to repeatedly configure certain devices to have identical (non-factory) settings. If the devices are installed in the same type of system multiple times, then it is enough to set up only one device to fit the user’s needs and then copy those settings to the others, thus saving time and resources.

See more information about the settings in the System section.

5.6.2. Advanced EDID Management

**Factory Preset EDIDs**

The factory EDIDs (F1-F148) are factory preprogrammed and cannot be modified. These are the most common signal formats. They are specially provided to force graphic cards to output only the exact pixel resolution and refresh rate.

Universal EDID allows multiple resolutions including all common VESA defined resolutions. The use of universal EDID is recommended for fast and easy system setup.

**Sources and Destinations**

The EDID memory consists of four parts:

- **Factory EDID** list shows the pre-programmed EDIDs (F1-F148).
- **Dynamic EDID** list shows the sink connected to the device’s outputs (D1-D24). The unit stores the last display devices’ EDID on either output, so there is an EDID shown even if there is no display device attached to the output port at the moment.
- **User memory locations** (U1 – U100) can be used to save custom EDIDs.
- **Emulated EDID** list shows the currently emulated EDID for the inputs (E1-E24). The source column displays the memory location that the current EDID was routed from.

The source reads the EDID from the Emulated EDID memory on the input port. Any EDID from any of the User/Factory/Dynamic EDID lists can be copied to the emulated EDID memory.

There are two types of emulation: static and dynamic.

- **Static EDID emulation**: an EDID from the Factory or User EDID list is selected. Thus, the Emulated EDID remains the same until the user emulates another EDID.
- **Dynamic EDID emulation**: it can be enabled by selecting D1-D24 EDID memory. The attached monitor’s EDID is copied to the input; if a new monitor is attached to the output, the emulated EDID changes automatically.

See more information about the settings in the EDID Management Menu section in the LDC software.

5.7. Software Control Modes

User has more possibilities to control the device besides the front panel buttons. The following list contains the software control modes:

- **Built-in website / Lightware Device Controller (LDC)**: you can connect to the device via our control software with using USB, RS-232 or Ethernet interfaces and control or configure the device as you wish. For the details, see the Software Control - Lightware Device Controller chapter.
- **LW3 protocol commands**: you can configure the device by using the full-range command set of LW3 protocol. For more details, see the LW3 Programmers’ Reference chapter.
6 Software Control - Built-in Website

The built-in website of the Matrix Management Unit allows to connect to and control the matrix via a web browser. The range of the controlling features are the same as in the case of Software Control - Lightware Device Controller.

- Establishing the Connection
- The Layout of the Built-in Web
6. Software Control - Built-in Website

System Requirements
- Web Browser: Mozilla Firefox, Google Chrome, Apple Safari.

ATTENTION! The EDID export function works only in Windows and macOS operating systems under Mozilla Firefox or Google Chrome web browsers.

6.1. Establishing the Connection

ATTENTION! Please make sure that the computer is in the same network as the matrix switcher. If the computer has multiple Ethernet connections (for example Wi-Fi and LAN connections are used simultaneously), you will need to know the IP address for the one that is used for controlling the system.

Step 1.
Connect the matrix and the computer either via
- Ethernet, with LAN patch cable, or
- Ethernet, with LAN cross cable.

Step 2.
Change to the desired IP settings if needed.

Step 3.
Type the IP address to the address bar of the web browser and press enter (the factory default network setting is the DHCP (dynamic IP address).

6.2. The Layout of the Built-in Web

The built-in web page allows the same controlling functions that are available via the Lightware Device Controller. Select a menu item on the left side; the default screen is the Crosspoint menu.

ATTENTION! Please enable the pop-up windows in your browser; certain contents are only displayed in a new window.

Built-in website of the MX2M-FR24R matrix switcher
The device can be controlled by a computer through the Ethernet interface with the Lightware Device Controller (LDC). The software can be installed on a Windows PC or macOS. The application and the User's Manual can be downloaded from www.lightware.com.

- **PRESETS**
- **EDID MANAGEMENT MENU**
- **SETTINGS MENU**
- **TERMINAL WINDOW**
- **HEALTH MENU**
7. Software Control - Lightware Device Controller

7.1. Install and Update

INFO: After the installation, the Windows and the macOS applications have the same look and functionality.

Minimum System Requirement

RAM: 1 GB
Minimum display resolution: 1280x720

Installation for Windows OS

Run the installer. If the User Account Control drops a pop-up message, click Yes.

During the installation you will be prompted to select the type of the installation: normal and the snapshot install:

<table>
<thead>
<tr>
<th>Normal install</th>
<th>Snapshot install</th>
</tr>
</thead>
<tbody>
<tr>
<td>Available for Windows and macOS</td>
<td>Available for Windows</td>
</tr>
<tr>
<td>The installer can update only this instance</td>
<td>Cannot be updated</td>
</tr>
<tr>
<td>Only one updateable instance can exist for all users</td>
<td>More than one different version can be installed for all users</td>
</tr>
</tbody>
</table>

Comparison of installation types

ATTENTION! Using the Normal install as the default choice is highly recommended.

Installation for macOS

Mount the DMG file by double clicking on it, and drag the LDC icon over the Applications icon to copy the program into the Applications folder. If you want to copy the LDC into another location, just drag the icon over the desired folder.

Updating of LDC

Step 1. Run the application.

The Device Discovery window appears automatically, and the program checks the available updates on Lightware's website and opens the update window if the LDC found updates.

The current and the update version number can be seen at the top of the window and they are shown in this window even with the snapshot install.

The Update window can also be opened by clicking on the About icon and the Update button.

Step 2. Set the desired update setting in the Options section.

- If you do not want to check for the updates automatically, uncheck the circle that contains the green tick.
- If you want to postpone the update, a reminder can be set with different delays from the drop down list.
- If the proxy settings traverse the update process, set the proper values, then click on the OK button.

Step 3. Click on the Download update button to start the update.

The updates can be checked manually by clicking on the Check now button.

7.2. Running the LDC

The common way to start the software is to double-click on the LDC icon. But the LDC can be run by command line parameters as follows.

ATTENTION! Please check the firewall settings on the macOS device. LDC needs to be added to the exceptions of the blocked softwares for the proper operation.

Connecting to a Device with Static IP Address

Format: LightwareDeviceController -i <IP_address>:<port>
Example: LightwareDeviceController -i 192.168.0.20:6107

The LDC is connected to a device with the indicated static IP address directly, the Device Discovery window is not displayed. When the port number is not set, the default port is used: 10001 (LW2 protocol). For LW3, devices use the 6107 port number.

Run window in Windows OS

7.3. Establishing Connection

Step 1. Connect the device to a computer via the following methods:

- Ethernet
- RS-232
- USB

Changing IP Address

To modify IP address settings quickly, it is not necessary to enter the device's settings/network menu, you can set them by clicking on the pencil icon next to the IP address. #network #ipaddress #dhcp
You can see the new settings only in this window.
Step 2. Run the controller software; the device discovery window appears automatically.

![Device discovery window in LDC](image)

**Step 3.** Select the MX2M-FR24R device from the discovered Ethernet devices or Serial devices; when the device is connected through RS-232, click on the Query button next to the desired serial port to display the name of the device and the serial number. Double click on the device name or select the device, and click on the green **Connect** button.

**Favorite Devices (fix IP)**

By clicking on the grey star icon beside the discovered devices, the most used units can be saved to the Favorite devices.

**ATTENTION!** Only devices with static (fix) IP address can be saved as a favorite device.

Once the device is set as favorite, the star icon will be highlighted with yellow and the device will be displayed in the Favorite Devices (fix IP) window section.

![Favorite Devices window section](image)
7.4. Crosspoint Menu

7.4.1. Video Layer

Legend of the Crosspoint Menu

<table>
<thead>
<tr>
<th><strong>1</strong></th>
<th>Device Discovery</th>
<th>Clicking on the button results in returning to the Device Discovery window. The connection with the current device will be terminated.</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

INFO: See the details about the port and crosspoint tiles in the Legend of the Port Tiles section.

INFO: See more details about video input/output port numbering in the Video Input/Output Port Numbering section.
7.4.2. Audio Layer

The operation of the Audio layer is basically the same as the Video Layer. Clicking on the source or the destination port the properties panel opens on the right side - all audio related information and options are available here. See the details about the available settings in the Audio Port Properties Windows section.

INFO:
- See the details about the port, and crosspoint tiles in the Legend of the Port Tiles section.
- See more details about audio input/output port numbering in the Audio Input Port Numbering and the Audio Output Port Numbering sections.

Dante / AES67 Crosspoint Settings

ATTENTION! Please note that the Dante/AES67 crosspoint operations in the LDC application affects the signal routing within the matrix switcher only. For external Dante/AES67 sources and destinations, please use the Dante Controller application. See the details in the Dante® Audio Interface section.

7.4.3. Legend of the Port Tiles

This section helps to easily identify the various types of port and crosspoint tiles on the Crosspoint menu.

### Video Layer

<table>
<thead>

7.5. Video Port Properties Windows

7.5.1. HDMI / OPTJ Input Port Properties

DIFFERENCE: The following panel is available only when a MX2M-4HDMI20-IB, MX2M-4HDMI20-IB-E, MX2M-4OPTJ-IB or MX2M-4OPTJ-IB-E board is installed in the matrix frame.

Clicking on a HDMI or OPTJ input port icon opens the Port properties panel. The most important signal information and settings are available from the panel.

Port Tab

Available Settings and Tools

- Port naming
- Mute/Unmute switcher
- Lock/Unlock switcher
- Switch to all button: clicking on the button switches the selected input stream to all output ports.
- Frame Detector - The tool displays the frame information of the input stream coming from the input port.
- Maximum supported HDCP (HDCP disabled / HDCP 1.4 / HDCP 2.2);
- HDP (Hot Plug Detect) enable button (AUTO / ON / OFF);
- Video stream information;
- Embedded audio information;
- Restore Factory Default Settings button.

Board Tab

The most important information about the I/O board is available on the tab like the type of the board and the status of board.

7.5.2. DisplayPort Input Port Properties

DIFFERENCE: The following panel is available only when a MX2M-DH-4DP12-IB or MX2M-DH-4DP12-IB-E board is installed in the matrix frame.

Clicking on a DP input port icon opens the Port properties panel. The most important signal information and settings are available from the panel.

Port Tab

Available Settings and Tools

- Port naming
- Mute/Unmute switcher
- Lock/Unlock switcher
- Switch to all button: clicking on the button switches the selected input stream to all output ports.
- Frame Detector - The tool displays the frame information of the input stream coming from the input port.
- Provide DP power (Enable / Disable): if enabled, the board sends 1.5W power on the chosen port.
- HDCP enable (Disable / Allow 1.4 only / Allow 2.2 & 1.4 / High value mode);
- Link datarate (Max RBR 1.62 Gbps / Max HBR 2.7 Gbps / Max HBR2 5.4 Gbps);
- Link lane count (Max 1 lanes / Max 2 lanes / Max 4 lanes);
- Conversion mode (Passthrough / RGB 4:4:4 to YCbCr 4:2:2 12 bit / RGB 4:4:4 to YCbCr 4:2:0 8 bit);
- Restart link training button;
- Video stream information;
- Embedded audio information;
- Restore Factory Default Settings button.

Board Tab

The most important information about the I/O board is available on the tab like the type of the board and the status of board.
7.5.3. HDMI / OPTJ Output Port Properties

DIFFERENCE: The following panel is available only when a MX2M-4HDMI20-OB, MX2M-4HDMI20-OB-E, MX2M-4OPTJ-OB or MX2M-4OPTJ-OB-E board is installed in the matrix frame.

Clicking on a HDMI or OPTJ output port icon opens the Port properties panel.

Port Tab
Available Settings and Tools
- Port naming
- Mute/Unmute switcher
- Lock/Unlock switcher
- Frame Detector - The tool displays the frame information of the input stream coming from the input port.
- HDCP: Depends on input: the level and version of HDCP-encryption depends on the source device; Maximum possible: the output ports set the maximum HDCP-encryption level that the connected sink device can accept.
- 5V enable switcher (on / off / auto)
- Conversion mode (Passthrough / YCbCr 4:2:2)
- Video stream information;
- Audio source:
  - HDMI: the original embedded audio is transmitted with the stream. When the crosspoint connection is changed on the Video layer, the embedded audio will be changed as well.
  - Audio layer: the audio signal is selected from the Audio layer. *
  - OFF: audio signal is disabled.
- Mapping channels for Audio layer to the output: the embedded audio signal can be 2-channel LPCM or compressed (non-HBR) audio signal only. There are two possibilities in case of audio signal embedding:
  - If the selected signal includes more than two audio channels, the user can select the two channels that are to be transmitted.
  - If the selected signal is compressed (non-HBR) audio, it can be embedded into the video stream without any further action.
- Restore Factory Default Settings button.

* Audio layer option is unavailable in case of MX2M-OB-E series boards.

Board Tab
The most important information about the I/O board is available on the tab like the type of the board and the status of board.

7.5.4. Frame Detector
The ports can show detailed information about the signal like blanking intervals and active video resolution. This feature can be used for troubleshooting if compatibility problems occur during system installation. To access this function, open the port properties window and click on the Frame detector button.

Frame detector window
Lightware's Frame Detector function works like a signal analyzer and allows to determine the exact video format that is present on the port, thus it helps to identify various problems. E.g. actual timing parameters may differ from the expected and this may cause some displays to drop the picture.

Frame Detector measures detailed timings of the video signals just like a built-in oscilloscope, but it is much easier to use. Actual display area shows the active video size (dark grey). Black area of the full frame is the blanking interval, which can contain the info frames and embedded audio data for HDMI signals. Shown values are measured on the actual signal and not retrieved only from the HDMI info frames.
7.5.5. CEC Controller

DIFFERENCE: The following panel is available only when a MX2M-4HDMI20-IB, MX2M-4HDMI20-IB-E, MX2M-4OPTJ-IB, MX2M-4OPTJ-IB-E, MX2M-4HDMI20-OB, MX2M-4HDMI20-OB-E, MX2M-4OPTJ-OB or MX2M-4OPTJ-OB-E board is installed in the matrix frame.

The MX2M-4HDMI20 and MX2M-4OPTJ series I/O boards are able to send and receive Consumer Electronics Control (CEC) commands. This feature is for remote control of the source or sink device. CEC is a bi-directional communication via HDMI cable.

ATTENTION! It can occur that the third-party device can receive, but not execute the command because it is not supported by the product. Check the accepted commands in the documentation of the device.

INFO: The first 2x2 bytes of the CEC commands contain identification data of the source and destination address. When the port is input, it is always 04 (from TV to Playback device 1); when the port is output, it is always 40 (from Playback device 1 to TV).

The CEC panel is available on the port properties window of the HDMI input, HDMI output, OPTJ input and OPTJ output ports.

This list contains the basic CEC commands, most of them are displayed on the graphical interface, too (on the left side). Click on the Send button to send the command.

The text field is for sending hexadecimal commands to the source. The maximum length of the message could be 30 characters (15 bytes). Click on the Send button to send the command.

A max. 14-character-long text can be shown on the sink device. The send OSD (On-screen display) command textbox is the input field of the string. Alphanumeric characters, glyphs and space are accepted. Click on the Send button to execute the command.

Displays all the sent (in red) CEC commands and the received answers (in blue) with a timestamp.

Legend of the received message:

- `<10:33:17> ACK` Answer for the acknowledged command.
- `<10:35:01> NACK` Answer for the not acknowledged command.
- `<10:33:17> IN PROGRESS` The command is in progress at the moment.
- `<10:33:17> FAILED` Answer for other failure.
- `<10:35:40> feature_abort_<*>` This is the most common answer from the third-party devices when the command is delivered, but the execution is refused. The cause of the refusal stands after 'feature_abort' expression.

Click on the Clear button to erase the content of the terminal window.

This panel provides quick and easy management of CEC commands. These buttons are pre-programmed with basic functions and send commands towards the sink. The communication is displayed in the Received Command box. For the list of the commands, see Sending a CEC Command in Hexadecimal Format section. Both the layout and functionality are similar to the design of a remote control.

ATTENTION! Make sure that the controlled unit is CEC-capable and this function is enabled.
7.6. Audio Port Properties Windows

7.6.1. Digital Audio Input Port Properties

DIFFERENCE: The following panel is available only when a MX2M-4HDMI20-IB, MX2M-4HDMI20-IB-E, MX2M-4OPTJ-IB, MX2M-4OPTJ-IB-E, MX2M-DH-4DP12-IB or MX2M-DH-4DP12-IB-E board is installed in the matrix frame.

Clicking on a digital audio input port icon opens the Port properties panel. The most important signal information and settings are available from the panel.

Port Tab
Available Settings and Tools:
- Port naming
- Mute/Unmute switcher
- Lock/Unlock switcher
- Switch to all button: clicking on the button switches the selected input stream to all output ports.
- Audio signal related information;
- Restore Factory Default Settings button.

Board Tab
The most important information about the I/O board is available on the tab like the type of the board and the status of board.

7.6.2. Digital Audio Output Port Properties

DIFFERENCE: The following panel is available only when a MX2M-4HDMI20-OB, MX2M-4HDMI20-OB-E, MX2M-4OPTJ-OB or MX2M-4OPTJ-OB-E board is installed in the matrix frame.

Clicking on a HDMI or OPTJ output port icon opens the Port properties panel. The most important signal information and settings are available from the panel.

Port Tab
Available Settings and Tools:
- Port naming
- Mute/Unmute switcher
- Lock/Unlock switcher
- Audio source:
  - HDMI: the original embedded audio is transmitted with the stream. When the crosspoint connection is changed on the Video layer, the embedded audio will be changed as well.
  - Audio layer: the audio signal is selected from the Audio layer.
  - OFF: audio signal is disabled.
- Mapping channels for Audio layer to the output: the embedded audio signal can be 2-channel LPCM or compressed (non-HBR) audio signal only. There are two possibilities in case of audio signal embedding:
  - If the selected signal is of type LPCM, the user can select the two channels that are to be transmitted.
  - If the selected signal is compressed (non-HBR) audio, it can be embedded into the video stream without any further action.
- Restore Factory Default Settings button.

* Audio layer option is unavailable in case of MX2M-OB-E series boards.

Board Tab
The most important information about the I/O board is available on the tab like the type of the board and the status of board.
7.6.3. Analog Audio Input Port Properties

DIFFERENCE: The following panel is available only when a **MX2M-AUX-8AUDIO** board is installed in the matrix frame.

Clicking on an analog audio input port icon opens the Port properties panel. The most important signal information and settings are available from the panel.

**Port Tab**

Available Settings and Tools

- Port naming
- Mute/Unmute switcher
- Lock/Unlock switcher
- Switch to all button: clicking on the button switches the selected input stream to all output ports.
- Input gain: sets the gain between -12 dB and 21 dB. Clicking on the -12 dB icon results in -12 dB, the +12 dB icon results in +1 dB in the gain setting. The default value is 0 dB.
- Input volume: sets the input volume (attenuation) between 0% (-95.625 dB) and 100% (0 dB). Clicking on the -1% icon results in -1%, the +1% icon results in +1% in the volume setting. The default value is 100%.
- Input balance: sets the balance between -100 (total left) and 100 (total right). Clicking on the -1 icon results in -1, the +1 icon results in +1 in the balance setting. The default value is 0 (center).
- Restore Factory Default Settings button.

**Board Tab**

The most important information about the I/O board is available on the tab like the type of the board and the status of board.

7.6.4. Analog Audio Output Port Properties

DIFFERENCE: The following panel is available only when a **MX2M-AUX-8AUDIO** board is installed in the matrix frame.

Clicking on an analog audio output port icon opens the Port properties panel. The most important signal information and settings are available from the panel.

**Port Tab**

Available Settings and Tools

- Port naming
- Mute/Unmute switcher
- Lock/Unlock switcher
- Output volume: sets the volume (attenuation) between 0% (-95.625 dB) and 100% (0 dB). Clicking on the -1% icon results in -1%, the +1% icon results in +1% in the volume setting. The default value is 100%.
- Output balance: sets the balance between -100 (total left) and 100 (total right). Clicking on the -1 icon results in -1, the +1 icon results in +1 in the balance setting. The default value is 0 (center).
- Mapping channels for Audio layer to the output: analog audio output port can convert only LPCM signals, therefore the only option available is the following: if the selected signal is of type LPCM, the user can select the two channels to be transmitted.
- Restore Factory Default Settings button.

**Board Tab**

The most important information about the I/O board is available on the tab like the type of the board and the status of board.
7. Software Control - Lightware Device Controller

Hybrid Modular Matrix Switcher series – User’s Manual

60

7.6.5. Dante® Audio Input Port Properties

DIFFERENCE: The following panel is available only when a MX2M-AUX-DANTE-32CH board is installed in the matrix frame.

Clicking on a Dante audio input port icon opens the Port properties panel. The most important signal information and settings are available from the panel. #audio #dante #aes67

Port Tab
Available Settings and Tools

- Port naming
- Adding Channel label for receive channel 1 and 2
- Mute/Unmute switcher #mute #unmute
- Lock/Unlock switcher #lock #unlock
- Switch to all button: clicking on the button switches the selected input stream to all output ports. #switch
- Restore Factory Default Settings button.

Board Tab
- Device naming
- IP address mode for Primary and Secondary interfaces: Unknown/Query / LinkLocal / DHCP or LinkLocal / DHCP / Static
- TX channel naming: from TX channel 1 to 16.
- RX channel naming: from RX channel 1 to 16.
- Restore Factory Default Settings button.

7.6.6. Dante® Audio Output Port Properties

DIFFERENCE: The following panel is available only when a MX2M-AUX-DANTE-32CH board is installed in the matrix frame.

Clicking on a Dante audio output port icon opens the Port properties panel. The most important signal information and settings are available from the panel. #audio #dante #aes67

Port Tab
Available Settings and Tools

- Port naming
- Mute/Unmute switcher #mute #unmute
- Lock/Unlock switcher #lock #unlock
- Mapping channels for Audio layer to the output: the embedded audio signal can be 2-channel LPCM only. If the selected signal includes more than two audio channels, the user can select the two channels to be transmitted. #mapping #channelmapping
- “Use channel 1 for output left and channel 2 for output right if the above mapping produces no sound” switcher
- Restore Factory Default Settings button.

Board Tab
- Device naming
- IP address mode for Primary and Secondary interfaces: Unknown/Query / LinkLocal / DHCP or LinkLocal / DHCP / Static
- TX channel naming: from TX channel 1 to 16.
- RX channel naming: from RX channel 1 to 16.
- Restore Factory Default Settings button.
7.7. Presets

Select the Crosspoint / Presets menu to open the preset operations of the matrix. 

The router can store presets and the following are stored in each slot: input/output crosspoint state, muted/unmuted states. Preset loading has an effect on all ports, except the locked ones.

**ATTENTION!** When factory default settings are restored, presets are deleted.

**ATTENTION!** The Preset loading has an effect on all ports, except the locked ones.

---

**Loading a Preset**

1. Select the **Presets** tab from the **Crosspoint** menu.
2. Select the desired preset; check the **Preview** panel and press the **Load** button. Press **Yes** in the confirmation window.

**Auto load mode**

When the **Auto load** button is highlighted in green, the mode is active. In this case, confirmation is not required: the selected preset is loaded immediately when the button is pressed.

**Saving a Preset to an Empty Slot**

1. Arrange the desired crosspoint connections in **Tile view** or **Grid view**.
2. Select the **Presets** tab from the **Crosspoint** menu and type the desired **Preset name** in the indicated text field up to 16 characters. The following are allowed when naming: letters (A-Z and a-z), hyphen (-), underscore (_), and numbers (0-9).
3. Press the **Create New Preset** button to store the configuration.

**Overwriting an Existing Preset**

1. Arrange the desired crosspoint connections.
2. Select an existing preset, press the **Save** button and **Yes** to confirm.

**Renaming a Preset**

1. Select the desired preset you want to rename.
2. Type the desired name and press the **Rename Preset** button.

**Deleting a Preset**

1. Select the desired preset you want to delete.
2. Press the **Delete** button and **Yes** to confirm.
7. Software Control - Lightware Device Controller

7.8. EDID Management Menu

Advanced EDID Management can be accessed by selecting the EDID Management menu. There are two panels: the left one contains Source EDIDs, the right one contains Destination places where the EDIDs can be emulated or copied.

### EDID Operations

**Changing Emulated EDID**

1. Choose the desired EDID list on the source panel and select an EDID.
2. Press the Emulated button on the top of the Destination panel.
3. Select the desired port on the right panel (one or more ports can be selected); the EDID(s) will be highlighted with a yellow cursor.
4. Press the Transfer button to change the emulated EDID.

**Learning an EDID**

The process is the same as changing the emulated EDID; the only difference is the Destination panel: press the User button. Thus, one or more EDIDs can be copied into the user memory either from the factory memory or from a connected sink (Dynamic).

**Exporting an EDID**

Source EDID can be downloaded as a file (*.bin, *.dat or *.edid) to the computer.

1. Select the desired EDID from the Source panel (line will be highlighted in yellow).
2. Press the Export button to open the dialog box and save the file to the computer.

**Importing an EDID**

Previously saved EDID (*.bin, *.dat or *.edid file) can be uploaded to the user memory:

1. Press the User button on the top of the Source panel and select a memory slot.
2. Press the Import button below the Source panel.
3. Browse the file in the opening window, then press the Open button. The browsed EDID is imported into the selected User memory.

**Deleting EDID(s)**

The EDID(s) from User memory can be deleted as follows:

1. Press the User button on the top of the Destination panel.
2. Select the desired memory slot(s); one or more can be selected (“Select All” and “Select None” buttons can be used). The EDID(s) will be highlighted in yellow.
3. Press the Delete selected button to delete the EDID(s).

### ATTENTION!

The imported EDID overwrites the selected memory place even if it is not empty.
7.8.2. Editing an EDID

Select an EDID from the Source panel and press the Edit button to display the Advanced EDID Editor window. The editor can read and write all descriptors that are defined in the standards, including the additional CEA extensions. Any EDID from the device's memory or a saved EDID file can be loaded into the editor. The software resolves the raw EDID and displays it as readable information to the user. All descriptors can be edited, saved in an EDID file, or uploaded to the User memory.

![EDID Editor window](image)

7.8.3. Creating an EDID - Easy EDID Creator

Since the Advanced EDID Editor mentioned above needs more detailed knowledge about EDID, Lightware introduced a wizard-like interface for fast and easy EDID creation. With Easy EDID Creator, it is possible to create custom EDIDs in four simple steps. By clicking on the Create button below the Source panel, Easy EDID Creator is opened in a new window.

![EDID Creator window](image)
7.8.4. EDID Summary Window

Select an EDID from the Source panel and press the Info button to display the EDID summary.

![EDID Summary Window]

7.8.5. DisplayID Extension

The DisplayID is defined by a VESA standard created beside the EDID structure. The Advanced EDID editor gets a DisplayID section, where additional metadata is stored for the video sources about the display capabilities.

INFO: EDID has only 11 bits for active resolution dimensions, it means that the maximum pixel number is 4095.

DisplayID extension supports high resolution displays and tile mode. This interface provides easy and user-friendly input of the Display ID information. #displayid
7.9. Settings Menu

7.9.1. Overview

The most important hardware and software related information can be found on this tab: hardware and firmware version, serial numbers, endpoint statistics, temperatures, operation time, and voltage information. Device label can be changed to unique description.

Licenses

MX2M-FR24R matrix switcher can be purchased with no PSU redundancy. In this case only one PSU drawer is installed with a power supply unit (Power Drawer 1, Primary), and the Single PSU License is installed on the matrix, which results in the Power Drawer 2 being unable to accept the second PSU drawer. Customers have the possibility of purchasing a code that makes the Single PSU License inactive. For more details, please contact sales@lightware.com.

7.9.2. Network

Static IP address and DHCP (dynamic IP address) settings can be set on this tab. Always press the Apply settings button to save changes.

Factory default settings of the matrix can be recalled with a dedicated button. See the factory default values in the Factory Default Settings section.
### 7.9.3. System Log

#### Settings menu - System Log tab

All matrix related notifications are listed in the System log tab, which are grouped into four categories: info, notice, warning, and error. The categories are summarized on the right side of the tab in the Summary section. The list can be customized with the Column Switchers by turning the following columns on or off: Time, Level, Identification, and Message.

All system log tracks can be saved to the control computer with the Export full system log button.

**INFO:** Please always download the system logs and send them to the Lightware Support Team ([support@lightware.com](mailto:support@lightware.com)) for the most effective collaboration in case of a troubleshooting issue.

---

### 7.9.4. System

#### Settings menu - System tab

The following functions are available under the System tab:

- **Date / time settings** - system time can be set manually or can be synchronized with your control device.

- **Save and restore system settings**
  - Save system settings - clicking on the Save button saves the actual configuration of the matrix to a file.
  - Restore - select a backup file of the matrix on your computer and select the Restore button to load it. The configuration settings saved in the file are applied immediately.

- **Load factory defaults** - recalling factory default settings and values for the matrix. All factory default settings are listed in the Factory Default Settings section.

- **Reboot device** - the matrix switcher reboots, it is the same as disconnecting the power source and reconnecting it again.
7.10. Terminal Window

Select the Settings / Terminal menu to open the Terminal window.

1. **LW3 protocol help**
   - Pushing the button opens a help window that describes the most important information about LW3 protocol commands in HTML format.

2. **Edit mode**
   - The default appearance is the read-only mode. If you want to modify the values or parameters, tick the option. You will be prompted to confirm your selection.

3. **Warning mode**
   - If this box checked in, a warning window pops up when you enable Edit mode.

4. **Node list**
   - Correspondent parameters and nodes are shown that are connected to the selected item in the protocol tree.

   - **Manual** button: Manual (short description) of the node can be called and displayed in the terminal window.
   - **Set** button: Saves the value/parameter typed in the textbox.
   - **Call** button: Calls the method, e.g. reloads factory default settings.

5. **Protocol tree**
   - LW3 protocol tree; select an item to see its content.

6. **Command line**
   - Type the desired command and execute it with the **Send** button. Clear all current commands and responses in the Terminal window by the **Clear** button.

7. **Terminal window**
   - Commands and responses with time and date are listed in this window. Sent commands start with '>' character, received responses start with '<' character. The color of each item depends on the type of the command and response. The content of the window can be emptied by the **Clear** button. If the **Autoscroll** option is ticked, the list is scrolled automatically when a new line is added.

7.11. Health Menu

7.11.1. Overview

All general information about the matrix frame and the installed I/O boards is available in the Overview tab of the Health menu. The firmware package version, error or warning messages, the list of installed I/O boards grouped by types and the serial and part numbers can be seen on this tab.

The **Overall Health** indicator shows whether there is any warning or error message in the system:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>✅</td>
<td>OK</td>
<td>No active warning or error level log entry exists for the system or a device seated in the system.</td>
</tr>
<tr>
<td>⚠️</td>
<td>Warning</td>
<td>Active warning level log entry exists and no active error level log entry exists for the system or a device seated in the system.</td>
</tr>
<tr>
<td>⚠️</td>
<td>Error</td>
<td>Active error level log entry exists for the system or a device seated in the system.</td>
</tr>
</tbody>
</table>
7.11.2. Frame

The most important information about the matrix frame is available on the Frame tab. The firmware package version, AC power line redundancy, frame voltages, frame temperatures and the fan speeds can be checked.

7.11.3. Aux Slots

The most important information about the auxiliary boards grouped by the board slots is available on the Aux Slots tab. The type of the installed I/O board, the status of the board, the temperature and voltage information can be checked on the tab.

INFO: See the details about the location of the AUX board slots in the Layout of the Input/Output Board Slots and Power Drawer Slots section.
7.11.4. Input Slots

Health menu - Input Slots tab

The most important information about the input boards grouped by the board slots is available on the Input Slots tab. The type of the installed I/O board, the status of the board, the temperature and voltage information can be checked on the tab.

INFO: See the details about the location of the input board slots in the Layout of the Input/Output Board Slots and Power Drawer Slots section.

7.11.5. Output Slots

Health menu - Output Slots tab

The most important information about the output boards grouped by the board slots is available on the Output Slots tab. The type of the installed I/O board, the status of the board, the temperature and voltage information can be checked on the tab.

INFO: See the details about the location of the output board slots in the Layout of the Input/Output Board Slots and Power Drawer Slots section.
7.11.6. PSU Drawer Slots

The most important information about the PSU drawers grouped by the power drawer slots is available on the PSU Drawer Slots tab. The temperature, current, voltage and fan speed information can be checked on the tab.

INFO: See the details about the numbering of the PSU drawer slots in the Layout of the Input/Output Board Slots and Power Drawer Slots section.

7.11.7. Failing Devices

The most important status information about the matrix frame and the installed I/O boards is available on the Failing Devices tab.

**Overall Health Info about the I/O Board Slots**

The indicators show whether there is any warning or error message is in the system:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>✔</td>
<td>OK</td>
<td>No active warning or error level log entry exists for the system or a device seated in the system.</td>
</tr>
<tr>
<td>⚠</td>
<td>Warning</td>
<td>Active warning level log entry exists and no active error level log entry exists for the system or a device seated in the system.</td>
</tr>
<tr>
<td>⚡</td>
<td>Error</td>
<td>Active error level log entry exists for the system or a device seated in the system.</td>
</tr>
</tbody>
</table>

**Matrix Drawing**

The drawing of the matrix shows the recent installation of the matrix frame, including the I/O boards with the slots where they are installed.
LW3 Programmers’ Reference

The device can be controlled through Lightware 3 (LW3) protocol commands to ensure compatibility with other Lightware products. The supported LW3 commands are described in this chapter.

- LW3 Protocol Commands - Quick Summary
8.1. Overview
The Lightware Protocol #3 (LW3) is implemented in almost all new Lightware devices (matrix switchers, signal extenders and distribution amplifiers) since 2012. The protocol is ASCII-based and all commands are terminated with a carriage return (Cr, ‘\r’) and line feed (Lf, ‘\n’) pair. It is organized as a tree structure that provides outstanding flexibility and user-friendly handling with ’nodes’, ’properties’ and ’methods’. The Advanced View of the Lightware Device Controller software is the perfect tool for browsing and learning how the LW3 protocol can be used in practice.

8.2. Instructions for the Terminal Application Usage
Terminal Application
The LW3 protocol commands can be applied to the receiver using a terminal application. You need to install one of them on your control device, for example Putty or CLI.

Establishing Connection
Follow the steps for establishing connection to the receiver:
Step 1. Connect the receiver to a LAN over Ethernet (see the details in the Connecting Steps section).
Step 2. Open the terminal application (e.g. Putty).
Step 3. Add the IP address of the device (the default IP setting is the DHCP (dynamic IP address)) and the port number (6107).
Step 4. Select the Raw connection type, and open the connection.

Once the terminal window is opened, you can enter the LW3 protocol commands, which are listed in the following sections.

8.3. Protocol Rules
8.3.1. LW3 Tree Structure and Command Structure (examples)

8.3.2. General Rules
- All names and parameters are case-sensitive.
- The nodes are separated by a slash ('/') character.
- The node name can contain the elements of the English alphabet and numbers.
- Use the TCP port no. 6107 when using LW3 protocol over Ethernet.
- When a command is issued by the device, the received response cannot be processed by the CPU.
- The node paths describe the exact location of the node, listing each parent node up to the root.
8.3.3. Command Types

GET command

The GET command can be used to get the child nodes, properties and methods of a specific node. It can also be used to get the value of a property. Use the dot character (.) when addressing a property:

- GET /SerialNumber
- pr /SerialNumber=87654321

GETALL command

The GETALL command can be used to get all child nodes, properties and methods of a node with one command.

- GETALL /MEDIA/XP
- n-/MEDIA/XP/VIDEO
- n-/MEDIA/XP/AUDIO
- m-/MEDIA/XP/MultiLayer_Connect
- m-/MEDIA/XP/MultiLayer_Switch
- m-/MEDIA/XP/MultiLayer_SwitchAll
- m-/MEDIA/XP/MultiLayer_SwitchMulti

SET command

The SET command can be used to modify the value of a property. Use the dot character (.) when addressing the property:

- SET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.HdcpVersion=2
- pw /MEDIA/PORTS/VIDEO/I1/PARAMETERS.HdcpVersion=2

CALL command

A method can be invoked by the CALL command. Use the colon character (:) when addressing the method:

- CALL /EDID:switchAll(F147)
- mO /EDID:switchAll

MAN command

The manual is a human readable text that describes the syntax and provides a hint on how to use the primitives. For every node, property and method in the tree there is a manual; type the MAN command to get the manual:

- MAN /MEDIA/PORTS/VIDEO/O1/PARAMETERS.AudioSource
- pm /MEDIA/PORTS/VIDEO/O1/PARAMETERS.AudioSource ["Hdmi" | "AudioLayer" | "Off"] Sets the source of the embedded audio stream

8.3.4. Prefix Summary

**DEFINITION:** The prefix is a 2-character-long code that describes the type of the response.

The following prefixes are defined in the LW3 protocol:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>n-</td>
<td>a node</td>
</tr>
<tr>
<td>nE</td>
<td>an error for a node</td>
</tr>
<tr>
<td>nm</td>
<td>a manual for a node</td>
</tr>
<tr>
<td>pr</td>
<td>a read-only property</td>
</tr>
<tr>
<td>pw</td>
<td>read-write property</td>
</tr>
<tr>
<td>pE</td>
<td>an error for the property</td>
</tr>
<tr>
<td>pm</td>
<td>a manual for the property</td>
</tr>
<tr>
<td>m-</td>
<td>a method</td>
</tr>
<tr>
<td>mO</td>
<td>a response after a successful method execution</td>
</tr>
<tr>
<td>mF</td>
<td>a response after a failed method execution</td>
</tr>
<tr>
<td>mE</td>
<td>an error for a method</td>
</tr>
<tr>
<td>mm</td>
<td>a manual for a method</td>
</tr>
</tbody>
</table>

8.3.5. Error Messages

There are several error messages defined in the LW3 protocol, all of them have a unique error number.

- CALL /MEDIA/XP/VIDEO:lockSource(IA)
- mE /MEDIA/XP/VIDEO:lockSource %E006: Illegal operation

8.3.6. Escaping

**DEFINITION:** An escape sequence is a sequence of characters that does not represent itself when used inside a character or string literal, but is translated into another character or a sequence of characters.

Property values and method parameters can contain characters that are used as control characters in the protocol. They must be escaped. The escape character is the backslash (\), and escaping means injecting a backslash before the character that should be escaped (like in C language).

Control characters are the following: \() \# \% ( ) \r \n \t
8.3.7. Signature

**DEFINITION:** The signature is a four-digit-long hexadecimal value that can be optionally placed before every command to keep a command and the corresponding responses together as a group.

Each line is terminated with carriage return (Cr, ‘\r’) and line feed (Lf, ‘\n’) characters. In several cases the number of the lines in the response cannot be determined in advance, e.g. the client intends to receive the whole response and also wants to be sure that the received lines belong together and to the same command. In these cases, a special feature, the ‘signature’ can be used. The response to that particular command will also be preceded by the signature, and the corresponding lines will be between brackets:

```
1700#GE T /EDID.*
æ
pr/EDID.EdidStatus=F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;F149;
æ pr /EDID Features=DisplayID;
æ m /EDID:copy
æ m /EDID:delete
æ m /EDID:reset
æ m /EDID:switch
æ m /EDID:switchAll
```

**INFO:** The lines of the signature are also Cr and Lf terminated.

8.3.8. Subscription

**DEFINITION:** Subscription to a node means that the user will get a notification if a property of the node changes. A user can subscribe to any node. These notifications are asynchronous messages and are useful to keep the client application up to date, without having to periodically poll the node to detect a changed property. When the user does not want to be informed about the changes anymore, he can simply unsubscribe from the node.

**ATTENTION!** The subscriptions are handled separately for connections. Hence, if the connection is terminated, all registered subscriptions are deleted. After reopening a connection all subscribe commands have to be sent in order to get the notifications of the changes on that connection.

**Subscribe to a Node**

- OPEN /MEDIA/XP/VIDEO
- o- /MEDIA/XP/VIDEO

**Get the Active Subscriptions**

- OPEN
- o- /MEDIA/XP/VIDEO
- o- /EDID
- o- /HEALTH

**Subscribe to Multiple Nodes**

- OPEN /MEDIA/XP/VIDEO/*
- o- /MEDIA/XP/VIDEO/*

**Unsubscribe from a Node**

- CLOSE /MEDIA/XP/VIDEO
- c- /MEDIA/XP/VIDEO

**Unsubscribe from Multiple Nodes**

- CLOSE /MEDIA/XP/VIDEO/*
- c- /MEDIA/XP/VIDEO/*

---

8.3.9. Notifications about the Changes of the Properties

When the value of a property is changed and the user is subscribed to the node that the property belongs to, an asynchronous notification is generated. This notification is called the ‘change message’. The format of such a message is very similar to the response for the GET command:

```
CHG /SYS/UPDATE.NumberOfBoardsSeated=6
```

**A Short Example of How to Use the Subscription**

There are two independent users controlling the device through two independent connections (Connection #1 and Connection #2). The events in the rows occur after each other.

```
OPEN /MEDIA/PORTS/VIDEO/O1/PARAMETERS
æ o- /MEDIA/PORTS/VIDEO/O1/PARAMETERS
æ GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting
æ pw /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting=1
æ GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting
æ pw /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting=2
æ CHG /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting=2
```

**Explanation:** The first user (Connection #1) set a subscription to a node. Later the other user (Connection #2) made a change, and thanks to the subscription, the first user got a notification about the change.

8.3.10. Legend for the Control Commands

<table>
<thead>
<tr>
<th>Format</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;in&gt;</td>
<td>Input port number</td>
</tr>
<tr>
<td>&lt;out&gt;</td>
<td>Output port number</td>
</tr>
<tr>
<td>&lt;port&gt;</td>
<td>Input or output port number</td>
</tr>
<tr>
<td>&lt;loc&gt;</td>
<td>Location number</td>
</tr>
<tr>
<td>&lt;parameter&gt;</td>
<td>Variable, which is defined and described in the command</td>
</tr>
<tr>
<td>&lt;expression&gt;</td>
<td>Batched parameters: the underline means that more expressions or parameters can be placed by using a semicolon, e.g. O1;O2 or F27:U1;F147:U2</td>
</tr>
<tr>
<td>· Space character</td>
<td></td>
</tr>
</tbody>
</table>
8.4. System Commands

8.4.1. Querying the Product Name

The name of the product is a read-only parameter and cannot be modified.

Command and Response

```
GET / ProductName
pr / ProductName=<Product_name>
```

Example

```
GET / ProductName
pr / ProductName=MX2M-FR24R
```

8.4.2. Setting the Device Label

INFO: The device label can be changed to a custom text in the Overview tab of the LDC software. This writable parameter is not the same as the ProductName parameter.

Command and Response

```
SET / MANAGEMENT / LABEL / DeviceLabel=<Custom_name>
pw / MANAGEMENT / LABEL / DeviceLabel=<Custom_name>
```

The Device Label can be 39 characters long and ASCII characters are allowed. Longer names are truncated.

Example

```
SET / MANAGEMENT / LABEL / DeviceLabel=MX2M_Conference
pw / MANAGEMENT / LABEL / DeviceLabel=MX2M_Conference
```

8.4.3. Querying the Serial Number

Command and Response

```
GET / SerialNumber
pr / SerialNumber=<serial_number>
```

Example

```
GET / SerialNumber
pr / SerialNumber=87654321
```

8.4.4. Querying the Firmware Version

Command and Response

```
GET / MANAGEMENT / UID / PACKAGE .Version
pr / MANAGEMENT / UID / PACKAGE .Version=<firmware_version>
```

Example

```
GET / MANAGEMENT / UID / PACKAGE .Version
pr / MANAGEMENT / UID / PACKAGE .Version=1.0.0b20
```

8.4.5. Querying the Date and Time of the System

The query returns with the current date and time that is set in the matrix. The format is based on the ISO 8601 standard.

Command and Response

```
GET / MANAGEMENT / DATETIME .CurrentTime
pr / MANAGEMENT / DATETIME .CurrentTime=<date_time>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Formula</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;date_time&gt;</td>
<td>Current date and time</td>
<td>YYYY-MM-DDTHH:MM:SS</td>
</tr>
</tbody>
</table>

Example

```
GET / MANAGEMENT / DATETIME .CurrentTime
pr / MANAGEMENT / DATETIME .CurrentTime=2020-09-01T17:38:37
```

8.4.6. Setting the Date and Time Manually

The date and time format is based on the ISO 8601 standard.

Command and Response

```
CALL / MANAGEMENT / DATETIME .setTime=<date_time>
mo / MANAGEMENT / DATETIME .setTime=<date_time>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Formula</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;date_time&gt;</td>
<td>Current date and time</td>
<td>YYYY-MM-DDTHH:MM:SS</td>
</tr>
</tbody>
</table>

Example

```
CALL / MANAGEMENT / DATETIME .setTime=2020-12-24T20:00:15
mo / MANAGEMENT / DATETIME .setTime=
```
8.4.7. Setting the Brightness of the LCD Screen

Command and Response

- SET /SYS/CECU/LCD.Brightness=<parameter>
- pw /SYS/CECU/LCD.Brightness=<parameter>

Parameters
The <parameter> of display brightness can be set between values 0 and 10.

Example
- SET /SYS/CECU/LCD.Brightness=5
- pw /SYS/CECU/LCD.Brightness=5

8.4.8. Control Lock of the LCD Menu

Enable/disable the operation of the jog dial control knob and the LCD menu control.

Command and Response

- SET /SYS/CECU/LCD-ControlLock=<logical_value>
- pw /SYS/CECU/LCD-ControlLock=<logical_value>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;mode&gt;</td>
<td>Control lock mode</td>
<td>true</td>
<td>Enabled</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>Disabled</td>
</tr>
</tbody>
</table>

Example
- SET /SYS/CECU/LCD-ControlLock=true
- pw /SYS/CECU/LCD-ControlLock=true

8.4.9. Adding License

Command and Response

- CALL /MANAGEMENT/LICENSE:addLicense()
- mO /MANAGEMENT/LICENSE:addLicense=

Example
- CALL /MANAGEMENT/LICENSE:addLicense()
- mO /MANAGEMENT/LICENSE:addLicense=

8.4.10. Removing License

Command and Response

- CALL /MANAGEMENT/LICENSE:removeLicense()
- mO /MANAGEMENT/LICENSE:removeLicense=

Example
- CALL /MANAGEMENT/LICENSE:removeLicense()
- mO /MANAGEMENT/LICENSE:removeLicense=

8.4.11. Software Resetting the Device

The core application of the matrix can be restarted.

Command and Response

- CALL /SYS:softReset()
- mO /SYS:softReset=

Example
- CALL /SYS:softReset()
- mO /SYS:softReset=

8.4.12. Rebooting the Device

The matrix switcher can be restarted – the current connections and the AV signal transmission will be terminated.

Command and Response

- CALL /SYS:reset()
- mO /SYS:reset=

Example
- CALL /SYS:reset()
- mO /SYS:reset=
8.4.13. Restoring the Factory Default Settings

Command and Response #factory

- CALL /SYS:factoryDefaults()
- mo /SYS:factoryDefaults=

Example

- CALL /SYS:factoryDefaults()
- mo /SYS:factoryDefaults=

The device is restarted, current connections are terminated, and the default settings are restored. See the complete list in the Factory Default Settings section.

8.5. I/O Board Management

8.5.1. Querying the Status of a Board

The query returns the actual status of the selected I/O board in the matrix frame.

Command and Response

- GET /SYS/<board>.Status
- pr /SYS/<board>.Status=<status>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;board&gt;</td>
<td>The identifier of the board.</td>
<td>IB1...IB6</td>
<td>Input board ID, the values can be IB1, IB2, IB3, IB4, IB5 or IB6.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>OB1...OB6</td>
<td>Output board ID, the values can be OB1, OB2, OB3, OB4, OB5 or OB6.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>LS1...LS4</td>
<td>Auxiliary (LS - Low Speed) board ID, the values can be LS1, LS2, LS3, or LS4.</td>
</tr>
<tr>
<td>&lt;status&gt;</td>
<td>Current status of the I/O board</td>
<td>No power</td>
<td>Board is present but not powered.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Not present</td>
<td>Board is not present.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Seated</td>
<td>Board is seated into the slot.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Connecting</td>
<td>Connecting to the CPU.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Connected</td>
<td>Connected to the CPU but not initialized yet.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Initializing</td>
<td>Under initialization.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Operational</td>
<td>Board is operational and ready for use.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Reset</td>
<td>Board is rebooting.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Debug</td>
<td>Board is in debug mode.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>FirmwareUpgradeEthernet</td>
<td>The firmware of the board is being updated by the matrix frame.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>BootloadMode</td>
<td>Board is in bootload (firmware update) mode, which might happen after an unsuccessful firmware update procedure. Restarting the firmware update procedure is recommended.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>InWrongSlot</td>
<td>The board is seated to the wrong slot. See the layout of the I/O board slot in the Board Installation and Handling section.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Unknown</td>
<td>The status of board is unknown. Reseating of the board is recommended.</td>
</tr>
</tbody>
</table>
Example

GET /SYS/OB1.Status
pr /SYS/OB1.Status=Operational

8.5.2. Querying the Number of Seated I/O Boards
The query returns the number of the seated I/O boards in the matrix frame, including IB, OB, and AUX (Low Speed) boards.

Command and Response

GET /SYS/UPDATE.NumberOfBoards
pr /SYS/UPDATE.NumberOfBoards=<number>

Example
GET /SYS/UPDATE.NumberOfBoards
pr /SYS/UPDATE.NumberOfBoards=7

8.5.3. Querying the List of Seated I/O Boards
The query returns the list of the seated I/O boards in the matrix frame, including IB, OB, and AUX (Low Speed) boards.

Command and Response

GET /SYS/UPDATE.BoardsInSeatedState
pr /SYS/UPDATE.BoardsInSeatedState=<board_slot1>;<board_slot2>;...<board_slotX>

Example
GET /SYS/UPDATE.BoardsInSeatedState
pr /SYS/UPDATE.BoardsInSeatedState=LS1;LS2;IB2;IB4;OB1;OB2;OB3;OB4;OB5

8.5.4. Querying the List of Operational I/O Boards
The query returns the list of the operational I/O boards in the matrix frame, including IB, OB, and AUX (Low Speed) boards.

Command and Response

GET /SYS/UPDATE.BoardsInOperationalState
pr /SYS/UPDATE.BoardsInOperationalState=<board_slot1>;<board_slot2>;...<board_slotX>

Example
GET /SYS/UPDATE.BoardsInOperationalState
pr /SYS/UPDATE.BoardsInOperationalState=LS1;LS2;IB2;IB4;OB1;OB2;OB3;OB4;OB5

8.5.5. Querying the List of Failed I/O Boards
The query returns the list of the failed I/O boards in the matrix frame, including IB, OB, and AUX (Low Speed) boards.

Command and Response

GET /SYS/UPDATE.BoardsInErrorState
pr /SYS/UPDATE.BoardsInErrorState=<board_slot1>;<board_slot2>;...<board_slotX>

Example
GET /SYS/UPDATE.BoardsInErrorState
pr /SYS/UPDATE.BoardsInErrorState=LS1;LS2;IB2;IB4;OB1;OB2;OB3;OB4;OB5

8.5.6. Querying the Product Name of the I/O Board
The name of the product is a read-only parameter and cannot be modified.

Command and Response

GET /SYS/<board>.ProductName
pr /SYS/<board>.ProductName=<Product_name>

Example
GET /SYS/IB1.ProductName
pr /SYS/IB1.ProductName=MX2M-4HDMI20-IB

8.5.7. Querying the Serial Number of the I/O Board

Command and Response

GET /SYS/<board>.SerialNumber
pr /SYS/<board>.SerialNumber=<serial_number>

Example
GET /SYS/LS1.SerialNumber
pr /SYS/LS1.SerialNumber=87654321
8.5.8. Querying the Firmware Version of the I/O Board

Command and Response

```
#firmwareversion
```

Prerequisites

- GET /SYS/\<board>\_PackageVersion
- pr /SYS/\<board>\_PackageVersion="<firmware_version>

Example

```
GET /SYS/IB1\_PackageVersion
pr /SYS/IB1\_PackageVersion=1.0.0b20
```

8.5.9. Rebooting the I/O Board

The I/O board can be restarted – the current connections and the AV signal transmission will be terminated.

Command and Response

```
#restart #reboot #reset
```

Example

```
CALL /SYS/IB1:reset()
```

8.6. Video Switching and Crosspoint Settings

8.6.1. Querying the Video Crosspoint State

Command and Response

```
GET /MEDIA/XP/VIDEO.DestinationConnectionStatus
pr /MEDIA/XP/VIDEO.DestinationConnectionStatus=\<out1\_state>\_;\<out2\_state>\_;\ldots\_;\<out24\_state>
```

Parameters

- The \<out#\_state> parameters mean the output ports (O1, O2 etc.) one after the other. The value of the parameter shows the input port switched to the given output port.

Example

```
GET /MEDIA/XP/VIDEO.DestinationConnectionStatus
pr /MEDIA/XP/VIDEO.DestinationConnectionStatus=I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;I1;
```

8.6.2. Switching an Input to an Output

Command and Response

```
#switch #crosspoint
```

Example

```
CALL /MEDIA/XP/VIDEO:switch(I4\_O1)
```

8.6.3. Disconnecting the Output from any Input

Command and Response

```
CALL /MEDIA/XP/VIDEO:switch(0\_o<ut>)
```

Example

```
CALL /MEDIA/XP/VIDEO:switch(0\_I1)
```

8.6.4. Switching an Input to All Outputs

Command and Response

```
CALL /MEDIA/XP/VIDEO:switchAll(I<in>)
```

Example

```
CALL /MEDIA/XP/VIDEO:switchAll(I1)
```

**TIPS AND TRICKS:** All output ports can be disconnected with the '0' value:

```
CALL /MEDIA/XP/VIDEO:switchAll(0).
```
8.6.5. Multiple Switching

The whole crosspoint can be set by sending one command as follows.

**Command and Response**

- `CALL /MEDI A/XP/VIDEO:switchMulti(<out1_source>;<out2_source>;...;<out8_source>)`
- `mO /MEDI A/XP/VIDEO:switchMulti`

The source is not required to be set on all output ports (see the Example2).

**Parameters**

- The `<out#_source>` parameters mean the output ports one after the other. The value of the parameter shows the input port switched to the given output port.

**Example1**

- `CALL /MEDI A/XP/VIDEO:switchMulti(I1;I2;I3;I4;I5;I6;I7;I8)`
- `mO /MEDI A/XP/VIDEO:switchMulti`

**Example2**

- `CALL /MEDI A/XP/VIDEO:switchMulti(I1;I2;...;I5)`
- `mO /MEDI A/XP/VIDEO:switchMulti`

8.6.6. Muting a Video Input

**Command and Response** `#mute`

- `CALL /MEDI A/XP/VIDEO:muteSource(<in>)`
- `mO /MEDI A/XP/VIDEO:muteSource`

**Example**

- `CALL /MEDI A/XP/VIDEO:muteSource(I1)`
- `mO /MEDI A/XP/VIDEO:muteSource`

8.6.7. Unmuting a Video Input

**Command and Response** `#unmute`

- `CALL /MEDI A/XP/VIDEO:unmuteSource(<in>)`
- `mO /MEDI A/XP/VIDEO:unmuteSource`

**Example**

- `CALL /MEDI A/XP/VIDEO:unmuteSource(I1;I3)`
- `mO /MEDI A/XP/VIDEO:unmuteSource`

8.6.8. Locking a Video Input

**Command and Response** `#lock`

- `CALL /MEDI A/XP/VIDEO:lockSource(<in>)`
- `mO /MEDI A/XP/VIDEO:lockSource`

**Example**

- `CALL /MEDI A/XP/VIDEO:lockSource(I1;I2;I3)`
- `mO /MEDI A/XP/VIDEO:lockSource`

8.6.9. Unlocking a Video Input

**Command and Response** `#unlock`

- `CALL /MEDI A/XP/VIDEO:unlockSource(<in>)`
- `mO /MEDI A/XP/VIDEO:unlockSource`

**Example**

- `CALL /MEDI A/XP/VIDEO:unlockSource(I1;I3)`
- `mO /MEDI A/XP/VIDEO:unlockSource`

8.6.10. Muting a Video Output

**Command and Response** `#mute`

- `CALL /MEDI A/XP/VIDEO:muteDestination(<out>)`
- `mO /MEDI A/XP/VIDEO:muteDestination`

**Example**

- `CALL /MEDI A/XP/VIDEO:muteDestination(O1;O3)`
- `mO /MEDI A/XP/VIDEO:muteDestination`

8.6.11. Unmuting a Video Output

**Command and Response** `#unmute`

- `CALL /MEDI A/XP/VIDEO:unmuteDestination(<out>)`
- `mO /MEDI A/XP/VIDEO:unmuteDestination`

**Example**

- `CALL /MEDI A/XP/VIDEO:unmuteDestination(O1;O2)`
- `mO /MEDI A/XP/VIDEO:unmuteDestination`
8.6.12. Locking a Video Output

Command and Response
```
#lock
```

Example
```
CALL /MEDIA/XP/VIDEO:lockDestination(out)
mO /MEDIA/XP/VIDEO:lockDestination=
```

8.6.13. Unlocking a Video Output

Command and Response
```
#unlock
```

Example
```
CALL /MEDIA/XP/VIDEO:unlockDestination(out)
mO /MEDIA/XP/VIDEO:unlockDestination=
```

8.7. Audio Switching and Crosspoint Settings

8.7.1. Querying the Audio Crosspoint State

Command and Response
```
GET /MEDIA/XP/AUDIO.DestinationConnectionStatus
```

Parameters
```
The <out#_state> parameters mean the output ports (O1, O2 etc.) one after the other. The value of the parameter shows the input port switched to the given output port.
```

Example
```
GET /MEDIA/XP/AUDIO.DestinationConnectionStatus
```

8.7.2. Switching an Input to an Output

Command and Response
```
#switch #crosspoint
```

Example
```
CALL /MEDIA/XP/AUDIO:switch(in<out>)
mO /MEDIA/XP/AUDIO:switch=
```

8.7.3. Disconnecting the Output from any Input

Command and Response
```
CALL /MEDIA/XP/AUDIO:switch(0<out>)
mO /MEDIA/XP/AUDIO:switch=
```

8.7.4. Switching an Input to All Outputs

Command and Response
```
CALL /MEDIA/XP/AUDIO:switchAll(in)
mO /MEDIA/XP/AUDIO:switchAll=
```

Example
```
CALL /MEDIA/XP/AUDIO:switchAll(I1)
mO /MEDIA/XP/AUDIO:switchAll=
```

TIPS AND TRICKS: All output ports can be disconnected with the '0' value:
```
CALL /MEDIA/XP/AUDIO:switchAll(0).
```
8.7.5. Multiple Switching
The whole crosspoint can be set by sending one command as follows. #switch #crosspoint

Command and Response
- CALL /MEDIA/XP/AUDIO:switchMulti(<out1_source>;<out2_source>;...;<out8_source>)
- mO /MEDIA/XP/AUDIO:switchMulti=

The source is not required to be set on all output ports (see the Example2).

Parameters
- The <out#_source> parameters mean the output ports one after the other. The value of the parameter shows the input port switched to the given output port.

Example1
- CALL /MEDIA/XP/AUDIO:switchMulti(I1;I2;I3;I4;I5;I6;I7;I8)
- mO /MEDIA/XP/AUDIO:switchMulti=

Example2
- CALL /MEDIA/XP/AUDIO:switchMulti(I1;I2;...;I5)
- mO /MEDIA/XP/AUDIO:switchMulti=

8.7.6. Channel Mapping
The embedded/transmitted audio signal can be 2-channel LPCM or compressed (non-HBR) audio signal only. There are two possibilities in case of audio signal embedding/transmitting:
- If the selected signal is of type LPCM, the user can select the two channels to be transmitted.
- If the selected signal is compressed (non-HBR) audio, it can be embedded into the video stream without any further action.

Command and Response
- SET /MEDIA/PORTS/AUDIO/</out>/PARAMETERS.MainOutputChannels=<left_channel>;<right_channel>
- pw /MEDIA/PORTS/AUDIO/</out>/PARAMETERS.MainOutputChannels=<left_channel>;<right_channel>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;left_channel&gt;</td>
<td>Selected channels are transmitted to the left channel</td>
<td>1...8</td>
<td>Channel number</td>
</tr>
<tr>
<td>&lt;right_channel&gt;</td>
<td>Selected channels are transmitted to the right channel</td>
<td>1...8</td>
<td>Channel number</td>
</tr>
</tbody>
</table>

Example
- SET /MEDIA/PORTS/AUDIO/O26/PARAMETERS.MainOutputChannels=1;2
- pw /MEDIA/PORTS/AUDIO/O26/PARAMETERS.MainOutputChannels=1;2

8.7.7. Muting an Audio Input

Command and Response
- #mute
- CALL /MEDIA/XP/AUDIO:muteSource(<in>)
- mO /MEDIA/XP/AUDIO:muteSource=

Example
- CALL /MEDIA/XP/AUDIO:muteSource(I1)
- mO /MEDIA/XP/AUDIO:muteSource=

8.7.8. Unmuting an Audio Input

Command and Response
- #unmute
- CALL /MEDIA/XP/AUDIO:unmuteSource(<in>)
- mO /MEDIA/XP/AUDIO:unmuteSource=

Example
- CALL /MEDIA/XP/AUDIO:unmuteSource(I1;I3)
- mO /MEDIA/XP/AUDIO:unmuteSource=

8.7.9. Locking an Audio Input

Command and Response
- #lock
- CALL /MEDIA/XP/AUDIO:lockSource(<in>)
- mO /MEDIA/XP/AUDIO:lockSource=

Example
- CALL /MEDIA/XP/AUDIO:lockSource(I1;I2;I3)
- mO /MEDIA/XP/AUDIO:lockSource=

8.7.10. Unlocking an Audio Input

Command and Response
- #unlock
- CALL /MEDIA/XP/AUDIO:unlockSource(<in>)
- mO /MEDIA/XP/AUDIO:unlockSource=

Example
- CALL /MEDIA/XP/AUDIO:unlockSource(I1;I3)
- mO /MEDIA/XP/AUDIO:unlockSource=
8.7.11. Muting an Audio Output

Command and Response #mute

- CALL /MEDIA/XP/AUDIO:muteDestination(<out>)
- mO /MEDIA/XP/AUDIO:muteDestination=

Example
- CALL /MEDIA/XP/AUDIO:muteDestination(O1;O3)
- mO /MEDIA/XP/AUDIO:muteDestination=

8.7.12. Unmuting an Audio Output

Command and Response #unmute

- CALL /MEDIA/XP/AUDIO:unmuteDestination(<out>)
- mO /MEDIA/XP/AUDIO:unmuteDestination=

Example
- CALL /MEDIA/XP/AUDIO:unmuteDestination(O1;O2)
- mO /MEDIA/XP/AUDIO:unmuteDestination=

8.7.13. Locking an Audio Output

Command and Response #lock

- CALL /MEDIA/XP/AUDIO:lockDestination(<out>)
- mO /MEDIA/XP/AUDIO:lockDestination=

Example
- CALL /MEDIA/XP/AUDIO:lockDestination(O1;O4)
- mO /MEDIA/XP/AUDIO:lockDestination=

8.7.14. Unlocking an Audio Output

Command and Response #unlock

- CALL /MEDIA/XP/AUDIO:unlockDestination(<out>)
- mO /MEDIA/XP/AUDIO:unlockDestination=

Example
- CALL /MEDIA/XP/AUDIO:unlockDestination(O1;O2;O4)
- mO /MEDIA/XP/AUDIO:unlockDestination=

8.8. Video Source Port Settings - HDMI / OPTJ

The following settings are valid only for the following input boards: #hdmi #optj
- MX2M-4HDMI20-IB
- MX2M-4HDMI20-IB-E
- MX2M-4OPTJ-IB
- MX2M-4OPTJ-IB-E

8.8.1. Setting the HDCP

This setting allows sending non-encrypted content to a non-HDCP compliant display. See more information in the HDCP Management section.

Command and Response #hdcp

- SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.HdcpVersion=<number>
- pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.HdcpVersion=<number>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;number&gt;</td>
<td>The setting sets the maximum enabled HDCP level</td>
<td>0</td>
<td>HDCP-encryption is disabled.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>Encryption level is HDCP 1.4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>Encryption level is HDCP 2.2</td>
</tr>
</tbody>
</table>

Example
- SET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.HdcpVersion=2
- pw /MEDIA/PORTS/VIDEO/I1/PARAMETERS.HdcpVersion=2

8.8.2. Setting the Color Range

Command and Response #colorrange

- SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.InputColorRangeMode=<colorrange>
- pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.InputColorRangeMode=<colorrange>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;colorrange&gt;</td>
<td>Color range setting</td>
<td>Auto</td>
<td>Color range depends on the input signal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Full</td>
<td>Input is treated as full color range.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Limited</td>
<td>Input is treated as limited color range.</td>
</tr>
</tbody>
</table>

Example
- SET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.InputColorRangeMode=Full
- pw /MEDIA/PORTS/VIDEO/I1/PARAMETERS.InputColorRangeMode=Full
8.8.3. Setting the Hot Plug Detect (HPD)

Command and Response

`#hotplugdetect`

- `SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.EnableHPD=<hpd_setting>`
- `pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.EnableHPD=<hpd_setting>`

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;hpd_setting&gt;</td>
<td>Hot plug detect setting</td>
<td>AUTO</td>
<td>Hot plug detect state matches input 5V state.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>ON</td>
<td>Hot plug detect is enabled.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>OFF</td>
<td>Hot plug detect is disabled.</td>
</tr>
</tbody>
</table>

**Example**

- `SET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.EnableHPD=ON`
- `pw /MEDIA/PORTS/VIDEO/I1/PARAMETERS.EnableHPD=ON`

8.9. Video Source Port Settings - DP

The following settings are valid only for the following input boards: #displayport #dp

- MX2M-DH-4DP12-IB
- MX2M-DH-4DP12-IB-E

8.9.1. Setting the Maximum Lane Number

**Command and Response**

`#dplmaxlanecount`

- `SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpMaxLaneCount=<lane>`
- `pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpMaxLaneCount=<lane>`

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;lane&gt;</td>
<td>DisplayPort data transmission proceeds through the lanes. This defines the maximum number of lanes used.</td>
<td>1</td>
<td>One lane is able to transmit 5.4 Gbps of data.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>Two lanes are able to transmit 10.8 Gbps of data.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4</td>
<td>Four lanes are able to transmit 21.6 Gbps of data.</td>
</tr>
</tbody>
</table>

**Example**

- `SET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.DpMaxLaneCount=4`
- `pw /MEDIA/PORTS/VIDEO/I1/PARAMETERS.DpMaxLaneCount=4`

8.9.2. Setting the Maximum Link Data Rate

**Command and Response**

`#dplmaxlinkrate`

- `SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpMaxLinkRate=<data_rate>`
- `pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpMaxLinkRate=<data_rate>`

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;data_rate&gt;</td>
<td>The maximum data rate per lane.</td>
<td>RBR</td>
<td>Reduced Bit Rate uses 1.62 Gbps bandwidth.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>HBR</td>
<td>High Bit Rate uses 2.70 Gbps bandwidth.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>HBR2</td>
<td>High Bit Rate2 uses 5.40 Gbps bandwidth.</td>
</tr>
</tbody>
</table>

**Example**

- `SET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.DpMaxLinkRate=HBR2`
- `pw /MEDIA/PORTS/VIDEO/I1/PARAMETERS.DpMaxLinkRate=HBR2`

8.9.3. Setting the DP Power

This property allows providing 1.5W (500mA @ 3.3W) power on the DP_PWR pin. The default value is true.

**Command and Response**

`#dppower`

- `SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpEnablePower=<logical_value>`
- `pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpEnablePower=<logical_value>`

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;logical_value&gt;</td>
<td>DP power sending setting</td>
<td>true</td>
<td>The board sends 1.5W power on the chosen port.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The board does not provide any power on the chosen port.</td>
</tr>
</tbody>
</table>

**Example**

- `SET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.DpEnablePower=true`
- `pw /MEDIA/PORTS/VIDEO/I1/PARAMETERS.DpEnablePower=true`
### 8.9.4. Setting the Test Pattern Mode

**Command and Response**  
```
#testpattern #nosyncscreen
```

- SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpTpgMode=<tpg_mode>
- pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpTpgMode=<tpg_mode>

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;tpg_mode&gt;</td>
<td>The testpattern is enabled or disabled.</td>
<td>0</td>
<td>Disabled</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>Enabled</td>
</tr>
</tbody>
</table>

**Example**

- SET /MEDIA/PORTS/VIDEO/1/PARAMETERS.DpTpgMode=1
- pw /MEDIA/PORTS/VIDEO/1/PARAMETERS.DpTpgMode=1

### 8.9.5. Setting the Color Space Conversion

**Command and Response**  
```
#colorspace
```

- SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpConversion=<conversion_mode>
- pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpConversion=<conversion_mode>

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;conversion_mode&gt;</td>
<td>Color space conversion mode</td>
<td>OFF</td>
<td>Pass-through mode, the video signal is transmitted without any changing.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>422</td>
<td>The video converter subsamples the signal to 4:2:2.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>420</td>
<td>The video converter subsamples the signal to 4:2:0.</td>
</tr>
</tbody>
</table>

**Example**

- SET /MEDIA/PORTS/VIDEO/1/PARAMETERS.DpConversion=422
- pw /MEDIA/PORTS/VIDEO/1/PARAMETERS.DpConversion=422

### 8.9.6. Setting the Color Range

**Command and Response**  
```
#colorrange
```

- SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.InputColorRangeMode=<colorrange>
- pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.InputColorRangeMode=<colorrange>

**Parameters**

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;colorrange&gt;</td>
<td>Color range setting</td>
<td>Auto</td>
<td>Color range depends on the input signal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Full</td>
<td>Input is treated as full color range.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Limited</td>
<td>Input is treated as limited color range.</td>
</tr>
</tbody>
</table>

**Example**

- SET /MEDIA/PORTS/VIDEO/1/PARAMETERS.InputColorRangeMode=Full
- pw /MEDIA/PORTS/VIDEO/1/PARAMETERS.InputColorRangeMode=Full

### 8.9.7. Restarting Link Training

**Command and Response**  
```
#linktraining
```

- CALL /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpLinkTrain()
- CALL /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.DpLinkTrain()

**Example**

- CALL /MEDIA/PORTS/VIDEO/1/PARAMETERS.DpLinkTrain()
- CALL /MEDIA/PORTS/VIDEO/1/PARAMETERS.DpLinkTrain()
8.9.8. Setting the Hot Plug Detect (HPD)

Command and Response #hotplugdetect #hpd

- `SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.EnableHPD=<hpd_setting>`
- `pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.EnableHPD=<hpd_setting>`

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;hpd_setting&gt;</td>
<td>Hot plug detect setting</td>
<td>AUTO</td>
<td>Hot plug detect state matches input 5V state.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>ON</td>
<td>Hot plug detect is enabled.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>OFF</td>
<td>Hot plug detect is disabled.</td>
</tr>
</tbody>
</table>

Example

- `SET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.EnableHPD=ON`
- `pw /MEDIA/PORTS/VIDEO/I1/PARAMETERS.EnableHPD=ON`

8.9.9. Setting the HDCP

This setting allows sending non-encrypted content to a non-HDCP compliant display. See more information in the HDCP Management section.

Command and Response #hdcp

- `SET /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.HdcpVersion=<number>`
- `pw /MEDIA/PORTS/VIDEO/<in>/PARAMETERS.HdcpVersion=<number>`

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;number&gt;</td>
<td>Color space conversion mode</td>
<td>0</td>
<td>Auto mode, the color space setting depends on the source signal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>RGB</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>YUV 4:4:4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>3</td>
<td>YUV 4:2:2</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4</td>
<td>YUV 4:2:0</td>
</tr>
</tbody>
</table>

Example

- `SET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting=3`
- `pw /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting=3`

8.10. Video Destination Port Settings - HDMI / OPTJ

The following settings are valid only for the following output boards: #hdmi #optj

- MX2M-4HDMI20-OB
- MX2M-4HDMI20-OB-E
- MX2M-4OPTJ-OB
- MX2M-4OPTJ-OB-E

8.10.1. Setting the Color Space Conversion

ATTENTION! The MX2M-4HDMI20-OB and MX2M-4HDMI20-OB-E output boards accept video signals in 8, 10 and 12 bit color depth, but the sampling pattern conversion is always made in 8 bit.

Command and Response #colors

- `SET /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.ColorSpaceSetting=<conversion_mode>`
- `pw /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.ColorSpaceSetting=<conversion_mode>`

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;conversion_mode&gt;</td>
<td>Color space conversion mode</td>
<td>0</td>
<td>Auto mode, the color space setting depends on the source signal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>RGB</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>YUV 4:4:4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>3</td>
<td>YUV 4:2:2</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4</td>
<td>YUV 4:2:0</td>
</tr>
</tbody>
</table>

Example

- `SET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting=3`
- `pw /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorSpaceSetting=3`
8.10.2. Setting the Signal Type

Command and Response

- SET /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.ForcedSignalType=<signal_type>
- pw /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.ForcedSignalType=<signal_type>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;signal_type&gt;</td>
<td>Forced signal type of the output stream</td>
<td>AUTO</td>
<td>Signal type depends on the input signal.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>HDMI</td>
<td>Forced HDMI</td>
</tr>
<tr>
<td></td>
<td></td>
<td>DVI</td>
<td>Forced DVI</td>
</tr>
</tbody>
</table>

Example

- SET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ForcedSignalType=HDMI
- pw /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ForcedSignalType=HDMI

8.10.3. Setting the Power 5V

DIFFERENCE: The setting is only available for the MX2M-4HDMI20-OB and MX2M-4HDMI20-OB-E boards.

The setting enables/disables power 5V output.

Command and Response

- SET /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.Enable5V=<power_mode>
- pw /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.Enable5V=<power_mode>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;power_mode&gt;</td>
<td>Power 5V output mode</td>
<td>AUTO</td>
<td>On change of TMDS clock, power 5V is disabled for 1s, after that it is enabled again.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>ON</td>
<td>Enabled</td>
</tr>
<tr>
<td></td>
<td></td>
<td>OFF</td>
<td>Disabled</td>
</tr>
</tbody>
</table>

Example

- SET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.Enable5V=ON
- pw /MEDIA/PORTS/VIDEO/O1/PARAMETERS.Enable5V=ON

8.10.4. Setting the HDCP Mode

Command and Response

- SET /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.HdcpMode=<HDCP_mode>
- pw /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.HdcpMode=<HDCP_mode>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;HDCP_mode&gt;</td>
<td>HDCP mode setting</td>
<td>AUTO</td>
<td>The setting is the same as on the input port. The encryption of the signal on the output is the same as on the input.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>ALWAYS</td>
<td>Enabling maximum possible encryption all the time. The setting applies encryption on originally unencrypted streams.</td>
</tr>
</tbody>
</table>

Example

- SET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.HdcpMode=AUTO
- pw /MEDIA/PORTS/VIDEO/O1/PARAMETERS.HdcpMode=AUTO

8.10.5. Setting the Audio Source

The setting sets the source of the embedded audio stream.

Command and Response

- SET /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.AudioSource=<audio_source>
- pw /MEDIA/PORTS/VIDEO/<out>/PARAMETERS.AudioSource=<audio_source>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;audio_source&gt;</td>
<td>Source of the audio stream setting</td>
<td>HDMi</td>
<td>The original embedded audio signal is transmitted in the output stream.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>AudioLayer</td>
<td>The audio stream is selected and embedded from the audio layer (e.g. analog audio signal).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Off</td>
<td>Audio signal is disabled in the video stream.</td>
</tr>
</tbody>
</table>

Example

- SET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.AudioSource=AudioLayer
- pw /MEDIA/PORTS/VIDEO/O1/PARAMETERS.AudioSource=AudioLayer
8.11. Analog Audio Port Properties

INFO: The analog audio ports of the MX2M-AUX-8AUDIO board can be configured as an input or output by the user. See the details about it in the Analog Audio Port Configuration section.

INFO: Audio input port numbering can be found in the Audio Input Port Numbering, the audio output port numbering can be found in the Audio Output Port Numbering section.

The following settings are valid only for the following auxiliary (LS) board: #analogaudio #audio

• MX2M-AUX-8AUDIO

8.11.1. Querying the Input Ports of the Board

The query returns which ports are configured as inputs out of the eight available ones.

Command and Response

```plaintext
GET /SYS/<board>.AudioInput
pw /SYS/<board>.AudioInput=<status_of_the_ports>
```

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;board&gt;</td>
<td>The identifier of the board.</td>
<td>LS1...LS4</td>
<td>Auxiliary (LS - Low Speed) board ID, the values can be LS1, LS2, LS3, or LS4.</td>
</tr>
<tr>
<td>&lt;status_of_the_ports&gt;</td>
<td>The list of recent status of the analog audio ports</td>
<td>0</td>
<td>The port is not input port.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>The port is configured as input.</td>
</tr>
</tbody>
</table>

Example

```plaintext
GET /SYS/LS1.AudioInput
pw /SYS/LS1.AudioInput=0;0;0;0;1;1;1;1;0;0;0;0;0;0;0;0
```

Explanation

The first four ports are configured as inputs.

8.11.2. Querying the Output Ports of the Board

The query returns which ports are configured as outputs out of the eight available ones.

Command and Response

```plaintext
GET /SYS/<board>.AudioOutput
pw /SYS/<board>.AudioOutput=<status_of_the_ports>
```

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;board&gt;</td>
<td>The identifier of the board.</td>
<td>LS1...LS4</td>
<td>Auxiliary (LS - Low Speed) board ID, the values can be LS1, LS2, LS3, or LS4.</td>
</tr>
<tr>
<td>&lt;status_of_the_ports&gt;</td>
<td>The list of recent status of the analog audio ports</td>
<td>0</td>
<td>The port is not output port.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>The port is configured as output.</td>
</tr>
</tbody>
</table>

Example

```plaintext
GET /SYS/LS1.AudioOutput
pw /SYS/LS1.AudioOutput=0,0,0,0,1,1,1,1,0,0,0,0,0,0,0,0
```

Explanation

The last four ports are configured as outputs.

8.11.3. Setting the Volume in dB

Command and Response

```plaintext
#volume
SET /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.VolumedB=<volume>
pw /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.VolumedB=<volume>
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;volume&gt;</td>
<td>Sets the input volume (attenuation) between -95.625 dB and 0 dB in step of -0.375dB.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Example

```plaintext
SET /MEDIA/PORTS/AUDIO/I41/PARAMETERS.VolumedB=-15
pw /MEDIA/PORTS/AUDIO/I41/PARAMETERS.VolumedB=-15.000
```
8.11.4. Setting the Volume in dB by Steps

Command and Response

- CALL /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS:stepVolumedB(<volume>)
- pw /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS:stepVolumedB=

Example

- CALL /MEDIA/PORTS/AUDIO/I41/PARAMETERS:stepVolumedB(4)
- pw /MEDIA/PORTS/AUDIO/I41/PARAMETERS:stepVolumedB=

8.11.5. Setting the Volume in Percent

Command and Response

- SET /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.VolumePercent=<percent>
- pw /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.VolumePercent=<percent>

Example

- SET /MEDIA/PORTS/AUDIO/I41/PARAMETERS.VolumePercent=50
- pw /MEDIA/PORTS/AUDIO/I41/PARAMETERS.VolumePercent=50

8.11.6. Setting the Volume in Percent by Steps

Command and Response

- CALL /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS:stepVolumePercent(<percent>)
- pw /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS:stepVolumePercent=

Example

- CALL /MEDIA/PORTS/AUDIO/I41/PARAMETERS:stepVolumePercent(20)
- pw /MEDIA/PORTS/AUDIO/I41/PARAMETERS:stepVolumePercent=

8.11.7. Setting the Balance

Command and Response

- SET /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.Balance=<balance>
- pw /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.Balance=<balance>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;balance&gt;</td>
<td>Sets the balance; -100 means left balance, +100 means right balance, step is 1. Center is 0 (default).</td>
</tr>
</tbody>
</table>

Example

- SET /MEDIA/PORTS/AUDIO/O41/PARAMETERS.Balance=-15
- pw /MEDIA/PORTS/AUDIO/O41/PARAMETERS.Balance=-15.000

8.11.8. Setting the Balance by Steps

Command and Response

- CALL /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS:stepBalance(<balance>)
- pw /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS:stepBalance=

Example

- CALL /MEDIA/PORTS/AUDIO/I41/PARAMETERS:stepBalance(34)
- pw /MEDIA/PORTS/AUDIO/I41/PARAMETERS:stepBalance=

8.11.9. Setting the Gain

Command and Response

- SET /MEDIA/PORTS/AUDIO/<in>/PARAMETERS.Gain=<gain>
- pw /MEDIA/PORTS/AUDIO/<in>/PARAMETERS.Gain=<gain>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;gain&gt;</td>
<td>Sets the input gain between -12 dB and -6 dB.</td>
</tr>
</tbody>
</table>

Example

- SET /MEDIA/PORTS/AUDIO/I41/PARAMETERS.Gain=-10
- pw /MEDIA/PORTS/AUDIO/I41/PARAMETERS.Gain=-10.000
8.12. Dante® Audio Settings

INFO: Audio input port numbering can be found in the Audio Input Port Numbering, the audio output port numbering can be found in the Audio Output Port Numbering section.

The following settings are valid only for the following auxiliary (LS) board: #dante #aes67
- MX2M-AUX-DANTE-32CH

8.12.1. Renaming the Channel Label

Command and Response

- SET /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.ChannelLabel<number>=<channellabel>
- pw /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.ChannelLabel<number>=<channellabel>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;number&gt;</td>
<td>Number of the channel</td>
<td>0</td>
<td>ChannelLabel1</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>ChannelLabel2</td>
</tr>
</tbody>
</table>
| <channellabel> | Unique name of the channel | Unique name of the channel. The following characters are not allowed in the parameter: (); { } # % \  
| | | | |

Example

- SET /MEDIA/PORTS/AUDIO/I25/PARAMETERS.ChannelLabel=FlacPlayer_Left
- pw /MEDIA/PORTS/AUDIO/I25/PARAMETERS.ChannelLabel=FlacPlayer_Left

8.12.2. Querying the Sample Rate

Command and Response

- GET /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.SampleRate
- pr /MEDIA/PORTS/AUDIO/<in|out>/PARAMETERS.SampleRate=<samplerate>

Example

- GET /MEDIA/PORTS/AUDIO/I25/PARAMETERS.SampleRate
- pr /MEDIA/PORTS/AUDIO/I25/PARAMETERS.SampleRate=48000

8.13. System Monitoring Commands

TIPS AND TRICKS: All listed parameters which are listed in this section can be queried in one step with the following command:

GETALL /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS

8.13.1. Querying Connected Device Presence

Connected property indicates whether a cable or a device is connected to the input or output port.

Command and Response

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.Connected
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.Connected=<parameter>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>Connected device or cable indicator</td>
<td>0</td>
<td>Not present</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>Present</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

Example

- GET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.Connected
- pr /MEDIA/PORTS/VIDEO/I1/PARAMETERS.Connected=1

8.13.2. Querying Video Signal Presence on a Port

SignalPresent property indicates valid signal present on the port.

Command and Response

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.SignalPresent
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.SignalPresent=<parameter>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>Signal present indicator</td>
<td>0</td>
<td>Not present</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>Present</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

Example

- GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.SignalPresent
- pr /MEDIA/PORTS/VIDEO/O1/PARAMETERS.SignalPresent=1

#status #systemmonitor
8.13.3. Querying the Signal Type

SignalType property provides the type of the video signal.

Command and Response

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.SignalType
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.SignalType=<signal_type>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;signal_type&gt;</td>
<td>Signal type</td>
<td>0</td>
<td>DVI</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>HDMI</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>DP</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

Example

- GET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.SignalType
- pr /MEDIA/PORTS/VIDEO/I1/PARAMETERS.SignalType=2

8.13.4. Querying the Resolution of the Stream

The query returns with the resolution of the stream without blanking.

Command and Response

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.Resolution
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.Resolution=<resolution>

Example

- GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.Resolution
- pr /MEDIA/PORTS/VIDEO/O1/PARAMETERS.Resolution=3840x2160p60

8.13.5. Querying the Total Size of the Stream

The query returns with the resolution of the stream including the blanking.

Command and Response

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.TotalSize
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.TotalSize=<resolution>

Example

- GET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.TotalSize
- pr /MEDIA/PORTS/VIDEO/I1/PARAMETERS.TotalSize=4400x2248

8.13.6. Querying Embedded Audio Presence

EmbeddedAudioPresent property indicates that embedded audio is present in the video stream.

Command and Response

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.EmbeddedAudioPresent
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.EmbeddedAudioPresent=<parameter>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>Embedded audio presence indicator</td>
<td>0</td>
<td>Not present</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>Present</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

Example

- GET /MEDIA/PORTS/VIDEO/01/PARAMETERS.EmbeddedAudioPresent
- pr /MEDIA/PORTS/VIDEO/01/PARAMETERS.EmbeddedAudioPresent=1

8.13.7. Querying the Color Space of the Stream

Command and Response

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.ColorSpace
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.ColorSpace=<parameter>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>Color space of the stream</td>
<td>1</td>
<td>RGB</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>YUV 4:4:4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>3</td>
<td>YUV 4:2:2</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4</td>
<td>YUV 4:2:0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

Example

- GET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.ColorSpace
- pr /MEDIA/PORTS/VIDEO/I1/PARAMETERS.ColorSpace=4
### 8.13.8. Querying the Color Range of the Stream

**Command and Response**

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.ColorRange
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.ColorRange=<parameter>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>Color range of the stream</td>
<td>0</td>
<td>Full</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>Limited</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

**Example**

- GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorRange
- pr /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ColorRange=0

### 8.13.9. Querying the Color Depth of the Stream

**Command and Response**

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.ColorDepth
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.ColorDepth=<parameter>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>Color depth of the stream</td>
<td>0</td>
<td>8 bit per pixel</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>10 bit per pixel</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>12 bit per pixel</td>
</tr>
<tr>
<td></td>
<td></td>
<td>3</td>
<td>16 bit per pixel</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

**Example**

- GET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.ColorDepth
- pr /MEDIA/PORTS/VIDEO/I1/PARAMETERS.ColorDepth=1

### 8.13.10. Querying the HDCP-encryption Presence

**Command and Response**

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.HdcpActive
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.HdcpActive=<parameter>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>Presence of the HDCP-encryption</td>
<td>0</td>
<td>Not encrypted</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>Encrypted</td>
</tr>
<tr>
<td></td>
<td></td>
<td>F</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

**Example**

- GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.HdcpActive
- pr /MEDIA/PORTS/VIDEO/O1/PARAMETERS.HdcpActive=0

### 8.13.11. Querying the HDCP-encryption Level of the Stream

**Command and Response**

- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.ActiveHdcpVersion
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.ActiveHdcpVersion=<parameter>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>HDCP-encryption level of the stream</td>
<td>0</td>
<td>Not encrypted</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>HDCP v1.4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>HDCP v2.2</td>
</tr>
</tbody>
</table>

**Example**

- GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ActiveHdcpVersion
- pr /MEDIA/PORTS/VIDEO/O1/PARAMETERS.ActiveHdcpVersion=0
8.13.12. Querying the Maximum Supported HDCP-encryption Level

Command and Response
- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.MaxSupportedHdcpVersion
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.MaxSupportedHdcpVersion=<parameter>

Parameters
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>HDCP-encryption level of the stream</td>
<td>0</td>
<td>None</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>HDCP v1.4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>HDCP v2.2</td>
</tr>
</tbody>
</table>

Example
- GET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.MaxSupportedHdcpVersion
- pr /MEDIA/PORTS/VIDEO/I1/PARAMETERS.MaxSupportedHdcpVersion=2

8.13.13. Querying the HDCP Error

Command and Response
- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.HdcpError
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.HdcpError=<parameter>

Parameters
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parameter&gt;</td>
<td>HDCP error presence indicator</td>
<td>0</td>
<td>None</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
<td>Link integrity</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2</td>
<td>Incompatible</td>
</tr>
</tbody>
</table>

Example
- GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.HdcpError
- pr /MEDIA/PORTS/VIDEO/O1/PARAMETERS.HdcpError=0

8.13.14. Querying the TMDS Error Counters

Command and Response
- GET /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.TmdsErrorCounters
- pr /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS.TmdsErrorCounters=<ch0_error_cnt>;<ch1_error_cnt>;<ch2_error_cnt>

Parameters
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;ch0_error_cnt&gt;</td>
<td>TMDS error counter of the channel 0.</td>
</tr>
<tr>
<td>&lt;ch1_error_cnt&gt;</td>
<td>TMDS error counter of the channel 1.</td>
</tr>
<tr>
<td>&lt;ch2_error_cnt&gt;</td>
<td>TMDS error counter of the channel 2.</td>
</tr>
</tbody>
</table>

Example
- GET /MEDIA/PORTS/VIDEO/I1/PARAMETERS.TmdsErrorCounters
- pr /MEDIA/PORTS/VIDEO/I1/PARAMETERS.TmdsErrorCounters=0,0,0

8.13.15. Querying the Audio Mismatch Status

The query returns the audio mismatch status of the audio output port.

Command and Response
- GET /MEDIA/PORTS/AUDIO/<out>/PARAMETERS.AudioMismatch
- pr /MEDIA/PORTS/AUDIO/<out>/PARAMETERS.AudioMismatch=<status>

Parameters
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;status&gt;</td>
<td>Audio mismatch status</td>
</tr>
<tr>
<td>No mismatch</td>
<td>No mismatch</td>
</tr>
<tr>
<td>Compressed audio</td>
<td>Compressed audio</td>
</tr>
<tr>
<td>Channel not found thus falling back</td>
<td>Channel not found, thus falling back</td>
</tr>
<tr>
<td>Channel not found and cannot fall back</td>
<td>Channel not found and cannot fall back</td>
</tr>
<tr>
<td>HBR audio</td>
<td>HBR audio</td>
</tr>
</tbody>
</table>

Example
- GET /MEDIA/PORTS/VIDEO/O1/PARAMETERS.AudioMismatch
- pr /MEDIA/PORTS/VIDEO/O1/PARAMETERS.AudioMismatch=No mismatch
8.14. Preset Handling

The matrix switcher can store presets and the following are stored in each slot: input/output crosspoint state, muted/unmuted states. Preset loading has an effect on all ports, except the locked ones.

Command and Response
```
#preset
```
```
mO/MEDIA/PRESET:create(<preset_name>, VIDEO)
```

Parameters

- Up to 16 characters are allowed as `<preset_name>`. Letters (A-Z and a-z), hyphen (-), underscore (_), and numbers (0-9) are accepted. `VIDEO` is a mandatory parameter.

Example

```
CALL /MEDI A/PRESET:create(My_pres, VIDEO)
```

Explanation

The preset is stored as a new node (My_pres) under the /MEDIA/PRESET/ node.

8.14.2. Saving the Settings to an Existing Preset

Command and Response
```
<preset_name>:save(1)
```
```
mO/MEDIA/PRESET/<preset_name>:save=
```

Example

```
CALL /MEDI A/PRESET/My_pres:save(My_pres)
```

Explanation

The existing 'My_pres' has been overwritten with the current settings.

8.14.3. Loading a Preset

Command and Response
```
<preset_name>:load()
```
```
mO/MEDIA/PRESET/<preset_name>:load=
```

Example

```
CALL /MEDI A/PRESET/My_pres:load()
```

Explanation

'My_pres' preset has been loaded and applied.

8.14.4. Renaming a Preset

Command and Response
```
CALL /MEDIA/PRESET.rename(<Old_name>,<New_name>)
```
```
mO /MEDIA/PRESET.rename=
```

Example

```
CALL /MEDIA/PRESET.rename(My_Pres, Your_Pres)
```

Explanation

The preset has been renamed to 'Your_Pres'.

8.15. EDID Management

INFO: The detailed description of the parameters in the EDID management section (E, D, U, F) can be found in the EDID Management section.

```
#edid
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;emulated&gt;</td>
<td>The emulated EDID memory of the desired input port. Example: E1.</td>
</tr>
<tr>
<td>&lt;dynamic&gt;</td>
<td>Dynamic EDID memory index. Example: D1</td>
</tr>
<tr>
<td>&lt;user&gt;</td>
<td>User EDID memory index. Example: U1</td>
</tr>
<tr>
<td>&lt;factory&gt;</td>
<td>Factory EDID memory index. Example: F1</td>
</tr>
</tbody>
</table>

INFO: See all available resolutions of the factory EDID tracks in the table of the Factory EDID List section.

8.15.1. Querying the Emulated EDIDs

Command and Response
```
GET /EDID.EdidStatus
```
```
pr/EDID.EdidStatus=<emulated_slot1>;<emulated_slot2>...<emulated_slot24>
```

Example

```
GET /EDID.EdidStatus
```
```
pr/EDID.EdidStatus=F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137;F137
```

INFO: The detailed description of the parameters in the EDID management section (E, D, U, F) can be found in the EDID Management section.
8.15.2. Querying the Validity of a Dynamic EDID

Command and Response
- GET/EDID/D/<dynamic>.Validity
- pr/EDID/D/<dynamic>.Validity=<logical_value>

Parameters
The <logical_value> can be true or false.

Example
- GET/EDID/D/D1.Validity
- pr/EDID/D/D1.Validity=true
If the ‘Validity’ property is true, then a valid EDID is stored in D1 memory place.

8.15.3. Querying the Preferred Resolution of a User EDID

Command and Response
- GET/EDID/U/<user>.PreferredResolution
- pr/EDID/U/<user>.PreferredResolution=<resolution>

Example
- GET/EDID/U/U2.PreferredResolution
- pr/EDID/U/U2.PreferredResolution=1920x1080p60.00Hz

8.15.4. Emulating an EDID on an Input Port

Command and Response
- CALL/EDID:switch(<dynamic|user|factory|emulated>):<emulated>
- mO/EDID:switch

Example
- CALL/EDID:switch(F49:E1;U3:E2)
- mO/EDID:switch

8.15.5. Copying an EDID to User Memory

Command and Response
- CALL/EDID:copy(<dynamic|emulated|factory|user>):<user>
- mO/EDID:copy

Example
- CALL/EDID:copy(D1:U1,F148:U2)
- mO/EDID:copy
The EDID of the last connected sink of D1 (Output 1) is copied to U1, the F148 factory EDID is copied to U2.

8.15.6. Deleting an EDID from User Memory

Command and Response
- CALL/EDID:delete(<user>)
- mO/EDID:delete

Example
- CALL/EDID:delete(U1;U5)
- mO/EDID:delete

8.15.7. Resetting the Emulated EDIDs

Command and Response
- CALL/EDID:reset()
- mO/EDID:reset

Example
- CALL/EDID:reset()
- mO/EDID:reset
Calling this method switches all emulated EDIDs to a factory default one. See the table in the Factory EDID List section.
8.16. Health Status Monitoring Commands

8.16.1. Querying the Overall Health State of the Matrix

The query returns the overall health state of the matrix switcher, which equals the maximum value of the OverallHealthState parameter of each I/O board, the CECU, the HSMB, the Power Tray 1 and Power Tray 2.

**#health**

**ATTENTION!** In case of WARNING or ERROR result of the query, please download the system logs of the matrix immediately and power off the device as soon as possible.

**Command and Response**

- GET /HEALTH.OverallHealthState
- pr /HEALTH.OverallHealthState=<status>

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;status&gt;</td>
<td>Overall health state of the matrix</td>
<td>OK</td>
<td>No active warning or error level log entry exists for the system or a device seated in the system.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>WARNING</td>
<td>Active warning level log entry exists AND no active error level log entry exists for the system or a device seated in the system.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>ERROR</td>
<td>Active error level log entry exists for the system or a device seated in the system.</td>
</tr>
</tbody>
</table>

**Example**

- GET /HEALTH.OverallHealthState
- pr /HEALTH.OverallHealthState=OK

8.16.2. Querying the Temperature Warnings

The query returns with a semi-colon separated list of the devices that have an active temperature warning.

**ATTENTION!** If a device has active temperature warning, please make sure the air ventilation of the matrix is correct.

**Command and Response**

- GET /HEALTH.TemperatureWarning
- pr /HEALTH.TemperatureWarning=<device1>;<device2>;<deviceN>

**Example**

- GET /HEALTH.TemperatureWarning
- pr /HEALTH.TemperatureWarning=

8.16.3. Querying the Temperature Errors

The query returns with a semi-colon separated list of the devices that have an active temperature error.

**WARNING!** If a device has active temperature error, please make sure the air ventilation of the matrix is correct. Keeping the device in too high temperature long term may harm the electrical parts of the matrix.

**Command and Response**

- GET /HEALTH.TemperatureError
- pr /HEALTH.TemperatureError=<device1>;<device2>;<deviceN>

**Example**

- GET /HEALTH.TemperatureError
- pr /HEALTH.TemperatureError=

8.16.4. Querying the Voltage Warnings

The query returns with a semi-colon separated list of the devices that have an active voltage warning.

**Command and Response**

- GET /HEALTH.VoltageWarning
- pr /HEALTH.VoltageWarning=<device1>;<device2>;<deviceN>

**Example**

- GET /HEALTH.VoltageWarning
- pr /HEALTH.VoltageWarning=

8.16.5. Querying the Voltage Errors

The query returns with a semi-colon separated list of the devices that have an active voltage error.

**WARNING!** If a device has active voltage error, power off the device as soon as possible.

**Command and Response**

- GET /HEALTH.VoltageError
- pr /HEALTH.VoltageError=<device1>;<device2>;<deviceN>

**Example**

- GET /HEALTH.VoltageError
- pr /HEALTH.VoltageError=
8.16.6. Querying the Current Warnings

The query returns with a semi-colon separated list of the devices that have an active current warning.

Command and Response

- GET /HEALTH.CurrentWarning
- pr /HEALTH.CurrentWarning=<device1>;<device2>;...<deviceN>

Example

- GET /HEALTH.CurrentWarning
- pr /HEALTH.CurrentWarning=

8.16.7. Querying the Current Errors

The query returns with a semi-colon separated list of the devices that have an active current error.

WARNING! If a device has active current error, power off the device as soon as possible.

Command and Response

- GET /HEALTH.CurrentError
- pr /HEALTH.CurrentError=<device1>;<device2>;...<deviceN>

Example

- GET /HEALTH.CurrentError
- pr /HEALTH.CurrentError=

8.16.8. Querying the Fan Warnings

The query returns with a semi-colon separated list of the devices that have an active system fan warning.

Command and Response

- GET /HEALTH.FanWarning
- pr /HEALTH.FanWarning=<fan1>;<fan2>;...<fanN>

Example

- GET /HEALTH.FanWarning
- pr /HEALTH.FanWarning=

8.16.9. Querying the Fan Errors

The query returns with a semi-colon separated list of the devices that have an active system fan error.

Command and Response

- GET /HEALTH.FanError
- pr /HEALTH.FanError=<fan1>;<fan2>;...<fanN>

Example

- GET /HEALTH.FanError
- pr /HEALTH.FanError=

8.16.10. Querying the PSU Drawer Warnings

The query returns with a semi-colon separated list of the devices that have an active PSU warning.

Command and Response

- GET /HEALTH.PsuWarning
- pr /HEALTH.PsuWarning=<PSU1>;<PSU2>

Example

- GET /HEALTH.PsuWarning
- pr /HEALTH.PsuWarning=

8.16.11. Querying the PSU Drawer Errors

The query returns with a semi-colon separated list of the devices that have an active PSU error.

WARNING! If a device has active PSU drawer error, power off the device as soon as possible.

Command and Response

- GET /HEALTH.PsuError
- pr /HEALTH.PsuError=<PSU1>;<PSU2>

Example

- GET /HEALTH.PsuError
- pr /HEALTH.PsuError=
8.16.12. Querying the Health State of an I/O Board

The query returns with the actual health status information about the selected I/O board.

Command and Response

- GETALL /HEALTH /<board>
- pr /HEALTH /<board> Status=<status>
- pr /HEALTH /<board> ProductName=<product_name>
- pr /HEALTH /<board> SerialNumber=<serial_number>
- pr /HEALTH /<board> PartNumber=<part_number>
- pr /HEALTH /<board> UpTime=<second>
- pr /HEALTH /<board> TemperatureState=<status>
- pr /HEALTH /<board> VoltageState=<status>
- pr /HEALTH /<board> OverallHealthState=<status>
- pr /HEALTH /<board> Temperature0=<temperature0>
- pr /HEALTH /<board> Temperature1=<temperature1>
- pr /HEALTH /<board> Temperature2=<temperature2>
- pr /HEALTH /<board> Temperature3=<temperature3>
- pr /HEALTH /<board> Temperature4=<temperature4>
- pr /HEALTH /<board> Voltage0=<voltage0>
- pr /HEALTH /<board> Voltage1=<voltage1>
- pr /HEALTH /<board> Voltage2=<voltage2>
- pr /HEALTH /<board> Voltage3=<voltage3>
- pr /HEALTH /<board> Voltage4=<voltage4>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;board&gt;</td>
<td>The identifier of the board.</td>
<td>IB1...IB6</td>
<td>Input board ID, the values can be IB1, IB2, IB3, IB4 or IB6.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>OB1...OB6</td>
<td>Output board ID, the values can be OB1, OB2, OB3, OB4, OB5 or OB6.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>LS1...LS4</td>
<td>Auxiliary (LS - Low Speed) board ID, the values can be LS1, LS2, LS3, or LS4.</td>
</tr>
</tbody>
</table>

Example

- GETALL /HEALTH /IB5
- pr /HEALTH /IB5 Status=Operational
- pr /HEALTH /IB5 ProductName=MX2M-DH-4DP12-IB
- pr /HEALTH /IB5 SerialNumber=00006522
- pr /HEALTH /IB5 PartNumber=91120049
- pr /HEALTH /IB5 UpTime=343393

8.16.13. Querying the Health State of a PSU Drawer

The query returns with the actual health status information about the selected PSU drawer.

Command and Response

GETALL /HEALTH/<PSU>
pr /HEALTH/<PSU>.Enabled=<logical_value>
pr /HEALTH/<PSU>.FanSpeed0=<fanspeed>
pr /HEALTH/<PSU>.Temperature0=<temperature>
pr /HEALTH/<PSU>.Current0=<current0>
pr /HEALTH/<PSU>.Current1=<current1>
pr /HEALTH/<PSU>.DcOk0=<logical_value>
pr /HEALTH/<PSU>.DcOk1=<logical_value>
pr /HEALTH/<PSU>.PowerGood0=<logical_value>
pr /HEALTH/<PSU>.PowerGood1=<logical_value>
pr /HEALTH/<PSU>.TemperatureState=<status>
pr /HEALTH/<PSU>.CurrentState=<status>
pr /HEALTH/<PSU>.FanState=<status>
pr /HEALTH/<board>.OverallHealthState=<status>
pr /HEALTH/<board>.Status=<status>
pr /HEALTH/<PSU>.ProductName=<product_name>
pr /HEALTH/<PSU>.SerialNumber=<serial_number>
pr /HEALTH/<PSU>.PartNumber=<part_number>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;PSU&gt;</td>
<td>The identifier of the PSU drawer.</td>
<td>POWERDRAWER1</td>
<td>PSU drawer 1</td>
</tr>
<tr>
<td></td>
<td></td>
<td>POWERDRAWER2</td>
<td>PSU drawer 2</td>
</tr>
</tbody>
</table>
8.16.14. Querying the Health State of the HSMB

The query returns with the actual health status information about the High Speed Motherboard (HSMB).

Command and Response

GETALL /HEALTH/HSMB
pr /HEALTH/HSMB.Voltage0_1V0=<voltage0>
pr /HEALTH/HSMB.Voltage1_1V2=<voltage1>
pr /HEALTH/HSMB.Voltage2_1V5=<voltage2>
pr /HEALTH/HSMB.Voltage3_3V3=<voltage3>
pr /HEALTH/HSMB.Voltage4_5V0=<voltage4>
pr /HEALTH/HSMB.Voltage5_12V0=<voltage5>

pr /HEALTH/HSMB.Temperature2=72.50 C;0.00;75.00;0.00;85.00;65.00;72.50
pr /HEALTH/HSMB.FanSpeed0=0.00 RPM;10.00;65535.00;0.00;65535.00;0.00;0.00

8.16.15. Querying the Health State of the CECU

The query returns with the actual health status information about the Central Electronic Control Unit (CECU).

Command and Response

GETALL /HEALTH/CECU
pr /HEALTH/CECU.Temperature0=<temperature>
pr /HEALTH/CECU.TemperatureState=<status>
pr /HEALTH/CECU.OverallHealthState=<status>

Example

GETALL /HEALTH/CECU
pr /HEALTH/CECU.Temperature0=47.72 C;0.00;65.00;0.00;70.00;44.24;53.52
pr /HEALTH/CECU.TemperatureState=OK
pr /HEALTH/CECU.OverallHealthState=OK
8.17. Network Configuration

ATTENTION! Calling the ApplySettings() method after the network setting is always required. See the details in the Applying the Network Settings section.

8.17.1. Querying the DHCP State

Command and Response
- GET /MANAGEMENT/NETWORK.DhcpEnabled
- pw /MANAGEMENT/NETWORK.DhcpEnabled=<logical_value>

Parameters
The <logical_value> can be true or false.

Example
- GET /MANAGEMENT/NETWORK.DhcpEnabled
- pw /MANAGEMENT/NETWORK.DhcpEnabled=true

8.17.2. Changing the DHCP State

Command and Response
- SET /MANAGEMENT/NETWORK.DhcpEnabled=<logical_value>
- pw /MANAGEMENT/NETWORK.DhcpEnabled=<logical_value>

Parameters
The <logical_value> can be set to true or false.

Example
- SET /MANAGEMENT/NETWORK.DhcpEnabled=false
- pw /MANAGEMENT/NETWORK.DhcpEnabled=false

8.17.3. Querying the IP Address

Command and Response
- GET /MANAGEMENT/NETWORK.IpAddress
- pr /MANAGEMENT/NETWORK.IpAddress=<IP_address>

Example
- GET /MANAGEMENT/NETWORK.IpAddress
- pr /MANAGEMENT/NETWORK.IpAddress=192.168.0.100

8.17.4. Changing the IP Address (Static)

Command and Response
- SET /MANAGEMENT/NETWORK.StaticIpAddress=<IP_address>
- pw /MANAGEMENT/NETWORK.StaticIpAddress=<IP_address>

Example
- SET /MANAGEMENT/NETWORK.StaticIpAddress=192.168.0.85
- pw /MANAGEMENT/NETWORK.StaticIpAddress=192.168.0.85

8.17.5. Querying the Subnet Mask

Command and Response
- GET /MANAGEMENT/NETWORK.NetworkMask
- pr /MANAGEMENT/NETWORK.NetworkMask=<netmask>

Example
- GET /MANAGEMENT/NETWORK.NetworkMask
- pr /MANAGEMENT/NETWORK.NetworkMask=255.255.255.0

8.17.6. Changing the Subnet Mask (Static)

Command and Response
- SET /MANAGEMENT/NETWORK.StaticNetworkMask=<netmask>
- pw /MANAGEMENT/NETWORK.StaticNetworkMask=<netmask>

Example
- SET /MANAGEMENT/NETWORK.StaticNetworkMask=255.255.255.0
- pw /MANAGEMENT/NETWORK.StaticNetworkMask=255.255.255.0

8.17.7. Querying the Gateway Address

Command and Response
- GET /MANAGEMENT/NETWORK.GatewayAddress
- pr /MANAGEMENT/NETWORK.GatewayAddress=<gw_address>

Example
- GET /MANAGEMENT/NETWORK.GatewayAddress
- pr /MANAGEMENT/NETWORK.GatewayAddress=192.168.0.1
8.17.8. Changing the Gateway Address (Static)

Command and Response

- SET /MANAGEMENT/NETWORK.StaticGatewayAddress=<gw_address>
- pw /MANAGEMENT/NETWORK.StaticGatewayAddress=<gw_address>

Example

- SET /MANAGEMENT/NETWORK.StaticGatewayAddress=192.168.0.1
- pw /MANAGEMENT/NETWORK.StaticGatewayAddress=192.168.0.1

8.17.9. Applying the Network Settings

Command and Response

- CALL /MANAGEMENT/NETWORK:ApplySettings()
- mO /MANAGEMENT/NETWORK:ApplySettings

Example

- CALL /MANAGEMENT/NETWORK:ApplySettings()
- mO /MANAGEMENT/NETWORK:ApplySettings

8.18. RS-232 Port Configuration

8.18.1. Enabling/Disabling the Port

Command and Response

- SET /MANAGEMENT/SERIAL.Enabled=<logical_value>
- pw /MANAGEMENT/SERIAL.Enabled=<logical_value>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;logical_value&gt;</td>
<td>Port enable/disable setting</td>
<td>true</td>
<td>The port is enabled.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>The port is disabled.</td>
</tr>
</tbody>
</table>

Example

- SET /MANAGEMENT/SERIAL.Enabled=true
- pw /MANAGEMENT/SERIAL.Enabled=true

8.18.2. Setting the BAUD Rate

Command and Response

- SET /MANAGEMENT/SERIAL.Baudrate=<baudrate>
- pw /MANAGEMENT/SERIAL.Baudrate=<baudrate>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;baudrate&gt;</td>
<td>Baud rate value</td>
<td>200</td>
<td>200</td>
</tr>
<tr>
<td></td>
<td></td>
<td>300</td>
<td>300</td>
</tr>
<tr>
<td></td>
<td></td>
<td>600</td>
<td>600</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1200</td>
<td>1200</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1800</td>
<td>1800</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2400</td>
<td>2400</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4800</td>
<td>4800</td>
</tr>
<tr>
<td></td>
<td></td>
<td>9600</td>
<td>9600</td>
</tr>
<tr>
<td></td>
<td></td>
<td>19200</td>
<td>19200</td>
</tr>
<tr>
<td></td>
<td></td>
<td>38400</td>
<td>38400</td>
</tr>
<tr>
<td></td>
<td></td>
<td>57600</td>
<td>57600</td>
</tr>
<tr>
<td></td>
<td></td>
<td>115200</td>
<td>115200</td>
</tr>
</tbody>
</table>

Example

- SET /MANAGEMENT/SERIAL.Baudrate=57600
- pw /MANAGEMENT/SERIAL.Baudrate=57600

8.18.3. Setting the Databits

Command and Response

- SET /MANAGEMENT/SERIAL.DataBits=<databits>
- pw /MANAGEMENT/SERIAL.DataBits=<databits>

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;databits&gt;</td>
<td>Databits value</td>
<td>8</td>
<td>8 databits</td>
</tr>
<tr>
<td></td>
<td></td>
<td>9</td>
<td>9 databits</td>
</tr>
</tbody>
</table>

Example

- SET /MANAGEMENT/SERIAL.DataBits=8
- pw /MANAGEMENT/SERIAL.DataBits=8
8.18.4. Setting the Parity

Command and Response
- SET /MANAGEMENT/serial.Parity=<parity>
- pw /MANAGEMENT/serial.Parity=<parity>

Parameters
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;parity&gt;</td>
<td>Parity value</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>None</td>
<td>None</td>
<td>None</td>
</tr>
<tr>
<td></td>
<td>Odd</td>
<td>Odd</td>
<td>Odd</td>
</tr>
<tr>
<td></td>
<td>Even</td>
<td>Even</td>
<td>Even</td>
</tr>
<tr>
<td></td>
<td>Mark</td>
<td>Mark</td>
<td>Mark</td>
</tr>
<tr>
<td></td>
<td>Space</td>
<td>Space</td>
<td>Space</td>
</tr>
</tbody>
</table>

Example
- SET /MANAGEMENT/serial.Parity=Even
- pw /MANAGEMENT/serial.Parity=Even

8.18.5. Setting the Stopbits

Command and Response
- SET /MANAGEMENT/serial.StopBits=<stopbits>
- pw /MANAGEMENT/serial.StopBits=<stopbits>

Parameters
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;stopbits&gt;</td>
<td>Stop bits value</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>1</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

Example
- SET /MANAGEMENT/serial.StopBits=1
- pw /MANAGEMENT/serial.StopBits=1

8.18.6. Setting the Protocol

Command and Response
- SET /MANAGEMENT/serial.Protocol=<protocol>
- pw /MANAGEMENT/serial.Protocol=<protocol>

Parameters
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;protocol&gt;</td>
<td>Command protocol on</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>the serial port</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>LW2</td>
<td>LW2</td>
<td>Lightware LW2 command protocol</td>
</tr>
<tr>
<td></td>
<td>LW3</td>
<td>LW3</td>
<td>Lightware LW3 command protocol</td>
</tr>
<tr>
<td></td>
<td>P#2</td>
<td>P#2</td>
<td>Third-party command protocol</td>
</tr>
</tbody>
</table>

Example
- SET /MANAGEMENT/serial.Protocol=LW3
- pw /MANAGEMENT/serial.Protocol=LW3

8.18.7. Recalling Factory Default Settings on the Serial Port

Command and Response
- CALL /MANAGEMENT/serial.factoryDefault()
- m0 /MANAGEMENT/serial.factoryDefault=

Example
- CALL /MANAGEMENT/serial.factoryDefault()
- m0 /MANAGEMENT/serial.factoryDefault=

INFO: See the factory default values for the RS-232 port in the Factory Default Settings section.
8.19. Sending CEC Commands

INFO: The hidden first 2 bytes of the CEC command are static, they refer to the logical address of the sender and the addressee. When the port is input, it is always 04 (from TV to Playback device 1); when the port is output, it is always 40 (from Playback device 1 to TV). Broadcast addressing is also possible (in this case it is 0F or 4F).

INFO: The port numbering of the relevant I/O boards can be found in the Video Input/Output Port Numbering section.

The following settings are valid only for the following input and output boards:
- MX2M-4HDMI20-IB
- MX2M-4HDMI20-OB
- MX2M-4OPT J-IB
- MX2M-4OPT J-OB

8.19.1. Sending a CEC Command in Text Format

Command and Response

- CALL /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC:send(<command>)
- m0 /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC:send

Parameters

The followings are accepted as <command>:
- image_view_on standby text_view_on active_source give_power_status
- get_cec_version set_osd clear_osd

Example

- CALL /MEDIA/PORTS/VIDEO/O1/PARAMETERS/CEC:send(power_on)
- m0 /MEDIA/PORTS/VIDEO/O1/PARAMETERS/CEC:send

8.19.2. Press&Release Commands

CEC commands below are called 'push-button commands', like a button in a remote controller, e.g. volume up/down. When the CEC command is sent, the 'release' command is also sent in the background. Certain devices require this feature for the proper working, but this is necessary only for push-button commands.

Command and Response

- CALL /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC:sendClick(<command>)
- m0 /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC:sendClick

Parameters

The following are accepted as a <command>:
- ok number_2 input_select rewind select_media_4
- back number_3 display_info fast_forward select_media_5
- up number_4 power_legacy eject power_toggle
- down number_5 page_up skip_forward power_on
- left number_6 page_down skip_backward power_off
- right number_7 volume_up 3d_mode stop_function
- root_menu number_8 volume_down stop_record f1
- setup_menu number_9 mute_toggle pause_record f2
- contents_menu dot mute play_forward f3
- favorite_menu enter unmute play_reverse f4
- media_top_menu clear play select_next_media
- media_context_menu channel_up stop select_media_1
- number_0 channel_down pause select_media_2
- number_1 sound_select record select_media_3
- number_0 sound_select record select_media_3

Example

- CALL /MEDIA/PORTS/VIDEO/O1/PARAMETERS/CEC:sendClick(play)
- m0 /MEDIA/PORTS/VIDEO/O1/PARAMETERS/CEC:sendClick
8.19.3. Sending an OSD String

Sending the OSD string consists of two steps. First, set the CEC.OsdString property with the desired text, after that call the CEC.send(set_osd) method.

Step 1 – Setting the CEC.OsdString Property

Command and Response

- SET: /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC.OsdString=<text>
- pw: /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC.OsdString=<text>

Example

- SET: /MEDIA/PORTS/VIDEO/I1/PARAMETERS/CEC.OsdString=Lightware
- pw: /MEDIA/PORTS/VIDEO/I1/PARAMETERS/CEC.OsdString=Lightware

Step 2 – Call the CEC.send(set_osd) method

Command and Response

- CALL: /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC.send(set_osd)
- mO: /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC.send

Example

- CALL: /MEDIA/PORTS/VIDEO/I1/PARAMETERS/CEC.send(set_osd)
- mO: /MEDIA/PORTS/VIDEO/I1/PARAMETERS/CEC.send

8.19.4. Sending a CEC Command in Hexadecimal Format

Command and Response

- CALL: /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC.sendHex(<hex_code>)
- mO: /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC.sendHex

Example

- CALL: /MEDIA/PORTS/VIDEO/I1/PARAMETERS/CEC.sendHex(8700E091)
- mO: /MEDIA/PORTS/VIDEO/I1/PARAMETERS/CEC.sendHex

8.20. Firmware Updating of the I/O Boards

The firmware package files of all available MX2M series I/O boards are built-in into the firmware package of the MX2M matrix frame. The updating procedure can be applied inside the frame without using any external application like Lightware Device Updater V2 (LDU2).

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;board&gt;</td>
<td>The identifier of the board.</td>
<td>IB1...IB6</td>
<td>Input board ID, the values can be IB1, IB2, IB3, IB4, IB5 or IB6.</td>
</tr>
<tr>
<td>OB1...OB6</td>
<td>Output board ID, the values can be OB1, OB2, OB3, OB4, OB5 or OB6.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>LS1...LS4</td>
<td>Auxiliary (LS - Low Speed) board ID, the values can be LS1, LS2, LS3 or LS4.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

8.20.1. Querying the Firmware Version of the I/O Board

Command and Response

- GET /SYS/<board>.PackageVersion
- pr /SYS/<board>.PackageVersion=<firmware_version>

Example

- GET /SYS/LS1.PackageVersion
- pr /SYS/LS1.PackageVersion=1.0.0b20

8.20.2. Launching the Firmware Update Procedure

Calling the method launches the firmware update procedure on the selected I/O board.

Command and Response

- CALL /SYS/<board>:updateFirmware()
- mO /SYS/<board>:updateFirmware=

Example

- CALL /SYS/IB1:updateFirmware()
- mO /SYS/IB1:updateFirmware=
8.20.3. Cancelling the Firmware Update Procedure
Calling the method cancels the running firmware update procedure on the selected I/O board.

Command and Response
- CALL /SYS/<board>:cancelFirmwareUpdate()
- mO /SYS/<board>:cancelFirmwareUpdate=

Example
- CALL /SYS/OB1:cancelFirmwareUpdate()
- mO /SYS/OB1:cancelFirmwareUpdate=

8.20.4. Querying the Update Progress Status
The query returns with the logical value that tells whether there is a board in the matrix undergoing a firmware update or not.

Command and Response
- GET /SYS/UPDATE.BoardUpdateInProgress
- pr /SYS/UPDATE.BoardUpdateInProgress=<logical_value>

Parameters

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Parameter description</th>
<th>Value</th>
<th>Value description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;logical_value&gt;</td>
<td>Update in progress</td>
<td>true</td>
<td>One or more I/O boards are undergoing a firmware update.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
<td>No I/O board is undergoing a firmware update.</td>
</tr>
</tbody>
</table>

Example
- GET /SYS/UPDATE.BoardUpdateInProgress
- pr /SYS/UPDATE.BoardUpdateInProgress=true

8.20.5. Querying the List of Updating Boards
The query returns with the list of the I/O boards that are currently undergoing a firmware update.

Command and Response
- GET /SYS/UPDATE.BoardsInUpdateState
- pr /SYS/UPDATE.BoardsInUpdateState=<board_slot1>;<board_slot2>;<board_slotN>

Example
- GET /SYS/UPDATE.BoardsInUpdateState
- pr /SYS/UPDATE.BoardsInUpdateState=LS2;IB3;OB5

8.20.6. Querying the Overall Board Update Status
The query returns with the overall progress of the board update.

Command and Response
- GET /SYS/UPDATE.BoardUpdateStatus
- pr /SYS/UPDATE.BoardUpdateStatus=<status>

Example
- GET /SYS/UPDATE.BoardUpdateStatus
- pr /SYS/UPDATE.BoardUpdateStatus=3/3

Explanation
Firmware upgrade procedure of three I/O boards out of three is successfully completed.
### 8.21. LW3 Protocol Commands - Quick Summary

#### System Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Querying the Product Name</td>
<td>GET /ProductName</td>
</tr>
<tr>
<td>Setting the Device Label</td>
<td>SET /MANAGEMENT/LABEL/DeviceLabel=&lt;Custom_name&gt;</td>
</tr>
<tr>
<td>Querying the Serial Number</td>
<td>GET /SerialNumber</td>
</tr>
<tr>
<td>Querying the Firmware Version</td>
<td>GET /MANAGEMENT/UID/PACKAGE.Version</td>
</tr>
<tr>
<td>Querying the Date and Time of the System</td>
<td>GET /MANAGEMENT/DATETIME.CurrentTime</td>
</tr>
<tr>
<td>Setting the Date and Time Manually</td>
<td>CALL /MANAGEMENT/DATETIME:setTime=&lt;date_time&gt;</td>
</tr>
<tr>
<td>Setting the Brightness of the LCD Screen</td>
<td>SET /SYS/CECU/LCD.Brightness=&lt;parameter&gt;</td>
</tr>
<tr>
<td>Control Lock of the LCD Menu</td>
<td>SET /SYS/CECU/LCD.ControlLock=&lt;logical_value&gt;</td>
</tr>
<tr>
<td>Adding License</td>
<td>CALL /MANAGEMENT/LICENSE:addLicense()</td>
</tr>
<tr>
<td>Removing License</td>
<td>CALL /MANAGEMENT/LICENSE:removeLicense()</td>
</tr>
<tr>
<td>Software Resetting the Device</td>
<td>CALL /SYS:softReset()</td>
</tr>
<tr>
<td>Rebooting the Device</td>
<td>CALL /SYS:reset()</td>
</tr>
<tr>
<td>Restoring the Factory Default Settings</td>
<td>CALL /SYS:factoryDefaults()</td>
</tr>
</tbody>
</table>

#### I/O Board Management

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Querying the Status of a Board</td>
<td>GET /SYS/&lt;board&gt;-Status</td>
</tr>
<tr>
<td>Querying the Number of Seated I/O Boards</td>
<td>GET /SYS/UPDATE.NumberOfBoards</td>
</tr>
<tr>
<td>Querying the List of Seated I/O Boards</td>
<td>GET /SYS/UPDATE.BoardsInSeatedState</td>
</tr>
<tr>
<td>Querying the List of Operational I/O Boards</td>
<td>GET /SYS/UPDATE.BoardsInOperationalState</td>
</tr>
<tr>
<td>Querying the List of Failed I/O Boards</td>
<td>GET /SYS/BOARDNAME.BoardsInErrorState</td>
</tr>
<tr>
<td>Querying the Product Name of the I/O Board</td>
<td>GET /SYS/&lt;board&gt;-ProductName</td>
</tr>
<tr>
<td>Querying the Serial Number of the I/O Board</td>
<td>GET /SYS/&lt;board&gt;-SerialNumber</td>
</tr>
<tr>
<td>Querying the Firmware Version of the I/O Board</td>
<td>GET /SYS/&lt;board&gt;-PackageVersion</td>
</tr>
<tr>
<td>Rebooting the I/O Board</td>
<td>CALL /SYS/&lt;board&gt;-reset()</td>
</tr>
</tbody>
</table>

#### Video Switching and Crosspoint Settings

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Querying the Video Crosspoint State</td>
<td>GET /MEDIA/XP/VIDEO.DestinationConnectionStatus</td>
</tr>
<tr>
<td>Switching an Input to an Output</td>
<td>CALL /MEDIA/XP/VIDEO:switch(&lt;in&gt;:&lt;out&gt;)</td>
</tr>
<tr>
<td>Disconnecting the Output from any Input</td>
<td>CALL /MEDIA/XP/VIDEO:switch(0:&lt;out&gt;)</td>
</tr>
<tr>
<td>Switching an Input to All Outputs</td>
<td>CALL /MEDIA/XP/VIDEO:switchAll(&lt;in&gt;)</td>
</tr>
<tr>
<td>Multiple Switching</td>
<td>CALL /MEDIA/XP/VIDEO:switchMulti(&lt;out1_source&gt;:&lt;out2_source&gt;...:&lt;out8_source&gt;)</td>
</tr>
<tr>
<td>Muting a Video Input</td>
<td>CALL /MEDIA/XP/VIDEO:muteSource(&lt;in&gt;)</td>
</tr>
</tbody>
</table>
Unmuting a Video Input
- CALL /MEDIA/XP/VIDEO:unmuteSource(<in>)

Locking a Video Input
- CALL /MEDIA/XP/VIDEO:lockSource(<in>)

Unlocking a Video Input
- CALL /MEDIA/XP/VIDEO:unlockSource(<in>)

Muting a Video Output
- CALL /MEDIA/XP/VIDEO:muteDestination(<out>)

Unmuting a Video Output
- CALL /MEDIA/XP/VIDEO:unmuteDestination(<out>)

Locking a Video Output
- CALL /MEDIA/XP/VIDEO:lockDestination(<out>)

Unlocking a Video Output
- CALL /MEDIA/XP/VIDEO:unlockDestination(<out>)

Audio Switching and Crosspoint Settings

Querying the Audio Crosspoint State
- GET /MEDIA/XP/AUDIO.DestinationConnectionStatus

Switching an Input to an Output

- **Sending a CEC Command in Hexadecimal Format**
  - CALL /MEDIA/PORTS/VIDEO/<in|out>/PARAMETERS/CEC:sendHex(<hex_code>)
9. Firmware Update

The MX2M series matrix switchers can be updated using Lightware Device Updater V2 (LDU2) software via Ethernet. The firmware pack with the necessary components (*.lfp2 file) for your specific product and the LDU2 application can be downloaded from the Support page of our website: www.lightware.com.

- Preparation
- Running the Software
- The Updating Steps
- Updating Via GUI
- Command Line Interface (CLI)
- CLI Commands
- If the Update is not Successful
9. Firmware Update

ATTENTION! While the firmware is being updated, the normal operation mode is suspended, as the matrix is switched to bootload mode. Signal processing is not performed. Do not interrupt the firmware update. If any problem occurs, reboot the device and restart the process.

ATTENTION! The firmware update process has an effect on the configuration and the settings of the device. For more details, please see the Keeping the Configuration Settings section before the update.

9.1. Preparation

Most Lightware devices can be controlled over several interfaces (e.g. Ethernet, USB, RS-232). But the firmware can usually be updated over one dedicated interface, which is the Ethernet in most cases.

If you want to update the firmware of one or more devices, you need the following:

- LFP2 file
- LDU2 software installed on your PC or Mac.

Both can be downloaded from www.lightware.com/downloads.

Optionally, you can download the release notes file in HTML format.

9.1.1. About the Firmware Package (LFP2 File)

All the necessary tools and binary files are packed into the LFP2 package file. You need only this file to do the update on your device.

- This allows the use of the same LFP2 package for different devices.
- The package contains all the necessary components, binary, and other files.
- The release notes is included in the LFP2 file, which is displayed in the window where you select the firmware package file in LDU2.

9.1.2. LDU2 Installation

ATTENTION! Minimum system requirement: 2 GB RAM. The minimum screen resolution is 1600x900.

ATTENTION! Certain ports are used for the communication in the background; please check the list in the Applied Ports (Network Settings) section.

INFO: The Windows, Mac and Linux applications have the same look and functionality.

Download the software from www.lightware.com/downloads.

### Installation in case of Windows OS

Run the installer. If the User Account Control displays a pop-up message, click Yes.

#### Installation Modes

<table>
<thead>
<tr>
<th>Normal install</th>
<th>Snapshot install</th>
</tr>
</thead>
<tbody>
<tr>
<td>Available for Windows and macOS</td>
<td>Available for Windows</td>
</tr>
<tr>
<td>The installer can update only this instance</td>
<td>Cannot be updated</td>
</tr>
<tr>
<td>Only one updateable instance can exist for all users</td>
<td>More than one different version can be installed for each user</td>
</tr>
</tbody>
</table>

ATTENTION! Using the default Normal install is highly recommended.

INFO: If you have a previously installed version, you will be prompted to remove the old version before installing the new one.

### Installation in case of macOS

Mount the DMG file by double clicking on it, and drag the LDU2 icon over the Applications icon to copy the program into the Applications folder. If you want to copy LDU2 into another location, just drag the icon over the desired folder.

ATTENTION! Please check the firewall settings on the macOS device. LDC needs to be added to the exceptions of the blocked software for the proper operation.

INFO: This type of installer is equal to the Normal install of Windows.

### Installation in case of Linux

Step 1. Download the archive file (tar.gz) from www.lightware.com/downloads and unpack it to a temp folder.

Step 2. Run the install_ldu2.sh file in the temp folder. The script will install LDU2 into the following folder: HOME/ local/share/lightware/ldu2.

Step 3. The folder above will contain this file: LightwareDeviceUpdaterV2.sh, which can be used to start LDU2.
9.2. Running the Software

ATTENTION! The computer that runs LDU2 and the target device (that will be updated) must be in the same subnet. The update cannot be performed behind a firewall or gateway.

You have two options:

▪ Starting the LDU2 by double-clicking on the shortcut/program file, or
▪ Double-clicking on an LFP2 file.

9.2.1. LDU2 Interfaces

The software can be used over:

▪ The Graphical User Interface (GUI), or by
▪ The Command Line Interface (CLI).

LDU2 Auto-Update

At startup, the software checks whether a newer version is available on the web.

If you start the software by double-clicking on the LFP2 file, the firmware will be loaded. Press the Discover devices button; all the devices will be listed that are compatible with the selected firmware pack.

INFO: If you press the Choose package file button, the release notes of the LFP2 file will be displayed in the right panel; see the Step 1. Select the Firmware Package section.
Device List

When the discovery has completed, the devices available on the network are listed in the application.

If the desired device is not discovered, you can add it by typing the IP address in the dedicated field and pressing the Add device button.

Legend of the Icons

- **IP address editor**: The IP address of the device can be changed in the pop-up window.
- **Identify me**: Clicking on the icon results in the front panel LEDs blinking for 10 seconds, which helps to identify the device physically.
- **Favorite device**: The device has been marked, thus the IP address is stored. When a device is connected with that IP address, the star will be highlighted in that line.
- **Further information available**: Device is unreachable. Change the IP address by pressing the IP address editor icon or use the front panel buttons (if available).
- **Service mode**: The device is in bootloader mode. Backup and restore cannot be performed in this case.

9.3. The Updating Steps

**ATTENTION!** While the firmware is being updated, the normal operation mode is suspended, as the device is switched to bootloader mode. Signal processing is not performed. Do not interrupt the firmware update. If any problem occurs, reboot the unit and restart the process.

**Keeping the Configuration Settings**

By default, device configuration settings are restored when firmware update is finished. If factory reset has been chosen in the parameters window, all device settings will be erased. In the case of factory reset, you can save the settings of the device in the Lightware Device Controller software and restore it later.

The following flow chart demonstrates how this function works in the background.

1. **Create a backup**
   - The current configuration of the device is being saved into a configuration backup file on your computer.
2. **Start the Update**
   - The device reboots and starts in bootloader mode (firmware update mode).
3. **Update**
   - The CPU firmware is changed to the new one.
4. **Factory reset**
   - All configuration settings are restored to the factory default values.
5. **Conversion / Restore**
   - The firmware package checks the backup data before the restoration procedure, and if it is necessary, a conversion is applied to avoid incompatibility problems between the firmware versions. All configuration settings are restored to the device after the conversion.
   - If the factory default option is selected in the Parameters window, the conversion / restoration procedure will not be performed!
6. **Finish**
   - Once the firmware update procedure is finished, the device reboots and is ready for use.
9.4. Updating Via GUI

Step 1. Select the Firmware Package

Click on the Choose Firmware Package button and navigate to the location where the LFP2 file of the matrix frame is saved. When you click on the name of package, the preview of the release notes is displayed on the right side.

After the package file is loaded, the list is filtered to show compatible devices only. The current firmware version of the device is highlighted in orange if it is different from the version of the package loaded.

Step 2. Select the Desired Device for Updating

Pick the device for updating. The selected line will be highlighted in green.

ATTENTION! The default settings in the Update options window should be fine for most cases. Please do not modify them if it is not necessary.

Step 3. Check the Update Parameters.

Click on the Update options button to configure the firmware update.

Configuration Backup and Restore

- **Restore device configuration settings**: the configuration settings of the endpoint devices will be restored after the firmware update.
- **Factory reset the device**: if it is checked, all user settings and parameters will be cleared and the factory default settings will be applied to the device when the update is done. See the whole list of factory default settings of the endpoint device in the Factory Default Settings section.
- **Backup folder**: Set the path of the device configuration backup file, which is created automatically. The default path is USER_HOME/.ldu2/backup.

Advanced Settings

- **Do not make any backup file**: if it is checked, the configuration of the matrix switcher will not be restored after the firmware update.

Once the parameters are set, click on the Apply button to save the settings.
9. Firmware Update

Step 4. Start the Update and Wait until it is Finished.
Click on the **Start Update** button to start the procedure.
The status is shown in percent in the right side of the device line and the status of all of the procedures is shown in the lower light green progress bar.

![Firmware update in progress](image)

INFO: The device might reboot several times during the firmware update procedure.

Step 5. Wait until the Unit Reboots with the New Firmware.
Once the firmware update procedure is completed, the unit reboots with the new firmware.

9.5. Command Line Interface (CLI)

**DIFFERENCE:** The Command Line Interface is available from LDU2 v2.8.0b9.
The CLI of the LDU2 software is a simple tool for creating scriptable device updates without the need for human interactions. It allows batch updating with the same features that are available in case of GUI usage.

9.5.1. How to Run

**Running under Windows® OS**
The installer of LDU2 puts the following file into the installation folder:

`LightwareDeviceUpdaterV2_CLI.cmd`

CLI is available via this file, the exe is not suitable for that purpose. Open a command line window to execute or test the features directly.

**Step 1.** Open an Explorer window where the cmd file is located, the default is:

`c:\Program Files (x86)\Lightware\Lightware Device Updater V2\LightwareDeviceUpdaterV2_CLI.cmd`

**Step 2.** Click on the address line (highlighted with blue in the picture), type `cmd.exe` and press enter. The command interpreter window of Windows is opened at the path of the LDU2 install folder.

**Step 3.** Now you can use the `LightwareDeviceUpdaterV2_CLI.cmd` file with the commands and options, which are described in the coming sections:

**Running under Linux**
The Command Line Interface under Linux Operating Systems can be run by the following:

`LightwareDeviceUpdaterV2.sh`

Running an update:

```
bash LightwareDeviceUpdaterV2.sh update --ip 172.24.5.27 --package ~/Downloads/mx2-modular_v1.2.0b6.lfp2
```

The commands and options are the same under Windows® and Linux, too. The following sections contain examples with `LightwareDeviceUpdaterV2_CLI.cmd`.
9.5.2. How to Use

Command Structure

The commands can be run over CLI in the following way:

LightwareDeviceUpdaterV2_CLI.cmd [command] [options]

[command]: a certain command described in the coming sections; only one command can be run at a time.
[options]: mandatory and/or optional parameters of the command, if any. Optional parameters have a
default value, which can be found at each affected command. You only have to define the parameter if
you want to apply a different value. The order of the options is arbitrary.

Important Notes
▪ CLI is case-sensitive (including commands, options and other parameters).
▪ There is no limit regarding the number of the devices to update. At most, 20 devices are updated
simultaneously, when one of them is finished, the next (21st) will be started automatically.
▪ If an update is failed, the IP address of the affected device(s) are listed at the end.

9.6. CLI Commands

INFO: The commands and options described in the following sections are the same under Windows® and
Linux, too. The examples contain LightwareDeviceUpdaterV2_CLI.cmd.

About the Examples
▪ Sent command is in blue, response is in grey.
▪ If the response in practice is longer than listed in the example, this symbol can be seen: […]

9.6.1. Help

The defined commands and options can be listed by the help command.

Command
LightwareDeviceUpdaterV2_CLI.cmd help

Example
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd help

C:\Program Files (x86)\Lightware\Lightware Device Updater V2>lib\jre\bin\java.exe -jar lib\ldu2.jar help

Command line usage:
Win: LightwareDeviceUpdaterV2_CLI.cmd [command] [options]
Linux: LightwareDeviceUpdaterV2.sh [command] [options]

Commands:
▪ help
▪ version
▪ update
▪ deviceInfo
▪ restore
▪ packageOptions

9.6.2. LDU2 Version

The response shows the version of the LDU2 and the version of the Script API (the Application Programming
Interface that is used by the LDU2 and the script).

Command
LightwareDeviceUpdaterV2_CLI.cmd version

Example
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd version
C:\Program Files (x86)\Lightware\Lightware Device Updater V2\bin\java.exe -jar lib\ldu2.jar version

LDU2 version: 2.9.0b9
Script API version: 1.3.9

9.6.3. Checking For New LDU2 Version

The following command can be used to check if an update of LDU2 is available. This is just a request, since
the CLI is not suitable for handling the complete installer of the software.

Command
LightwareDeviceUpdaterV2_CLI.cmd checkForUpdates

Example 1
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd checkForUpdates
C:\Program Files (x86)\Lightware\Lightware Device Updater V2\bin\java.exe -jar lib\ldu2.jar checkForUpdates

Current LDU2 version: 2.9.1b1
LDU2 is up-to-date

Example 2
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd checkForUpdates
C:\Program Files (x86)\Lightware\Lightware Device Updater V2\bin\java.exe -jar lib\ldu2.jar checkForUpdates

Current LDU2 version: 2.9.1b1
New version is available online: v2.9.2b2
Download URL: http://update.lightware.hu/ldu2/lwr/v2.9.2b2/install_LDU2_v2.9.2b2.exe
9. Firmware Update

Hybrid Modular Matrix Switcher series – User’s Manual

9.6.4. Device Info

The most important information about the selected device is displayed; see the example for more details.

Command

\texttt{LightwareDeviceUpdaterV2\_CLI.cmd deviceInfo [options]}

<table>
<thead>
<tr>
<th>Option</th>

9.6.5. Update

This command can be used to update the firmware of the devices.

Command

\texttt{LightwareDeviceUpdaterV2\_CLI.cmd update [options]}

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>-p or --package</td>
<td>The path of the firmware package file</td>
<td>yes</td>
</tr>
<tr>
<td>-i or --ip</td>
<td>List of IP addresses of devices to be updated</td>
<td>one of them is mandatory</td>
</tr>
<tr>
<td>-n or --hostName</td>
<td>List of host names of devices to be updated</td>
<td></td>
</tr>
<tr>
<td>-b or --backupFolder</td>
<td>Folder to create device configuration backup at. Default: USER_HOME/_ldu2/backup</td>
<td>optional</td>
</tr>
<tr>
<td>-f or --factoryDefault</td>
<td>Apply factory reset during device update. Default: false</td>
<td>optional</td>
</tr>
<tr>
<td>-r or --reportProgress</td>
<td>Report update progress in percent. Default: false</td>
<td>optional</td>
</tr>
</tbody>
</table>

Package-specific options

Certain LFP2 packages have features that can be applied at this command; see the Package Options section. optional

\begin{verbatim}
ATTENTION! The configuration is restored automatically if the factory default option is not applied in the update command. In that case, there is no need to run the restore command after the update.
\end{verbatim}

Example

\begin{verbatim}
C:\Program Files (x86)\Lightware\Lightware Device Updater V2\Lib\jre\bin\java.exe -jar lib\ldu2.jar update --ip 192.168.1.12 --package C:\Firmwares\mx2-modular_v1.2.0b6.lfp2 --reportProgress
\end{verbatim}

C:\Program Files (x86)\Lightware\Lightware Device Updater V2\Lib\jre\bin\java.exe -jar lib\ldu2.jar update --ip 192.168.1.12 --package C:\Firmwares\mx2-modular_v1.2.0b6.lfp2 --reportProgress

\begin{verbatim}
[2021-05-12 08:59:36.336] [ INFO] [            main] - Package version: 1.3.2b3
[2021-05-12 08:59:39.409] [ INFO] [            main] - Device IPs: [192.168.1.12]
[2021-05-12 08:59:39.628] [ INFO] [            main] - All the selected devices are accessible over the network.
[2021-05-12 08:59:40.025] [ INFO] [    192.168.1.12] - Package version: 1.3.2b3
[2021-05-12 08:59:40.092] [ INFO] [    192.168.1.12] - Login functionality is currently not enabled.
[2021-05-12 08:59:41.229] [ INFO] [    192.168.1.12] - Creating backup of device settings...
[2021-05-12 08:59:43.582] [ INFO] [    192.168.1.12] - HTTP and HTTP post have got enabled on port 80
[2021-05-12 08:59:44.638] [ INFO] [    192.168.1.12] - No miniweb file is found on the device.
[2021-05-12 08:59:48.890] [ INFO] [    192.168.1.12] - Switching device into bootload mode...
\end{verbatim}

The lines containing “ProgressReporter” can be enabled optionally. If it is enabled, the current state is displayed every 5 seconds.
9.6.6. Restore

Restores device configuration from a backup file.

TIPS AND TRICKS: This command can be used for uploading a configuration to numerous devices (aka Configuration cloning by CLI).

Command

```
LightwareDeviceUpdaterV2_CLI.cmd restore [options]
```

Options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>-i or --ip</td>
<td>List of IP addresses of devices to be updated</td>
<td>one of them is mandatory</td>
</tr>
<tr>
<td>-n or --hostName</td>
<td>List of host names of devices to be updated</td>
<td></td>
</tr>
<tr>
<td>-b or --backupFile</td>
<td>The path of the configuration backup file</td>
<td>yes</td>
</tr>
<tr>
<td>-k or --keepOriginalIp</td>
<td>Do not override the network settings of the device with the ones in the backup file. It comes in handy when multiple devices' configuration is being restored from a single backup file. Default: false</td>
<td>optional</td>
</tr>
</tbody>
</table>

ATTENTION! The configuration is restored automatically if the factory default option is not applied in the update command. In that case, there is no need to run the restore command after the update.

Example

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd restore --ip 192.168.1.12 --backupFile C:\mybackup.lw3 --keepOriginalIp
```

INFO: The firmware package checks the backup data before the restoration procedure, and if it is necessary, a conversion is applied to avoid incompatibility problems between the firmware versions. In that case, two backup files are created: the original, and a new one with "_converted" suffix. Using the last one for restoring is recommended.

9.6.7. Package Options

Shows package-specific update options.

Command

```
LightwareDeviceUpdaterV2_CLI.cmd packageOptions [options]
```

Options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>-p or --package</td>
<td>The path of the firmware package file</td>
<td>yes</td>
</tr>
</tbody>
</table>

Example

```
C:\Program Files (x86)\Lightware\Lightware Device Updater V2>LightwareDeviceUpdaterV2_CLI.cmd packageOptions --package c:\Firmwares\mx2-modular_v1.2.0b6.lfp2
```

Backup and restore options:

- `--skipPresetsAtRestore`: if true, device presets will not be restored. (Default: false)
- `--uploadDefaultMiniWeb`: if true and no custom minweb is present on the device, the default built-in minweb will be uploaded to the device. (Default: false)

Test options:

- `--test`: if true, no update will be performed, communication with the device will be tested. (Default: false)

Package option example can be seen in the following section.
9.6.8. Complex Example

The following options are applied:

- Firmware is updated
- Factory default settings are restored

9.6.9. Exit Codes

There is a return value in all cases when a command run is finished. Currently, three codes are defined:

<table>
<thead>
<tr>
<th>Code</th>
<th>Displayed text</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>N/A</td>
<td>The update performed successfully</td>
</tr>
<tr>
<td>1</td>
<td>Error (ErrorCode:1)</td>
<td>The error happened during the update</td>
</tr>
<tr>
<td>2</td>
<td>CLI error (ErrorCode:2)</td>
<td>The error happened before starting the update</td>
</tr>
</tbody>
</table>

Querying the Exit Code under Windows®

c:\Program Files (x86)\Lightware\Lightware Device Updater V2\echo %errorlevel%

Querying the Exit Code under Linux

echo $?  

If this value is queried after the update and it is 0, the update performed successfully.

9.7. If the Update is not successful

- Restart the process and try the update again.
- If the device cannot be switched to bootloader (firmware update) mode, you can do that manually as written in the User’s manual of the device. Please note that backup and restore cannot be performed in this case.
- If the backup cannot be created for some reason, you will get a message whether to continue the process without backup or stop the update. A root cause can be that the desired device is already in bootloader (firmware update) mode, thus the normal operation mode is suspended and backup cannot be made.
- If an update is not successful, the Export log button becomes red. If you press the button, you can download the log file as a ZIP package, which can be sent to Lightware Support if needed. The log files contain useful information about the circumstances to find the root cause.
10 Troubleshooting

Usually, if the system seems not to transmit the signal as expected, the best strategy for troubleshooting is to check signal integrity through the whole signal chain starting from source side and moving forward to destination end.

### 10.2. How to Speed Up the Troubleshooting Process

Lightware’s technical support team is always working hard to provide the fastest support possible. Our team’s response time is one of the best in the industry, and in the toughest of cases we can directly consult with the hardware or software engineer who designed the product to get the information from the most reliable source.

However, the troubleshooting process can be even faster... with your help.

There are certain pieces of information that push us in the right direction to find the root cause of the problem. If we receive most of this information in the first e-mail, or it is gathered at the time when you call us, then there is a pretty high chance that we will be able to respond with the final solution right away.

This information is the following:

- Schematic (a pdf version is preferred, but a hand drawing is sufficient).
- Serial number(s) of the device(s) (it is either printed somewhere on the box or you can query it in the Device Controller software or on the built-in website).
- Firmware versions of the devices (please note that there may be multiple CPUs or controllers in the device and we need to know all of their firmware versions a screenshot is the best option).
- Cable lengths and types.
- Patch panels, gender changers or anything else in the signal path that can affect the transmission.
- Signal type (resolution, refresh rate, color space, deep color).
- Emulated EDID(s) (please save them as a file and send it to us).
- Actions to take in order to re-create the problem (if we cannot reproduce the problem, it is hard for us to find the cause).
- Photo or video about the problem (for example: "image noise" can mean many different things, it's better if we see it too).
- Error logs from the Device Controller software.
- In the case of an Event Manager issue, the event file and/or backup file from the Device Controller software.

The more of the information above you can give us, the better. Please send this information to the Lightware Support Team (support@lightware.com) to speed up the troubleshooting process.
11. Technologies

The following sections contain descriptions and useful technical information on how the devices work in the background. The content is based on experiences and cases we met in the practice. These sections help to understand features and technical standards like the following:

- EDID Management
- HDCP Management
- Pixel Accurate Reclocking
11. Technologies

11.1. EDID Management

11.1.1. Understanding the EDID

The Extended Display Identification Data (EDID) is the passport of display devices (monitors, TV sets, projectors). It contains information about the capabilities of the display, such as supported resolutions, refresh rates (these are called Detailed Timings), the type and manufacturer of the display device, etc.

After connecting a source to a display (DVI, HDMI, DP), the source reads out the EDID to determine the resolution and refresh rate of the image to be transmitted.

EDID Communication

Most DVI computer displays have a 128-byte-long EDID structure. However, Digital Televisions and HDMI capable displays may have another 128 bytes, which is called E-EDID and is defined by CEA (Consumer Electronics Association). This extension contains information about additional Detailed Timings, audio capabilities, speaker allocation and HDMI capabilities. It is important to know that all HDMI capable devices must have CEA extension, but not all devices with CEA extension are HDMI capable.

Common Problems Related to EDID

Problem: "My system consists of the following: a computer, a Lightware device, a WUXGA (1920x1200) LCD monitor, and an SXGA (1280x1024) projector. I would like to see the same image on the monitor and the projector. What EDID should I choose on the Lightware device?"

Solution: If you want to see the image on both displays, you need to select the resolution of the smaller display (in this case SXGA), otherwise the smaller display may not show the higher resolution image.

Problem: "I have changed to a different EDID on an input port of the Lightware device to have a different resolution, but nothing happens."

Solution: Some graphics cards and video sources read out the EDID only after power-up, and later they do not sense that the EDID has been changed. You need to restart your source to make it read out the EDID again.

11.1.2. Advanced EDID Management

Each DVI sink (e.g. monitors, projectors, plasma displays, etc...) must support the EDID data structure. Source BIOS and operating systems are likely to query the sink using DDC2B protocol to determine what pixel formats and interface are supported. DVI standard uses EDID data structure to identify the monitor type and capabilities. Most DVI sources (VGA cards, set top boxes, etc.) will output DVI signal after accepting the connected sink's EDID information. In the case of EDID readout failure or missing EDID, the source will not output DVI video signal.

Lightware devices provide the Advanced EDID Management function that helps system integration. The built-in EDID Router can store and emulate factory pre-programmed- and User programmable EDIDs. The EDID of the attached monitors or projectors for each output are stored in a non-volatile memory. This way the EDID of a monitor is available when the monitor is unplugged or switched off.

Any EDID can be emulated on any input. An emulated EDID can be copied from the EDID router's memory (static EDID emulation), or from the last attached monitor's memory (dynamic EDID emulation). For example, the Lightware device can be set up to emulate a sink device, which is connected to one of the outputs. In this case, the EDID automatically changes if the monitor is replaced with another display device (as long as it has a valid EDID). EDID is independently programmable for all inputs without affecting each other. All inputs have their own EDID circuit.

INFO: The user is not required to disconnect the video cable to change an EDID as opposed to other manufacturer's products. EDID can be changed even if a source is connected to the input and powered ON.

INFO: When EDID has been changed, the router toggles the HOTPLUG signal for 2 seconds. Some sources do not sense this signal. In such cases, the source device must be restarted or powered OFF and ON again.
11.2. HDCP Management

Lightware Visual Engineering is a legal HDCP adopter. Several functions have been developed that help solve HDCP related problems. Complex AV systems often have both HDCP and non-HDCP components. The matrix allows transmitting HDCP encrypted and unencrypted signals. The devices will be still HDCP compliant, as they will never output an encrypted signal to a non-HDCP compliant display device. If an encrypted signal is switched to a non-compliant output, a red screen alert or muted screen will appear.

11.2.1. Protected and Unprotected Content

Many video sources send HDCP protected signal if they detect that the sink is HDCP capable – even if the content is not copyrighted. This can cause trouble if an HDCP capable device is connected between the source and the display. In this case, the content cannot be viewed on non-HDCP capable displays and interfaces like event controllers. Rental and staging technicians often complain about certain laptops, which are always sending HDCP encrypted signals if the receiver device (display, matrix router, etc.) reports HDCP compliance. Even though, HDCP encryption is not required all the time (e.g. computer desktop image), certain laptops still do that.

To avoid unnecessary HDCP encryption, Lightware introduced the HDCP enabling/disabling function: the HDCP capability can be disabled in the Lightware device. If HDCP is disabled, the connected source will detect that the sink is not HDCP capable, and turn off authentication.

11.2.2. Disable Unnecessary Encryption

HDCP Compliant Sink

All the devices are HDCP-compliant, no manual setting is required, both protected and unprotected contents are transmitted and displayed on the sink.

Not HDCP-compliant Sink 1.

Not-HDCP compliant sink is connected to the matrix. Some sources (e.g. computers) always send HDCP encrypted signals if the receiver device reports HDCP compliancy, however, HDCP encryption is not required all the time (e.g. computer desktop image). If HDCP is enabled in the matrix, the image will not be displayed on the sink.

Setting the HDCP parameter to Auto on the output port and disable HDCP on the input port, the transmitted signal will not be encrypted if the content is not protected. Thus, non-HDCP compliant sinks will display non-encrypted signal.

Not HDCP-compliant Sink 2.

The layout is the same as in the previous case: non-HDCP compliant display device is connected to the matrix but the source would send protected content with encryption. If HDCP is enabled on the input port of the matrix, the source will send encrypted signal.

The sink is not HDCP compliant, thus it will not display the video signal (but blank/red/muted/etc. screen). If HDCP is disabled on the input port of the matrix, the source will not send the signal. The solution is to replace the display device to an HDCP-capable one.
11. Technologies

11.2.3. HDCP v2.2

HDCP v2.2 is the latest evolution of copy protection. It is designed to create a secure connection between a source and a display. The 2.x version of HDCP is not a continuation of HDCP v1, and is rather a completely different link protection. One of the main differences is the number of the allowed devices within a closed A/V system: HDCP v2.2 allows 32 devices (HDCP v1.4 allows 128 devices). A further limit is that up to four level is allowed, which means the protected signal can be transmitted over at most four repeater/matrix/switcher devices. HDCP content protection is activated only if an active video stream is transmitted from the source to the display. The encryption is not activated without a video signal.

HDCP v2.2 standard allows applying a previous version of HDCP (e.g. HDCP v1.4) between the source and the display if the source device allows it. According to the standard if the image content is protected with HDCP, the highest supported content protection level has to be applied. However, if the highest level of protection is not justified by the source content, the level may be decreased to avoid compatibility problems; this case is determined by the source.

HDCP v2.2 Source and HDCP v1.4 Sink

In this case the signal of an HDCP v2.2 compliant source is switched to an HDCP v1.4 compliant sink device. The signal is encrypted with HDCP v2.2 on the input and encrypted with HDCP v1.4 on the output of the Lightware device. A lower level of encryption may be applied only if the source device/content allows it - according to the HDCP standard. In this case the HDCP setting on the input port has to be set to HDCP 1.4 and Depends on input on the output port.

HDCP v1.4 Source and HDCP v2.2 Sink

The example below is the reversal of the previous case. An HDCP v1.4 compliant source sends a signal with HDCP v1.4 encryption. The signal is switched to an HDCP v2.2 compliant sink device. In this case the outgoing signal has to be encrypted with the highest supported encryption level towards the sink, as the Lightware device and the sink are both HDCP v2.2 compliant. The HDCP v2.2 standard does not allow keeping the original HDCP v1.4 encryption level on the output.

What Kind of Signal Will be on the Output of the Lightware Device?

See the table below that summarizes the possible cases:

<table>
<thead>
<tr>
<th>Incoming Signal</th>
<th>HDCP v1.4 Compatible Sink on the Output</th>
<th>HDCP v2.2. Compatible Sink on the Output</th>
</tr>
</thead>
<tbody>

<td>HDCP v1.4</td>
<td>HDCP v2.2</td>
</tr>
<tr>
<td>HDCP v2.2 (not convertable)*</td>
<td>Red screen</td>
<td>HDCP v2.2</td>
</tr>
</tbody>
</table>

* Stream type 0: the video stream allows the conversation of the signal to apply a lower level of encryption.
** Stream type 1: the video stream does not allow the conversation of the signal.
11.3. Pixel Accurate Reclocking

Signal reclocking is an essential procedure in digital signal transmission. After passing the reclocking circuit, the signal becomes stable, jitter-free, and can be transmitted over more equipment like processors, or event controllers. Without reclocking, sparkles, noise, and jaggies appear on the image.

Lightware’s sophisticated Pixel Accurate Reclocking technology fixes more problems than general TMDS reclocking. It removes not only intra-pair skew, but inter-pair skew as well. The Pixel Accurate Reclocking circuit eliminates the following errors:

**Intra-pair skew**
Skew between the + and - wires within a differential wire pair (e.g. Data2- and Data2+). It's caused by different wire lengths or slightly different wire construction (impedance mismatch) in DVI cable. It results in jitter.

**Inter-pair skew**
Skew between two differential wire pairs in a cable. It is caused by different wire pair lengths or different number of twists in the DVI cable. Too much inter-pair skew results in color shift in the picture or sync loss.

**Jitter**
Signal instability in the time domain. The time difference between two signal transitions should be a fixed value, but noise and other effects cause variations.

**Noise**
Electromagnetic interference between other electronic devices such as mobile phones, motors, etc. and the DVI cable are coupled onto the signal. Too much noise results in increased jitter.

#### Power

- Number of power drawer slots: 2
- Applicable power drawers: MX2M-PSU-500-F, MX2M-PSU-1250-F

#### Enclosure

- Rack mountable: Yes
- Material: 1.5 mm steel
- Rack size: 8U high, 1 rack wide
- Dimensions in mm: 441W x 400D x 354.8H
- Dimensions in inch: 17.4W x 15.7D x 14H
- Dimensions with rack ears and PSU drawers in mm: 483W x 473D x 354.8H
- Dimensions with rack ears and PSU drawers in inch: 19W x 18.6D x 14H
- Weight (frame only): 15.9 kg (35.05 lbs)
- Weight (installed with two power supply units): 24.9 kg (54.89 lbs)

### Control Ports

#### Ethernet Ports

- Number of ports: 3
- Connector type: Neutrik etherCON RJ45 female connector
- Ethernet date rate: 10/100/1000Base-T, full duplex with autodetect
- Power over Ethernet (PoE): Not supported

#### RS-232 Serial Port

- Number of ports: 1
- Connector type: 9-pole D-SUB female
- Baud rates: Between 4800 and 115200 Baud
- Parity: None / Odd / Even
- Stop bits: 1 / 1.5 / 2

#### USB Port

- Number of ports: 1
- Connector type: USB mini-B type
- USB compliance: USB 2.0

### 12.1.2. MX2M-PSU-500-F

# Enclosure

**General**

- **Compliance**: CE
- **Electrical safety compliance**: EN 62368-1:2014 Class II
- **EMC compliance (emission)**: EN 55032:2015
- **EMC compliance (immunity)**: EN 55035:2017
- **RoHS compliance**: EN 50581:2012
- **Warranty**: 3 years
- **Cooling**: Passive
- **Operating temperature**: 0°C to +50°C (+32°F to +122°F)
- **Storage temperature**: -40°C to +85°C (-40°F to +185°F)
- **Operating humidity**: 10% to 90%, non-condensing

**Material**: 1.5 mm steel

**Dimensions in mm**: 194.5W x 208.5D x 35.5H

**Dimensions in inch**: 7.68W x 8.25D x 1.39H

**Weight**: 276 g (0.6 lbs)

# MX2M-4HDMI20-IB

**Power Adaptor**

- **Supported power source**: 100-240 V AC; 50/60 Hz
- **Input voltage range**: 90-264 VAC
- **Input frequency range**: 47-63 Hz
- **Input AC current (typ)**: 4.17 A @ 12 VDC
- **Rated output current**: 41.7 A @ 12 VDC, 15.7 A @ 48 VDC

**Enclosure**

- **Hot-swappable**: Yes
- **Dimensions in mm**: 206W x 376D x 48H
- **Dimensions in inch**: 8.11W x 14.8D x 1.89H
- **Weight**: 4480 g (9.87 lbs)

**Warranty**: 3 years

**Cooling**: Passive

**Operating temperature**: 0°C to +50°C (+32°F to +122°F)

**Storage temperature**: -40°C to +85°C (-40°F to +185°F)

**Operating humidity**: 10% to 90%, non-condensing

**Material**: 1.5 mm steel

**Dimensions in mm**: 194.5W x 208.5D x 35.5H

**Dimensions in inch**: 7.68W x 8.25D x 1.39H

**Weight**: 276 g (0.6 lbs)

**Video Inputs**

- **Number of ports**: 4
- **Connector type**: 19-pole HDMI Type A receptacle
- **A/V standard**: DVI 1.0, HDMI 2.0
- **HDCP compliance**: HDCP 1.4 and HDCP 2.2
- **Color space**: RGB, YCbCr 4:4:4, YCbCr 4:2:2, YCbCr 4:2:0
12.1.5. MX2M-4HDMI20-IB-E

Input cable equalization .......................................................................................... Dolby TrueHD, DTS-HD Master Audio 7.1

* All standard VESA, CEA and other custom resolutions up to 120MHz (HDMI 2.0) are supported.
### Video Inputs

**Number of ports**
- MX2M-DH-4DP12-IB-E: 4
- MX2M-4OPTJ-IB: 4

**Connector type**
- MX2M-DH-4DP12-IB-E: 20-pole DisplayPort receptacle
- MX2M-4OPTJ-IB: 20-pole DisplayPort receptacle

**A/V standard**
- MX2M-DH-4DP12-IB-E: DP 1.2a
- MX2M-4OPTJ-IB: DP 1.2a

**HDCP compliance**
- MX2M-DH-4DP12-IB-E: HDCP 1.4 and HDCP 2.2
- MX2M-4OPTJ-IB: HDCP 1.4 and HDCP 2.2

**Color space**
- RGB, YCbCr 4:4:4, YCbCr 4:2:2, YCbCr 4:2:0

**Video delay**
- 0 frame

**Supported resolutions at 8 bits/color**
- MX2M-DH-4DP12-IB-E:
  - up to 4096x2048@30Hz (4:4:4) or 4096x2048@60Hz (4:2:0)
  - up to 3840x2160@30Hz (4:4:4) or 3840x2160@60Hz (4:2:0)
  - 1920x1080@60Hz (4:4:4) up to 12 bits/color

**Reclocking**
- Pixel Accurate Reclocking

**Audio formats**
- Yes (8 channel PCM)

**Audio**
- RGB, YCbCr 4:4:4, YCbCr 4:2:2, YCbCr 4:2:0

**Reclocking**
- Pixel Accurate Reclocking

**3D support**
- Yes

**Warranty**
- 3 years

**Dimensions in mm**
- MX2M-DH-4DP12-IB-E: 194.5W x 208.5D x 35.5H
- MX2M-4OPTJ-IB: 174.4W x 157.0D x 14H

**Weight**
- MX2M-DH-4DP12-IB-E: 288 g (0.63 lbs)
- MX2M-4OPTJ-IB: 340 g (0.74 lbs)

**Audio Ports**

| Number of ports | 8                          |
| Connector type  | 5-pole Phoenix connector   |
| Port type       | Configurable by jumper (Input / Output) |
12.2. Switch Setup for Dante® Audio Signal Transmission

You can configure the QoS settings to ensure good system performance in a busy network. QoS (Quality of Service) refers to technology for prioritizing the transfer of specific data. By configuring the QoS settings recommended by Dante on a network switch, you can prioritize the transfer of Dante clock synchronization data and audio data over background data traffic. This will ensure good system performance when you need to transfer non-Dante data over the same network. QoS is required when using Dante in networks that have 100Mbps devices and is optional in networks with Gigabit devices. We recommend that QoS be enabled in all Dante networks in order to ensure proper operation under all possible conditions.

The table below shows how Dante uses various Diffserv Code Points (DSCP) packet priority values:

<table>
<thead>
<tr>
<th>Priority</th>
<th>Usage</th>
<th>DSCP Label</th>
<th>Hex</th>
<th>Decimal</th>
<th>Binary</th>
</tr>
</thead>
<tbody>
<tr>
<td>High</td>

</tr>
</tbody>
</table>

Green Ethernet in the Network

EEE (Energy Efficient Ethernet) is a technology that reduces switch power consumption during periods of low network traffic. It is also sometimes known as Green Ethernet and IEEE802.3az.

Although power management should be negotiated automatically in switches that support EEE, it is a relatively new technology, and some switches do not perform the negotiation properly. This may cause EEE to be enabled in Dante networks when it is not appropriate, resulting in poor synchronisation performance and occasional dropouts.

12.5. Input/Output Port Numbering

12.5.1. Video Input/Output Port Numbering

The following drawing describes the video port numbering of the MX2M-FR24R matrix frame.

```
AUX 1  AUX 2
AUX 3  AUX 4
IB 1   IB 2
IB 3   IB 4
IB 5   IB 6
OB 1   OB 2
OB 3   OB 4
OB 5   OB 6
```

12.5.2. Audio Input Port Numbering

The following table shows the audio input numbering of the matrix. The audio port numbers are reserved and fixed for each I/O board slots because of the following reasons:

- The I/O board models are built with different number of ports;
- The boards can be installed to various board slots;
- The AUX boards can also be installed to the slots that are dedicated to IB and OB boards.

<table>

### Legend

- **D**: DVI EDID
- **H**: HDMI EDID
- **U**: Universal EDID (supporting many common EDIDs)
- **4:2:0**: EDID with chroma color subsampling
- **4:4:4**: EDID without color subsampling
- **H2**: HDMI2.0-compatible EDID
- **HDR**: EDID with High Dynamic Range mode support
- **RB**: Reduced blanking interval
- **PCM**: With PCM audio support
- **ALL**: All type of audio support (within the HDMI standard)

Please note that minor changes in the factory EDID list may be applied in further firmware versions.
12.8. Cable Wiring Guide

Inputs and outputs of audio devices are symmetric or asymmetric. The main advantage of the symmetric lines is the better protection against the noise, therefore they are widely used in the professional audio industry. Symmetric audio is most often referred to as balanced audio, as opposed to asymmetric, which is referred to as unbalanced audio. Lighthouse products are usually built with 5-pole Phoenix connectors, so we would like to help users assemble their own audio cables. See the most common cases below.

**ATTENTION!** Symmetric and asymmetric lines can be linked with passive accessories (e.g. special cables), but in this case half of the line level is lost.

**ATTENTION!** There are numerous types of regularly used connector and cable types to connect audio devices. Please always make sure that a connector or cable fits your system before use.

**ATTENTION!** Never join the phase-inverted (negative, cold or \(-\)) poles (either right and left) to the ground or to each other on the output side, as this can damage the unit.

**INFO:** Use a galvanic isolation in case of a ground loop.

12.8.1. Audio Ports

The Pinout of the 5-pole Phoenix Connector

12.10. Release Notes of the Firmware Packages

v1.2.1b8
Release date: 2022-03-09

New feature:
- From this version on, MX2M-4HDMI20-IB-E, MX2M-4HDMI20-OB-E, MX2M-4OPTJ-IB-E, MX2M-4OPTJ-OB-E, and MX2M-DH-4DP12-IB-E boards are supported.

Known issue:
- Resetting a port on an MX2M-AUX-DANTE-32CH to its factory default settings has no effect.
- The left and right channels of the stereo audio signal corresponding to a Dante input port on the MX2M-AUX-DANTE-32CH board are swapped.

v1.2.0b6
Release date: 2021-05-13

New feature:
- From this version on, MX2M-4HDMI20-IB, MX2M-4HDMI20-OB, MX2M-4OPTJ-IB, MX2M-4OPTJ-OB, and MX2M-DH-4DP12-IB boards support DisplayID extension in the EDID.

Bugfix:
- Fixed a bug that resulted in wrong board information being displayed in LDC after a firmware upgrade.
- Fixed a bug that resulted in wrong nominal voltage values being reported for the MX2M-AUX-DANTE-32CH board on the Health pages of the graphical user interface.
- Fixed a bug that required to manually alter the secondary mini crosspoint on the output of an MX2M-AUX-DANTE-32CH when the main crosspoint was modified.
- Fixed a bug that resulted in the matrix not being restarted after restoring the configuration.
- Fixed a bug that resulted in invalid backup file being uploaded to the matrix switcher.
- Fixed a bug that caused the embedded web and the LDC application to generate an invalid backup file.
- Fixed a bug that resulted in escape backslashes being added to the channel labels with opening or closing brackets on an MX2M-AUX-DANTE-32CH board.
- Fixed a bug that prevented the channel label on an MX2M-AUX-DANTE-32CH board from being updated through the graphical user interface.
- Fixed a bug that prevented the restore operation issued through the graphical user interface from being completed.
- Added the Switch to all command to input ports of the MX2M-AUX-DANTE-32CH board on the graphical user interface.
**Applied firmware package:** v1.2.1  |  **LDC software:** v2.5.15b2

**Known issue:**
- If the matrix switcher is set up to use dynamic IP address allocation through DHCP and a different IP address is assigned to it by the DHCP server when the lease is renewed, the matrix switcher remains accessible through both the old and the new IP address.
- Factory resetting the individual ports does not work. Moreover, after factory resetting an individual board might not reset some parameters.
- The update of MX2M-4OPT J-IB and MX2M-4OPT J-OB boards might fail if the optical cables are connected during the update process. Should this be the case, unplugging the optical cables and restarting the matrix resolves the problem and the update gets finished successfully.
- For video signals having a width of 4096 pixels or more, the video format returned is invalid. Such video signals are passed through the matrix switcher without any problem, it is just the format indication that is invalid.
- The information on the color space of the video signal arriving at the input port might not get propagated to the output port. This results in invalid color space information in the output video signal. Manually triggering a hotplug event on the input restores the valid color space information on the output.

**v1.1.0b13**
**Release date:** 2021-02-15

**New feature:**
- From this version on, the matrix firmware supports the MX2M-AUX-DANTE-32CH board.
- From this version on, CEC is supported by the video IO boards.

**Bugfix:**
- Fixed a bug that caused some sink devices (displays) to fail to synchronize to the video stream if they are fed through an HDMI20-OPTJ-RX90 from an MX2M-4OPTJ-OB board.
- Fixed a bug that caused some ports on the MX2M-4OPTJ-OB output board not to function correctly.

**Known issue:**
- The channel labels of the input and output ports on the MX2M-AUX-DANTE-32CH board are not reset when the Dante device corresponding to the respective board is factory reset from the Dante Controller.
- The matrix might report invalid link status for the Primary and Secondary interfaces on an MX2M-AUX-DANTE-32CH board.
- It might happen that, after switching on and off the input signal many times the input port on a video input board erroneously reports a valid HDMI signal.
- When changing the source for an output port on the MX2M-AUX-DANTE-32CH board, the secondary mini crosspoint on the respective output also has to be altered to get the audio content corresponding to the new source out from the board.
- The manual showing the usage of PriLinkType and SecLinkType properties erroneously states that the accepted values are numbers. Use the strings corresponding to the values to set the link type.
- After a firmware upgrade, wrong board information is displayed in LDC. Restarting LDC resolves the issue.
- Wrong nominal voltage values are reported for the MX2M-AUX-DANTE-32CH board on the Health pages of the graphical user interface.

**v1.0.0b33**
**Release date:** 2020-10-02

**Known issue:**
- Color space conversion to YCbCr 4:2:2 on the output might result in invalid picture if the color space format of the incoming video signal is 4:2:0.
- The audio embedded by a video output board (e.g. MX2M-4HDMI20-OB) into the output HDMI stream cannot be decoded by a less error resilient player device (like a HDMI receiver). The same audio is played back seamlessly and without any problem by a regular television.
- The audio cannot be de-embedded from the input video on an MX2M-4HDMI20-IB or MX2M-4OPTJ-IB board when the source of the input video is an output board and the respective output is set to embed audio from the Audio layer.
- It might take an unusually long time for some sink devices (displays) to synchronize to the video stream if they are fed through an HDMI20-OPTJ-RX90 from an MX2M-4OPTJ-OB board.
- The output video stream might contain wrong audio channels when zero or one channel is selected for embedding in the output video stream on video output boards.
- Presets created via the front panel are displayed as audio presets on the embedded web and in the LDC application.
- The audio input ports on an MX2M-AUX-8AUDIO board cannot be muted.
12. Appendix

Hybrid Modular Matrix Switcher series – User’s Manual

Applied firmware package: v1.2.1 | LDC software: v2.5.15b2

12.11. Hashtag Keyword List

This user’s manual contains keywords with hashtags (#) to help you find the relevant information as quick as possible.

The format of the keywords is the following:

#<keyword>

The usage of the keywords: use the Search function (Ctrl+F / Cmd+F) of your PDF reader application, type the # (hashtag) character and the wished keyword.

The #new special keyword indicates a new feature/function that has just appeared in the latest firmware or software version.

Example

#dhcp

This keyword is placed at the DHCP (dynamic IP address) setting in the front panel operation, the Lightware Device Controller (LDC) and the LW3 programmer’s reference section.

The following list contains all hashtag keywords placed in the document with a short description belonging to them. The list is in alphabetical order by the hashtag keywords.

<table>
<thead>

12.12. Further Information

Limited Warranty Statement

1. Lightware Visual Engineering LLC (Lightware) warrants to all trade and end user customers that any Lightware product purchased will be free from manufacturing defects in both material and workmanship for three (3) years from purchase unless stated otherwise below. The warranty period will begin on the latest possible date where proof of purchase/delivery can be provided by the customer. In the event that no proof can be provided (empty 'Date of purchase' field or a copy of invoice), the warranty period will begin from the point of delivery from Lightware.

1.1. 25G and MODEX product series will be subject to a seven (7) year warranty period under the same terms as outlined in this document.

1.2. If during the first three (3) months of purchase, the customer is unhappy with any aspect of a Lightware product, Lightware will accept a return for full credit.

1.3. Any product that fails in the first six (6) months of the warranty period will automatically be eligible for replacement and advanced replacement where available. Any replacements provided will be warranted for the remainder of the original unit's warranty period.

1.4. Product failures from six (6) months to the end of the warranty period will either be repaired or replaced at the discretion of Lightware. If Lightware chooses to replace the product, then the replacement will be warranted for the remainder of the original unit's warranty period.

2. The above-stated warranty and procedures will not apply to any product that has been:

2.1. Modified, repaired or altered by anyone other than a certified Lightware engineer unless expressly agreed beforehand.

2.2. Used in any application other than that for which it was intended.

2.3. Subjected to any mechanical or electrical abuse or accidental damage.

2.4. Any costs incurred for repair/replacement of goods that fall into the above categories (2.1., 2.2., 2.3.) will be borne by the customer at a pre-agreed figure.

3. All products to be returned to Lightware require a return material authorization number (RMA) prior to shipment, and this number must be clearly marked on the box. If an RMA number is not obtained or is not clearly marked on the box, Lightware will refuse the shipment.

3.1. The customer will be responsible for in-bound and Lightware will be responsible for out-bound shipping costs.

3.2. Newly repaired or replaced products will be warranted to the end of the originally purchased product's warranty period.
